SUBJECT: Second Semi Annual Groundwater Monitoring Report (2004)
1310 14th Street
Oakland, California

RECEIVED
FEB 23 2005
Alameda County
Health Agency

Dear Mr. Chan:

Enclosed please find one copy of the 2004 Second Semi Annual Groundwater Monitoring Report for the above-referenced site. This report describes the groundwater monitoring activities conducted at the site during November 2004.

Should you have any questions please do not hesitate to contact the undersigned at (714) 240-4873.

Sincerely,

ENVIRONMENTAL COST MANAGEMENT

1 INTRODUCTION

As of August 2003, Nestlé USA, Inc. (Nestlé) has retained Environmental Cost Management (ECM) to provide environmental services for the former Nestlé facility at 1310 14th Street, Oakland, California (the Site, Figure 1). Pursuant to the agreement between Nestlé, Alameda County Health Agency (ACHA), and the Regional Water Quality Control Board (RWQCB), quarterly groundwater monitoring has been replaced by semi-annual groundwater monitoring starting October 2002. ECM conducted the second semi-annual 2004 groundwater monitoring event on November 16 and 17, 2004. The purpose of this Groundwater Monitoring Report is to describe field activities and to discuss analytical results.

2 SCOPE OF SERVICES

2.1 REMEDIATION SYSTEM

During the third quarter of 1997, a multiphase extraction (MPE) remediation system was installed at the Site. The groundwater portion of the MPE system consisted of two 200-pound liquid phase carbon vessels in parallel, followed by two 200-pound liquid phase carbon vessels in parallel, followed by two 1,000-pound liquid phase carbon vessels in series. The vapor portion of the MPE system consisted of air/water separators, and a thermal oxidizer, which burned extracted soil-vapors and vapor-phase hydrocarbons stripped from groundwater and recovered product.

The MPE system began operation on August 28, 1997, and was upgraded from June through September 1998. Operation of the MPE system was discontinued in June 2000. The monitoring results through June 19, 2000 for the MPE water and vapor treatment systems are summarized in previous quarterly groundwater monitoring reports.

Based on Treatment System data, approximately 621 pounds of hydrocarbons have been removed from extracted water, and approximately 538 pounds of non-aqueous phase liquid (NAPL) have been removed by the oil/water separator. The estimated amount of NAPL has fluctuated due to accumulation of water in the product storage tank. An estimated 9,691 pounds of hydrocarbons have been removed from extracted soil vapor. An estimated combined total of 10,850 pounds of hydrocarbons has been removed and treated since system installation.

Per discussions with the ACHA and RWQCB in November 1999, it was decided that the remediation system would operate through the end of the second quarter 2000. During the first quarter of 2001, the groundwater monitoring results were compared between the periods when the remediation system was operated (first and second quarters 2000) and when it was not operated (third and fourth quarters 2000). Groundwater monitoring results following shutdown of the MPE system in June 2000 indicated that dissolved phase hydrocarbon levels have stabilized at the Site. Concentration trends and other data were presented in ETIC's *Comprehensive Site Characterization Report*, dated January 2001.

2.2 REGULATORY STATUS

Information presented in ETIC's *Comprehensive Site Characterization Report* was discussed in a meeting attended by Nestlé, ETIC, the ACHA, and the RWQCB on June

12, 2001. As discussed during this meeting, Nestlé submitted a request for case closure for the Site in January 2002.

Per the October 21, 2002 letter from the ACHA, final case closure will be considered for the Site after two years of semi-annual monitoring of 11 selected wells [MW-25 through MW-30, MW-32, MW-100, PR-76, 29 (CC1), 30 (CC2)]. Well PR-76 was substituted for well MW-5 in the original set of 11 monitoring wells proposed for future semi-annual sampling, as MW-5 was properly abandoned.

In addition, the letter granted approval for the abandonment of all but the 11 monitoring wells at the Site. As of January 2003, further remedial activities are not currently required, contingent on the results of the required semi-annual monitoring of the 10 wells designated to remain as part of future groundwater monitoring at the Site.

3 FIELD PROCEDURES

3.1 NAPL GAUGING

Following discussions with the ACHA and the RWQCB in June 2001, monthly NAPL gauging at the Site was discontinued in September 2001. As part of the semi-annual groundwater monitoring, each monitoring well to be sampled is gauged for depth to water and NAPL thickness prior to purging and sampling. During the November 2004 sampling event, ECM did not detect any NAPL in the wells gauged.

