PORT OF OAKLAND

February 5, 1996

Jennifer Eberle
Hazardous Materials Specialist
Alameda County Health Care Services Agency
1131 Harbor Bay Parkway, 2nd Floor
Alameda, CA 94502

Dear Ms. Eberle:

SUBJECT: GROUNDWATER MONITORING AND SAMPLING REPORT, BUILDING C401, 2277 7TH ST. (Port Contract # 94265)

Enclosed please find the groundwater monitoring and sampling reports for the third and fourth quarters of 1995 for Building C-401, 2277 7th St. Alisto Engineering Group prepared the report on behalf of the Port.

A summary of free product removal is also included in the report.

If you have any questions, please feel free to contact me at 272-1220.

Sincerely,

Dan Schoenholz
Associate Environmental Scientist

GROUNDWATER MONITORING AND SAMPLING REPORT
THIRD AND FOURTH QUARTER 1995

Port of Oakland
Building C-401
2277 Seventh Street
Oakland, California

Project No. 10-270-03-002

January 31, 1996

INTRODUCTION

This report presents the results and findings of the groundwater monitoring and sampling conducted by Alisto Engineering Group at the Port of Oakland, Building C-401, 2277 Seventh Street, Oakland, California for the third and fourth quarter 1995. A site vicinity map is shown on Figure 1.

The third quarter groundwater sampling was performed on September 6, 1995. Monitoring Well MW-4 and MW-5 were resampled on September 11, 1995 because the sample labels did not remain adhered to the sample containers. Monitoring Wells MW-1, MW-3, and MW-8 were not sampled due to the presence of liquid-phase petroleum hydrocarbons. The fourth quarter groundwater sampling was performed on September 28, 1995 concurrently with the sampling of Wells MW-1, MW-2, and MW-3 at the adjacent Dongary Investments property at 2225 Seventh Street, Oakland.

FIELD PROCEDURES

Field activities were performed in accordance with the procedures and guidelines of the Alameda County Health Care Services Agency and the California Regional Water Quality Control Board, San Francisco Bay Region.

Before purging and sampling, the groundwater level in each well was measured from a permanent mark on top of the casing to the nearest 0.01 foot using an electronic sounder. The depth to groundwater and top of casing elevation data were used to calculate the groundwater elevation in each well in reference to mean lower low water. The survey data and groundwater elevation measurements collected to date are presented in Table 1. Data collected during the coordinated monitoring with the Dongary Investments property are presented in Table 2. A summary of the liquid-phase hydrocarbons removed from Monitoring Wells MW-1 and MW-3 at the Port of Oakland property is presented in Table 3.

Before sample collection, each well was purged of 3 casing volumes while recording field readings of pH, temperature, and electrical conductivity. Groundwater samples were collected for laboratory analysis by lowering a bottom-fill, disposable bailer to just below the

collected during the coordinated monitoring with the Dongary Investments property are presented in Table 2. A summary of the liquid-phase hydrocarbons removed from Monitoring Wells MW-1 and MW-3 at the Port of Oakland property is presented in Table 3.

Before sample collection, each well was purged of 3 casing volumes while recording field readings of pH, temperature, and electrical conductivity. Groundwater samples were collected for laboratory analysis by lowering a bottom-fill, disposable bailer to just below the water level in each well. The samples were transferred from the bailer into laboratory-supplied containers. The field procedures for groundwater monitoring well sampling and the water sampling field survey forms are presented in Appendix A.

