## **1.0 INTRODUCTION**

AEI Consultants (AEI) has prepared this final report to document underground storage tank closure activities performed at in , California formerly known as the Former Carnation Facility (Figure 1: Site Location Map). A total of five (5) underground storage tanks (USTs) were removed from the property. one 1,500 gallon; two 500 gallon; two 12,000 gallon diesel/motor oil. The tank locations are shown in (Figure 2: Site Plan).

AEI was contracted to obtain all necessary permits, excavate to expose the tanks, remove and dispose of residual liquids, remove and dispose of the tanks, and perform soil sampling and analysis.

## **2.0 PERMITS**

Permits were obtained on November 2, 2007. Mr. Keith Matthews was assigned to represent the Oakland Fire Department, and observed the tank closure activities at the site. The excavation areas were marked and the property representatives were notified of the specific time plan.

Copies of the permit and notification documents are located in Appendix A: Permits and Notification Documents.

## **3.0 MOBILIZATION, EXCAVATION AND REMOVAL**

On November 2, 2006 the AEI field staff was briefed and the Site Health and Safety Plan reviewed prior to the initiation of work. The Site Health and Safety Plan is located in Appendix B. Ground cover was broken months prior to AEI's mobilization by the property owner's demolition contractor. The soil above the bunker oil UST was excavated on November 2, 2007. Upon exposing the UST, it was determined that the bunker oil tank was approximately 1,500 gallons in size, rather than the suspected 5,000 gallons. The two gasoline USTs were later discovered upon further ground surveying investigations of the property. The soils above the gasoline tanks were excavated on November 6, 2007. Upon exposure of the gasoline tanks, each tank was approximately 500 gallons in size. Three separate stockpiles were created adjacent to each excavation on their respective dates (Figure 2: Site Plan and Figure 3: Sample Location Plan).

Ecology Control Industries' (ECI) removed 2,100 gallons of waste liquid from the bunker oil and gasoline tanks prior to removal. Dry ice was introduced into each tank until the Lower Explosive Limit (LEL) and oxygen content reached acceptable levels.

The tanks were removed on November 13, 2007 and were visually inspected prior to loading for transport. The single walled-steel bunker oil tank was in fair condition and positioned vertically downward into the ground with signs of rust on its exterior. The single walled-steel gasoline

tanks were also in fair condition with signs of rust on their exteriors. Tank T-2's exterior had parts of concrete stuck on, surrounding the tank and a small pit approximately two inches in size on one side. No visual holes were found on tank T-3.

The tanks were loaded onto ECI trucks and transported under non-RCRA hazardous waste manifest to the ECI disposal facility at 255 Parr Boulevard in Richmond, California, where the tanks were triple rinsed, cut, and scrapped.

On November 19, 2007, the soil surrounding the two diesel/bunker oil tanks were excavated and upon exposure it was determined that each tank was approximately 12,000 gallons in size as originally known. Tank T-5 was encased in a concrete vault and broken apart, using an excavator breaker. Both diesel tanks were filled in with concrete. Their exteriors were saw-cut to expose, break, and dispose of their concrete fillings. The concrete stockpile was place onsite away from the excavation areas and will be recycled by other parties on a later date. The single walled-steel tanks were in fair condition with signs of rust on their exteriors. No visual holes were found. By the direction of Mr. Keith Mathews the diesel tanks were marked and considered as non-hazardous material. Both tanks were cut into several pieces and disposed of as scrap metal.

Soil samples were collected on each respective tanks removal date. Petroleum hydrocarbon impacted soils were visible from the diesel tanks and tank T-3's excavation. By the direction and approval of Mr. Keith Matthews, a work plan dated November 29, 2007 was implemented by AEI regarding further excavation, removal, and sampling of the remaining impacted soils from the excavation areas until determined acceptable by state regulations. The remaining excavation areas were left open by the request of the client.

On November 27, 2007, AEI loaded approximately 1,800 tons of excavated soils which were transported from the site by S&S Trucking under non-RCRA hazardous waste manifest to Keller Canyon Landfill at 901 Bailey Road in Pittsburg, California, where the soils were disposed.

The waste manifests for the waste liquid, soil, and tanks are located in Appendix C, D and E respectively.

#### **4.0 SAMPLING AND ANALYSES**

All samples were collected under the direction of Mr. Keith Matthews from the Oakland Fire Department. A total of three (3) soil samples were collected from the bunker oil tank removal activities. One sample, labeled WSW, was collected on the westerly sidewall of the excavation pit approximately eight feet below ground surface (bgs). Groundwater was encountered at approximately twelve feet bgs and a single water sample was collected and labeled BO-W.