3.2 PURGING AND SAMPLING OF GROUNDWATER

After depths to groundwater were measured, ECM purged selected wells using a dedicated polyvinylchloride (PVC) tube attached to an aboveground pump. Approximately 3 well casing volumes of water were removed from each well. Wells that dewatered prior to removal of 3 casing volumes were allowed to recharge. The temperature, pH, and electrical conductance of the purged water were recorded at approximately each well casing volume as each well was purged. When the parameters were stable (less than 10 percent change from the previous reading for temperature and electrical conductance, and less than 0.1 pH unit change for pH), purging was stopped and groundwater samples were collected. The samples were collected from each well with factory-cleaned disposable polyethylene bailers and poured into 40-ml glass VOA vials and 1-liter amber glass jars and placed in an ice-filled cooler. All samples were handled and transported under chain of custody.

ECM submitted the samples to the Nestlé Quality Assurance Laboratory, where they were analyzed for Total Petroleum Hydrocarbons as gasoline (TPH-g) and as diesel (TPH-d) by the California DOHS method described in the October 1989 LUFT Field Manual; for benzene, toluene, ethylbenzene, and xylenes (BTEX) and methyl *t*-butyl ether (MTBE) by USEPA Method 8020; and for halogenated volatile organic compounds (HVOCs) by USEPA Method 8021.

4 SUMMARY OF RESULTS

4.1 NAPL GAUGING AND MONITORING

NAPL monitoring data for a representative number of wells monitored between November 1993 and August 2001 were summarized in previous ETIC reports. Gauging results indicated that the MPE system has been effective and has decreased the amount of NAPL in the subsurface. The results for some of the wells that have historically contained NAPL are summarized below. In addition to the data provided below, product thickness was also measured in PR-64 on October 29, 2001, January 28, 2002 and April 29, 2002 at 0.15 feet, 0.70 feet and 0.62 feet, respectively. Prior to sampling the monitoring wells CC-1, MW-25, MW-26, MW-27, MW-28, MW-29 and MW-100, the product thickness was measured during the November 2004 sampling event. However, no product was observed in any of the groundwater monitoring wells. Product has not been observed in the wells since August 2001.

Well	Maximum NAPL Thickness (feet)						
	February 1998	November 1998	May 1999	February 2000	December 2000	January 2001	August 2001
PR-21	4.28	Dry	<0.01	<0.01	Dry	Dry	Dry
PR-22	4.54	<0.01	<0.01	<0.01	<0.01	<0.01	<0.01
PR-26	3.39	<0.01	<0.01	<0.01	<0.01	<0.01	<0.01
PR-34	3.18	<0.01	<0.01	<0.01	<0.01	<0.01	<0.01
PR-48	1.30	0.04	<0.01	<0.01	0.12	0.07	<0.01
PR-58	4.25	0.03	0.15	<0.01	0.07	<0.01	0.06
PR-64	2.93	<0.01	0.06	<0.01	0.49	0.48	0.60
MW-23	0.51	<0.01	0.63	<0.01	0.40	0.36	0.48
MW-24	0.25	0.25	1.26	<0.01	0.41	0.41	0.74

4.2 DEPTH TO GROUNDWATER MONITORING WELLS

On November 16, 2004, the depth to groundwater in the gauged monitoring wells ranged from 4.72 (CC-1) to 9.17 (MW-100) feet, and groundwater elevations ranged from 5.47 (MW-25) to 6.03 (MW-32) feet above mean sea level (Table 1). A groundwater elevation contour map for the November 2004 sampling event is shown in Figure 2. The direction of groundwater flow in November 2004 was toward the northwest, with a gradient ranging from 0.005 feet per foot to 0.010 feet per foot.

Field documentation is provided in Appendix A.

4.3 ANALYSES OF SAMPLES

The analytical results for the groundwater samples collected on November 17, 2004 are presented in Table 2, along with previous results. Analytical results along with sampling locations are shown in Figure 3. Laboratory analytical reports and chain-of-custody documentation are included in Appendix B.

Analytical results for samples collected on November 17, 2004 suggested that concentrations remained relatively stable in most of the monitoring wells. The

concentration changes specific to monitoring wells are discussed below, excluding results that were below laboratory detection limits.