SAMPLING AND ANALYTICAL RESULTS

The groundwater samples were analyzed by Clayton Environmental Consultants, a state-certified laboratory, for the following:

WELL ID	ANALYTE			
	TPH-G	BTEX	TPH-D	TPH-O
MW-1	---	---	---	---
MW-2	X	X	X	X
MW-3	---	---	---	---
MW-4	X	X	X	X
MW-5	X	X	X	X
MW-6	X	X	X	X
MW-7	X	X	X	X
MW-8	---	---	---	---

TPH-G = Total petroleum hydrocarbons as gasoline using EPA Method 8015
BTEX = Benzene, toluene, ethylbenzene, and total xylenes using EPA Method 8020
TPH-D = Total petroleum hydrocarbons as diesel using EPA Method 8015 (modified)
TPH-O = Total petroleum hydrocarbons as oil using EPA Method 8015 (modified)

Monitoring Wells MW-1, MW-3, and MW-8 were not sampled due to the presence of liquid-phase hydrocarbons.

The results of monitoring and laboratory analysis of the groundwater samples for this and previous events are summarized in Table 1. The potentiometric groundwater elevations as interpreted from the results of the September 6 and 28, 1995 monitoring events are shown on Figures 2 and 3. The results of groundwater analysis are also shown on Figures 4 and 5.

The field procedures for chain of custody documentation, laboratory report, and chain of custody record are presented in Appendix B.

RESULTS AND FINDINGS

The findings of the third and fourth quarter 1995 groundwater monitoring and sampling events are summarized as follows:

- Liquid-phase hydrocarbons were observed in Port of Oakland Monitoring Wells MW-1, MW-3, and MW-8 at thicknesses ranging from 0.12 to 5.8 feet. A hydrocarbon sheen was observed in MW-6 during the September 6, 1995 monitoring event.

- Groundwater elevation data from the Port of Oakland monitoring wells indicate a gradient ranging from 0.01 to 0.03 foot per foot in a general northerly direction across the site.

- Groundwater elevation data collected on September 28, 1995 from the three wells at the Dongary Investments property indicate a reversal of gradient direction as compared to the results of previous monitoring events. This discrepancy is attributed to an erroneous measurement of depth to water in MW-1 (Groundwater Technology, Inc., Third Quarter 1995 Groundwater Monitoring and Sampling Report, November 29, 1995).

- Analysis of samples collected from the monitoring wells at the Port of Oakland site on September 6 and 28, 1995 detected the following:

    - TPH-G at concentrations of up to 120, 210, and 2400 micrograms per liter (ug/l) in the samples collected from Monitoring Wells MW-2, MW-4, and MW-6.

    - TPH-D at concentrations of up to 8400 and 390 ug/l in the samples collected from MW-6 and MW-7.

    - TPH-O at concentrations ranging from 400 to 8000 ug/l in the monitoring wells sampled.

    - Benzene, toluene, ethylbenzene, and total xylenes at concentrations of up to 12, 0.9, 7.5, and 4.2 micrograms per liter (ug/l) in the sample collected from MW-6. Benzene was also detected at concentrations of up to 23 ug/l in the sample collected from MW-4.

- Analysis of samples collected from the monitoring wells at the Dongary Investments site on September 28, 1995 detected the following:

    - TPH-G at concentrations of 250 and 51 ug/l in the samples collected from Monitoring Wells MW-2 and MW-3.

- TPH-D, benzene, toluene, ethylbenzene, and total xylenes were not detected above the reported detection limit in any of the samples. The groundwater samples were not analyzed for TPH-O.

ND	Not detected above reported detection limit
D&M	D&M Laboratories
CEC	Clayton Environmental Consultants, Inc.

NOTES:

(a) Top of casing elevations surveyed to the nearest 0.01 foot relative to mean lower low water (3 2 feet below mean sea level), Port of Oakland datum

(b) Groundwater elevations expressed in feet relative to Port of Oakland datum and corrected assuming a specific gravity of 0.75 for the separate-phase product.

(c) Blind duplicate.

(d) Purgeable hydrocarbons quantitated as gasoline do not match typical gasoline pattern.

(e) Unidentified hydrocarbons present in oil range; quantitation based on oil.

(f) Unidentified hydrocarbons present in diesel range; quantitation based on diesel.

(g) Travel blank.

