First Semester 2010, Status Report

Dear Mr. Plunkett:

Presented herein is the First Semester 2010, Status Report prepared for former Thrifty Oil Co. (Thrifty) Station #063 located at 6125 Telegraph Avenue, Oakland, California (**Figure 1**). This report includes the results of the semi-annual groundwater-monitoring program and ongoing remediation conducted during the First Semester 2010. Thrifty has retained the services of Earth Management Company (EMC) to conduct semi-annual monitoring and sampling, and remediation system operation and maintenance activities at this site.

On June 9, 2010, Thrifty submitted a *Continuous 5-Day Mobile High Vacuum Dual Phase Extraction Report and Workplan to Conduct a Continuous 30-Day Mobile High Vacuum Dual Phase Extraction Event* (HVDPER/WP). The HVDPER/WP summarized the results of the continuous 5-day mobile High Vacuum Dual Phase Extraction (HVDPE) event conducted from May 3 through 8, 2010, and recommended an additional continuous 30-day HVDPE event to remove residual contamination from the subsurface soils at the site. As soon as Thrifty receives approval from the ACHCS, we will schedule the continuous 30-day HVDPE event.

I declare, under penalty of perjury, that the information and/or recommendations contained in this document are true and correct to the best of my knowledge.

Should you have any questions regarding this report, please contact Simon Tregurtha (562) 921-3581 Ext. 260 or the undersigned at Ext 390.

Groundwater Monitoring

Depth to groundwater is measured in each monitoring well on a semi-annual basis. Groundwater monitoring well locations are presented in **Figure 1.** A groundwater elevation contour map based on the May 19, 2010, groundwater monitoring data is presented in **Figure 2.** The groundwater flow direction is to the west at an approximate gradient of 0.053 feet/foot.

Semi-Annual Groundwater Sampling

As part of the ongoing groundwater-monitoring program, groundwater samples were obtained from monitoring wells MW-1, MW-3, MW-4, MW-5, MW-6, MW-7, and MW-8 on May 19, 2010. Groundwater samples were collected by Earth Management Company (EMC) and delivered in a chilled state following strict Chain-of-Custody procedure to a state-certified laboratory. The samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) by EPA Method 8015B, and for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) and other oxygenates by EPA Method 8260B. Laboratory analytical results are provided in the **Summary Table, Table 1** and **Table 2**. Copies of the Field Status Reports for groundwater sampling are presented in **Appendix A**, and copies of the laboratory analytical reports are contained in **Appendix B**.

Laboratory results for the groundwater samples collected on May 19, 2010 indicate that the highest concentrations of TPHg and MTBE were detected in well MW-7 at 3,360 micrograms per liter (µg/L) and 12 µg/L, respectively. The highest concentrations of benzene was detected in well MW-4 at 50 µg/L and TBA was detected in only one well (MW-4) at 50 µg/L. All other oxygenated compounds were not detected at or above laboratory detection limits in any of the wells.

TPHg, benzene, MTBE, and TBA isoconcentration maps were prepared using results from the May 19, 2010 groundwater sampling and monitoring event, and the results are presented in **Figures 3, 4, 5**, and **6,** respectively.

In general, First Semester 2010 concentrations in wells MW-3, MW-4, MW-5 and MW-7 decreased significantly when compared to Second Semester 2009 concentrations (see **Summary Table-Second Semester 2009 vs First Semester 2010**). Concentrations in wells MW-1, MW-6 and MW-8 were non-detect for all hydrocarbon constituents in both the First Semester 2010 and Second Semester 2009. Thrifty believes that the significant decrease in groundwater concentrations as noted above were due to the ongoing groundwater remediation conducted at the site and the continuous 5-Day mobile high vacuum dual phase extraction (HVDPE) event conducted from May 3, 2010 through May 8, 2010.

Remediation Status

Site remedial activities were initiated in April 1991. Currently, the remediation system consists of a Groundwater Treatment System that extracts groundwater from monitoring wells MW-3 and MW-4 with treatment utilizing activated carbon. System operational data is included in **Table 3.** Copies of the Field Status Reports for groundwater remediation system are presented in **Appendix C**, and copies of the laboratory analytical reports are contained in **Appendix D**. During the current reporting period (from December 28, 2009 through June 15, 2010), the groundwater treatment system processed approximately 26,920 gallons (which includes the 5,720 gallons removed and treated during the continuous 5-day HVDPE event conducted from May 3, 2010 through May 8, 2010) of groundwater and has treated approximately 3,332,369 gallons of groundwater since start-up (April 1991). The system was upgraded in the Second Quarter 2005, when a pump was replaced in well MW-3 and MW-4 was added to the extraction well array.

Other Activities

According to the *Underground Storage Tank Removal Report* prepared by Pacific Environmental Group, Inc. and dated August 31, 1998, 977.22 tons of hydrocarbon impacted soil was removed from the site during underground removal activities completed in February and March 1998. The soils were transported to TPS Technologies, Inc. located in Adelanto, California for final disposal.

