

8/23/2017 Phone Log- RO14 BP #11132. 3201 35<sup>th</sup> Ave., Oakland

Duration: Approximately 40 minutes

Returned a voice mail phone call from Megan Smoley (Arcadis) regarding my comments on the recently submitted work plan. I asked for additional soil vapor probes and relocation of one proposed monitoring well.

We agreed on three additional vapor probes- 2 along Suter St. and one along 35<sup>th</sup> Ave. and clarified the location of the proposed monitoring well on Suter.

We clarified the depth of sample recovery to be consistent with the LTCP, and I agreed to one soil vapor probe for each installed instead of the proposed cluster.

I also requested that a well status determination be conducted for the potential well on Arkansas to determine if tenant & owner are aware of a well and if the well was in service. I provided the site address and the address of the property owner.
