Duration: 0 hours

Phone call with Brent Searcy of ECI. They have completed their field work but only got to a depth of about 20 feet in proposed boring to 30 feet bgs. They encountered a consolidated sand at that depth and were unable to get through with a Geoprobe rig. He wanted to know whether they will need to go back out. Nestle would like to complete prior to submitting a report if work is necessary. He will submit preliminary results to help decide whether going back with auger rig is needed. They could not get water from one boring but he believes that data from surrounding borings will be sufficient.