Monitoring Well MW-25: 1,1-Dichloroethane (1,1-DCA) concentrations increased in MW-25 from 5.1 µg/L to 6.7 µg/L as compared to the previous semi-annual event. 1,2-Dichloroethane (1,2-DCA) concentrations increased from 18 µg/L to 25 µg/L from April 27, 2004 to November 17, 2004, respectively. Methyl-tertiary-butyl-ether (MTBE) increased from 5.2 µg/L to 6.1 µg/L when compared to the last quarterly monitoring results. In November 2004 total petroleum hydrocarbons as diesel (TPHd) was detected at a concentration of 190 µg/L.

Monitoring Well MW-26: In MW-26, 1,1-DCA concentrations decreased from 82 µg/L in April 2004 to 31 µg/L in April 2004, while 1,2-DCA concentration increased from 33 µg/L to 44 µg/L during the same period. Total petroleum hydrocarbons as gasoline (TPHg) concentration decreased in MW-26 from 1,380 µg/L as measured on April 27, 2004 to 740 µg/L measured on November 17, 2004. In November 2004 TPHd was detected at a concentration of 820 µg/L; the TPHd concentration in April 2004 was below the 250 µg/L laboratory detection limit. MTBE concentration increased to 120 µg/L compared to less than 0.5 µg/l in the previous quarter.

Monitoring Well MW-27: On November 17, 2004 the TPHd concentration was 64 µg/L; the TPHd concentration in the previous sampling event on April 27, 2004 was below the laboratory detection limit of 250 µg/L.

Monitoring Well MW-28: MTBE concentration in monitoring well MW-28 decreased from 9.29 µg/L on April 27, 2004 to below the laboratory detection limit of 5.0 µg/L measured on November 17, 2004, whereas, 1,2-DCA concentration increased from below the 0.5 µg/L laboratory detection limit to 4.7 µg/L during the same period.

Monitoring Well MW-29: 1,1-DCA concentration decreased from 160 µg/L to 33 µg/L from April 2004 to November 2004, and 1,2-DCA concentration decreased from 28 µg/L to 6.5 µg/L during the same period. MTBE increased from 15.3 µg/L to 120 µg/L from April 2004 to November 2004. TPHg concentration was 120 µg/L in November 2004; the TPHg concentration in April 2004 was below the 200 µg/L laboratory detection limit.

Monitoring Well MW-30: On November 17, 2004 TPHd was 140 µg/L; the TPHd concentration on April 27, 2004 was below the 250 µg/L laboratory detection limit.

Monitoring Well MW-32: 1,2-DCA concentrations in monitoring well MW-32 decreased from 3.0 µg/L measured in April 2004 to 2.1 µg/L measured in November 2004.

Monitoring Well PR-76: In monitoring well PR-76, TPHd concentration was 85 µg/L on November 17, 2004 and was below the 250 µg/L laboratory detection limit on April 27, 2004.

5 CONCLUSION AND RECOMMENDATION

Based on the recent semiannual sampling results, it is observed that the plume is stable and/or decreasing. ECM recommends scheduling a meeting with ACHA and the RWQCB to discuss about discontinuation of the monitoring program and thus, a site closure.

Notes

ND

Not detected.

NA

Not analyzed or not sampled.

µg/L

Micrograms per liter.

TPH-G

Total Petroleum Hydrocarbons as gasoline.

TPH-D

Total Petroleum Hydrocarbons as diesel.

1,1-DCA

1,1-Dichloroethane.

1,1-DCA

1,2-Dichloroethane.

cis-1,1-DCE

1,1-Dichloroethene.

1,1,1-TCA

1,1,1-Trichloroethane.

1,2-DCE

cis 1,2-Dichloroethylene.

TCE

Trichloroethene

MTBE

Methyl tertiary butyl ether.

I)10/22/02 Data was confirmed anomalous by resampling on 11/15/02.

Nestlé Laboratory Analytical Reports and Chain-of-Custody
Documentation

Environmental Cost Management

December 01, 2004

660 Baker St.,
Costa Mesa, CA 92626
Attn.: Binayak Acharya
Project: Nestle Oakland

Mr. Acharya

Attached is our report for your samples received on 11/17/2004 12:20
This report has been reviewed and approved for release. Reproduction of this report
is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after
01/01/2005 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions,
please call me at (925) 484-1919.

You can also contact me via email. My email address is: dsharma@stl-inc.com

Sincerely,

Dimple Sharma
Project Manager

Legend and Notes

Analysis Flag

L2

Reporting limits were raised due to high level of analyte present
in the sample.

Result Flag

Q1

Quantit. of unknown hydrocarbon(s) in sample based on gasoline.

Q6

The concentration reported reflect(s) individual or discrete unidentified
peaks not matching a typical fuel pattern.

Diesel