Twelve (12) discrete soil samples were collected from three stockpiles, and were composited into three separate samples for analysis. Sample STK1,2,3,4 and STK5,6,7,8 consisted of the excavated soils from the bunker oil tank removal activities, and sample STKB5,6,7,8 consisted of the excavated soils from the gasoline tank removal activities.

On the diesel tanks' removal date, a total of five (5) soil samples were collected. Two samples labeled LS2 and LS2B were collected at each end of tank T-4; two samples labeled LS1 and LS1B were collected at each end of tank T-5; and one sample labeled LS1S was collected on the easterly sidewall of the initial excavation. Based on AEI's work plan regarding the diesel tanks' excavation, AEI extended the excavation until no further contaminated soils were apparent.

Groundwater was encountered at approximately twelve feet bgs from the former diesel tanks' area. On November 27, 2007, two groundwater samples were collected and composited into a single sample for analysis (L2W). Upon the extent of the excavation and removal of the impacted soils, seven (7) confirmation samples were collected on December 29, 2007. Three bottom samples, approximately twenty feet in distance from one another, labeled MB1, MB2, and MB3 were collected just above the groundwater table; and four (4) samples, approximately twenty-five feet in distance from one another on each sidewall, labeled MW1, MW2, MF1, and MF2 were collected on the westerly and southerly sidewalls just above the soil and water interface.

Sixteen (16) discrete soil samples were collected from two large stockpiles which were created from the diesel tanks' removal, excavation, and excavation extent activities. One stockpile consisted of visibly clean soils and one stockpile consisted of visible impacted soils. All samples were composited into four separate soil samples, two from each stockpile for analysis. The suspected clean stockpile samples were labeled LST1,2,3,4 and LSTB1,2,3,4 and the contaminated stockpile samples were labeled LST5,6,7,8 and LSTB5,6,7,8. Please refer to Figure 3: Sample Location Plan for the sample locations.

Over the period of both excavations from tank T-3 and the diesel tanks, the groundwater recharge was pumped into a 21,000 gallon above ground water storage tank, and the excess amount was pumped and disposed of by Excel Environmental Services, Inc. The disposal of the groundwater pumped into the water storage tank was disposed of into the sanitary sewer under permit from East Bay Municipal Utility District.

Native material consisted primarily of clay and sandy clay sediments. All soil samples were collected in brass tubes that were driven into the soil until completely full, then sealed with Teflon tape and plastic caps. The secured sample tubes were immediately placed into a cooler with ice. Chain of Custody documentation was initiated. The cooler and samples were brought to McCampbell Analytical, Inc. (State Certification #1644) of Pittsburg, California on each respective tank removal and excavation confirmation dates for analysis.

The soil and groundwater samples were analyzed for Total Petroleum Hydrocarbons as gasoline (EPA 8015), Total Petroleum Hydrocarbons as diesel (EPA 8015), Total Petroleum Hydrocarbons as bunker oil (TPH-bo) (EPA 8015) Total Petroleum Hydrocarbons as diesel (EPA 8015), Total Petroleum Oil & Grease (POG)(EPA 1664/5520 E), methyl-tert-butyl ether (MTBE), benzene, toluene, ethyl-benzene, and xylenes (BTEX) (EPA Method 602/8020), Volatile Organic Compounds (VOCs)(EPA 8260), Polychlorinated Biphenyl's (PCBs) (EPA 608/8082), and CAM 17 Metals (EPA 6010/6020).

Analysis of groundwater sample BO-W (from the T-1 excavation) detected POG at 7.9 mg/L; TPH-g at 130 µg/L; Xylenes at 2.1 µg/L; TPH-d at 1,700 µg/L; and TPH-bo at 2,100 µg/L. In soil sample BO-3, analysis detected TPH-g at 5,400 mg/Kg; TPH-d at 1,400 mg/Kg; Toluene at 1.9 mg/Kg; Ethyl benzene at 8.8 mg/Kg; and Xylenes at 15 mg/Kg. All three stockpile sample analysis detected POG ranging from 50 mg/Kg to 14,000 mg/Kg; TPH-g ranging from 50 mg/Kg to 730 mg/Kg; MTBE ranging from 0.005 mg/Kg to 5.1 mg/Kg; and TPH-d ranging from 1.0 mg/Kg to 8,700 mg/Kg. Polychlorinated Biphenyls were not detected in any of the samples. Petroleum hydrocarbons were not detected above laboratory detection limits in the other three samples including stockpile sample STK1,2,3,4 which maybe planned for backfill use. Low concentrations of several VOCs, including BTEX and MTBE were detected in the samples. Metal concentration appeared to be consistent with naturally occurring conditions. A confirmation sample collected from the T-1 excavation following removal of all obviously impacted soil and after de-watering the excavation several times found no petroleum hydrocarbons at or above laboratory detection limits.