In a letter received by Thrifty dated December 7, 2005, the Alameda County Health Care Services (ACHCS) requested site information including depth to water, groundwater flow direction, dissolved constituents concentrations, well screen levels, plume stability, and if active remediation was occurring onsite. Thrifty provided the requested information on January 10, 2006. The ACHCS also requested that a site conceptual model (SCM) be prepared for the site; Thrifty uploaded the SCM to the ACHCS FTP website and to Geotracker on April 26, 2006.

In a letter received by Thrifty dated October 24, 2006, the ACHCS requested a Revised SCM (RSCM) and an offsite investigation workplan (Workplan). On behalf of Thrifty, Equipoise Corporation uploaded the RSCM and Workplan to the California Geotracker website and the ACHCS FTP website on November 29, 2006. Subsequently, the ACHCS sent a letter to Thrifty dated December 21, 2006 approving the Workplan for down-gradient off-site assessment. On February 22, 2007, two downgradient groundwater monitoring wells (MW-7 and MW-8) were installed on the adjacent property located to the south of the Site by Test America of Rancho Cordova, California under the supervision of Equipoise Corporation. Results of the additional site assessment were presented in a *Site Assessment/Well Installation Report,* submitted to ACHCS on April 5, 2007.

In an effort to reduce hydrocarbon contamination in the soil and groundwater beneath the site and to move the site towards closure, Thrifty proposed the implementation of a continuous 5-day high vacuum dual-phase extraction (HVDPE) event (with possible additional events to be performed based upon results). The HVDPE was proposed in the Second Quarter 2008 Status Report dated July 2, 2008 and at that time Thrifty indicated that it would submit a workplan detailing the proposed Interim Remedial Action upon your approval. The ACEHS did not respond to Thrifty's proposal and on September 2, 2008 (after waiting 60-days and under the 60-day rule) Thrifty submitted a Remedial Action Plan (RAP). The RAP proposed performing a five consecutive day (24-hours/day) multi-phase extraction (MPE) event to reduce the hydrocarbon concentrations beneath the site. As an alternative to the HVDPE event proposed in the Second Quarter 2008 Status Report, the RAP proposed to utilize the existing groundwater treatment system in combination with a mobile soil vapor extraction (SVE) unit to facilitate the MPE event. The proposed MPE event would be as technically effective as the HVDPE and much more cost-effective by utilizing the existing system for treatment and discharge of groundwater to the sewer (rather than incurring Baker Tank and offsite disposal costs).

In a letter dated December 29, 2008 (the Letter) the Alameda County Health Care Services (ACHCS) indicated that they would not approve the RAP until several outstanding issues have been addressed, including delineating the downgradient extent of the contamination plume and evaluating the associated

human health risks.

On February 4, 2009, Thrifty submitted a Response Letter that addressed several statements and comments included in Item 4 of the Technical Comments Section of the December 29, 2008 ACHCS Letter. The Response Letter included clarification of statements made by both Thrifty and the ACHCS regarding peak concentrations detected in the influent stream of the groundwater extraction system.

On February 18, 2009, Thrifty submitted an *Additional Site Assessment Workplan* (ASAW). The Workplan was also prepared in response to the December 29, 2008 ACHCS Letter, which requested that Thrifty propose a scope of work to: (1) evaluate the lateral and vertical extent of the source area soil contamination; (2) evaluate the lateral and vertical extent of the dissolved phase plume downgradient of the site; (3) collect soil vapor samples to assess the potential risk to on-site and offsite receptors. To comply with the directives in the Letter, the ASAW proposed collecting four soil vapor samples (SV-1 through SV-4) at approximately 3-feet below ground surface (bgs), advancing four soil borings (SB-1 through SB-4) to approximately 30-feet bgs, and installing one offsite groundwater monitoring well (MW-9) to approximately 30-feet bgs.

On June 9, 2010, Thrifty submitted a *Continuous 5-Day Mobile High Vacuum Dual Phase Extraction Report and Workplan to Conduct a Continuous 30-Day Mobile High Vacuum Dual Phase Extraction Event* (HVDPER/WP). The HVDPER/WP summarized the results of the continuous 5-day mobile HVDPE event and recommended an additional continuous 30-day HVDPE event conducted from May 3, 2010 through May 8, 2010 to remove residual contamination from the subsurface soils at the site. During the continuous 5-day HVDPE event, 15.80 pounds of vapor hydrocarbons were removed and destroyed and 5,720 gallons of groundwater were removed and discharged through the existing groundwater treatment system. As soon as Thrifty receives approval from the ACHCS, we will schedule the continuous 30-day HVDPE event.

Activities Planned for Second Semester 2010

The following activities are planned for next reporting period (Second Semester 2010):

- Continue semi-annual groundwater monitoring, sampling; and reporting;
- Continue operations of the groundwater remediation system; and
- Upon receiving ACHCS approval, Thrifty will implement the scope of work outlined in the June 9, 2010 HVDPE/WP