NOTES:

(a) Casing elevations surveyed to the nearest 0.01 foot relative to mean lower low water (3.2 feet below mean sea level) Port of Oakland datum.

(b) Groundwater elevations adjusted assuming a specific gravity of 0.75 for the liquid-phase hydrocarbons.

(c) The estimated amount bailed is approximately 75% product and 25% water.

APPENDIX A

FIELD PROCEDURES FOR GROUNDWATER MONITORING WELL SAMPLING AND WATER SAMPLING FIELD SURVEY FORMS

FIELD PROCEDURES
FOR
GROUNDWATER MONITORING WELL SAMPLING

Groundwater Level Measurement

Before commencing groundwater sampling, the groundwater level in each well was measured from a marked survey reference point at the top of the well casing. Groundwater in each well was monitored for free-floating product or sheen. The depth to groundwater was measured to an accuracy of 0.01 foot from the top of the PVC well casing using an electronic sounder.

Groundwater Monitoring Well Sampling

To ensure that the groundwater samples were representative of the aquifer, the wells were purged of 3 well casing volumes before sample collection. This purging was accomplished using a clean bailer or pump.

The groundwater samples were collected using a disposable bailer, and then transferred into laboratory-supplied containers. Care was taken to avoid turbulence when transferring the water samples, and all volatile analysis vials were filled so that no air bubbles were trapped. The sampling technician wore nitrile gloves at all times during purging and well sampling. The samples were labeled with the well number, site identification, date and time of sample collection, and sampler's initials, and transported in an iced cooler maintained at 4 degrees Centigrade to Clayton Environmental Consultants, a state-certified laboratory, following preservation and chain of custody protocol.

APPENDIX B

FIELD PROCEDURES FOR CHAIN OF CUSTODY DOCUMENTATION, LABORATORY REPORT, AND CHAIN OF CUSTODY RECORD

FIELD PROCEDURES
FOR
CHAIN OF CUSTODY DOCUMENTATION

All samples were handled in accordance with the California Department of Health Services guidelines. Samples were labeled in the field and immediately stored in coolers and preserved with blue ice for transport to a state-certified laboratory for analysis.

A chain of custody record accompanied the samples, and included the site and sample identification, date and time of collection, analysis requested, and the name and signature of the sampling technician. When transferring possession of the samples, the transferee signed and dated the chain of custody record.

Client Ref.: 10-270-01-004
Clayton Project No.: 95091.08

Dear Mr. Nagle:

Attached is our analytical laboratory report for the samples received on September 8, 1995. Also enclosed is a copy of the Chain-of-Custody record acknowledging receipt of these samples.

Please note that any unused portion of the samples will be discarded after October 22, 1995, unless you have requested otherwise.

We appreciate the opportunity to assist you. If you have any questions concerning this report, please contact Suzanne Haus, Client Services Supervisor, at (510) 426-2657.

Sincerely,

Harriotte A. Hurley, CIH
Director, Laboratory Services

Mr. Dale Swain
ALISTO ENGINEERING GROUP
1575 Treat Blvd., Suite 201
Walnut Creek, CA 94598

Client Ref.: 10-270-03-003
Clayton Project No.: 95094.01

Dear Mr. Swain:

Attached is our analytical laboratory report for the samples received on September 29, 1995. Also enclosed is a copy of the Chain-of-Custody record acknowledging receipt of these samples.

Please note that any unused portion of the samples will be discarded after November 15, 1995, unless you have requested otherwise.

We appreciate the opportunity to assist you. If you have any questions concerning this report, please contact Suzanne Haus, Client Services Supervisor, at (510) 426-2657.

Sincerely,

Harriotte A. Hurley, CIH
Director, Laboratory Services
San Francisco Regional Office

TPH-D = Extractable petroleum hydrocarbons from C10 to C20 quantitated as diesel.
b Detection limit increased due to presence of heavier hydrocarbons.
a Unidentified hydrocarbons present in diesel range; quantitation based on diesel.