In soil sample TW, analysis detected TPH-g at 5,400 mg/Kg; TPH-d at 1,400 mg/Kg; BTEX reported as non-detectable at reporting limit of 1.0 mg/Kg and MTBE reported as non-detectable at reporting limit of 10 mg/Kg. Following excavation of all obviously impacted soil four sidewall samples were collected and reported no detectable concentrations of TPH-g, TPH-d, BTEX, and MTBE at reporting limits of 1.0 mg/Kg, 1.0 mg/Kg, 0.005 mg/Kg, and 0.05 mg/Kg, respectively. A confirmation groundwater sample was collected from the T-3 excavation following removal of all obviously impacted soil and after de-watering the excavation several times reported TPH-g and TPH-d at concentrations of 85 µg/L and 92 µg/L, respectively. MTBE and BTEX were reported as non-detectable at or above laboratory detection limits.

From the diesel tanks' sampling activities, analysis of sample LS1 detected TPH-d at 11mg/Kg. The four stockpile samples detected POG ranging from 50 mg/Kg to 2,700 mg/Kg; TPH-g ranging from 1.0 mg/Kg to 1,200 mg/Kg; MTBE ranging from 0.005 mg/Kg to 3.2 mg/Kg; TPH-d ranging from 1.0 mg/Kg to 1,200 mg/Kg; and low concentrations of VOCs. Polychlorinated Biphenyls were not detected in either sample. Petroleum hydrocarbons and VOCs were not detected above laboratory detection limits in the remaining samples. Metal concentration appeared to be consistent with naturally occurring conditions. The confirmation samples collect prior to the removal of the impacted soils and groundwater determined that petroleum hydrocarbons are no longer present above laboratory detection limit. The analytical results for all soil sampling activities are summarized in Tables 1-6.

Copies of all analytical results and Chain of Custody documentation are located in Appendix F: Analytical Documentation.

## 5.0 SUMMARY AND CONCLUSIONS

On November 6 and November 13, 2007, one-1,500 gallon bunker oil, gasoline, diesel USTs were removed from the property located at 1310 14<sup>th</sup> Street in Oakland, California formerly know as the Former Carnation Facility. Prior to removal, 2,100 gallons of waste liquids were removed, transported, and disposed off-site. The bunker oil and gasoline tanks were transported under non-RCRA hazardous waste manifest to the Ecology Control Industries' disposal facility in Richmond, California where the tanks were cleaned and disposed of as scrap metal. The diesel tanks were marked and considered to be non-hazardous by the direction of Mr. Keith Matthews from the Oakland Fire Department. Both tanks were cut into several pieces and disposed of as scrap metal.

Approximately 1,800 tons of excavated soils were accepted for disposal at and transported under non-RCRA hazardous waste manifests to Keller Canyon Landfill in Pittsburg, California.

Based on the confirmation sample analyses, the majority of petroleum impacted soils in the immediate vicinity of the former USTs were removed by the excavation activities. The findings of these activities should be reviewed by the RWQCB. No further investigation or remedial action is expected to be required at this time relating to the former USTs.

## 6.0 REPORT LIMITATIONS AND SIGNATURES

This report presents a summary of work completed by AEI Consultants, including observations and descriptions of site conditions encountered. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide requested information, but it cannot be assumed that they are representative of areas not sampled. All conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document.

All services were performed in accordance with generally accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work.

Sincerely,  
**AEI Consultants**

Kirby Fernando  
Project Manager

Dusty Roy  
Director, Construction

Robert F. Flory, PG  
Senior geologist

## **APPENDIX B**

### **Site Health and Safety Plan**

## **HEALTH AND SAFETY PLAN**

Prepared for:

UST Removal  
at  
1310 14th Street  
Oakland, CA

## **A. INTRODUCTION**

This Site Specific Health and Safety Plan is written for the UST Removal project located at 1310 14th Street in Oakland, CA. All job site personnel will follow OSHA safe operating practices as outlined in 29 CFR 1910 and 1926, as well as established guidelines set forth by AEI Consultants or their respective companies.

## **B. WORK DESCRIPTION**

Prepared by: Kirby Fernando

Site Manager: Dusty Roy

Address: 1310 14th Street  
Oakland, CA

Scope of Work: AEI Consultants (AEI) will remove (1) 5000 gallon-gallon bunker oil underground storage tank located at the above address. The tank will be emptied, removed, and disposed of according to federal, state and local regulations. 1 soil sample(s) will be taken from the native material beneath each tank. One composite sample will be made from 4 discrete soil samples from the excavated material.

## **C. SITE/WASTE CHARACTERISTICS**

Hazard Level:            Serious:  
                                 Low:  
                                 Moderate:  
                                 Unknown:

Waste Type:            Solid:            Underground Storage Tank  
                                 Sludge:        None  
                                 Liquid:        Product Remaining Inside Tank  
                                 Gas:            None

Hazard Characteristics:        Combustible, Toxic

There will be a three foot boundary surrounding the excavation pit and the stockpiled material. The area within this boundary is considered an exclusion zone and only qualified personnel will be

allowed to enter. All personnel arriving or departing the site must clear with the Site Manager. All activities on site must be cleared through the Site Manager.

## D. HAZARD EVALUATION

Potential chemical hazards include skin and eye contact or inhalation exposure to potentially toxic concentrations of hydrocarbon vapors. The potential toxic compounds that may exist at the site are listed below with descriptions of specific health effects of each. The list includes the primary potential toxic constituents that may be found at sites which previously handled petroleum hydrocarbons, including home heating diesel fuel.

### 1. Benzene

- a. Colorless to light yellow, flammable liquid with an aromatic odor.
- b. Toxic hazard by **inhalation, adsorption, ingestion** and **skin and/or eye contact**.
- c. Exposure may irritate eyes, nose and respiratory system and may cause acute restlessness, convulsions, nausea, or depression. Benzene is carcinogenic.\*
- d. Permissible exposure level (PEL) for a time weighted average (TWA) over an eight hour period is 1.0 ppm.

### 2. Toluene

- a. Colorless liquid with a sweet, pungent, benzene like odor.
- b. Toxic hazard by **inhalation, adsorption, ingestion** and **skin and/or eye contact**.
- c. Exposure may cause fatigue, weakness, confusion, euphoria, dizziness, headaches, dilated pupils, lacrimation, nervousness, insomnia, paresthesia, and dermatitis.
- d. Permissible exposure level for a time weighted average over an eight hour period is 100 ppm.

### 3. Xylene

- a. Colorless liquid with an aromatic odor.
- b. Toxic hazard by **inhalation, adsorption, ingestion** and **skin and/or eye contact**.
- c. Exposure may irritate eyes nose and throat and may cause dizziness, excitement, drowsiness, incoordination, corneal vacuolization, anorexia, nausea, vomiting, and dermatitis.
- d. Permissible exposure level for a time weighted average over an eight hour period is 100 ppm.

### 4. Ethylbenzene

- a. Colorless liquid with an aromatic odor.
- b. Toxic hazard by **inhalation, ingestion**, and **skin and/or eye contact**. Ethylbenzene is carcinogenic.\*
- c. Exposure may irritate eyes and mucous membrane and may cause headaches, dermatitis, narcosis and loss of consciousness.
- d. Permissible exposure level for a time weighted average over an eight hour period is 100 ppm.

5. Lead

- a. A heavy ductile soft grey metal.
- b. Toxic hazard by **inhalation, ingestion, and skin and/or eye contact**.
- c. Exposure may cause weakness, nausea, lassitude, diarrhea, insomnia, anorexia, inflamed mucous membranes and abdominal pains. Lead is carcinogenic.\*
- d. Permissible exposure level for a time weighted average over an eight hour period is .05 ppb (in vapor).

6. Diesel

- a. Colorless to dark brown, combustible liquid with an aromatic odor
- b. Toxic hazard by **inhalation, ingestion, skin and/or eye contact**.
- c. Inhalation of vapors may depress the central nervous system, increasing reaction times, and decreasing pulse rate and blood pressure. Skin irritant.
- d. Occupational exposure limit 5.0 ppm (in vapor).

7. Gasoline

- a. Colorless liquid with a strong aromatic odor. Highly volatile and extremely flammable.
- b. Toxic hazard by **inhalation, adsorption, ingestion and skin and/or eye contact**.
- c. Inhalation of vapors can cause depression of the central nervous system with symptoms such as headache, dizziness, nausea and loss of coordination. Skin contact can cause defatting of the skin, skin irritation and dermatitis. Benzene is a major constituent of gasoline.
- d. Permissible exposure level for a time weighted average over an eight hour period is 300 ppm.

8. Waste Oil

- a. Toxic hazard by **ingestion** and possibly **inhalation**.
- b. Prolonged contact may cause skin irritation and dermatitis. Waste oil may be carcinogenic.\*
- c. Waste oil may contain metals or toxic organics from thermal breakdown of the oil. In some cases, chlorinated solvents may be present.
- d. Permissible exposure level for a time weighted average over an eight hour period is 5 ppm (in vapor).

\* **Known to the State of California to cause cancer.**

Dusty Roy has been designated to coordinate access control and security on site. All work will strictly follow OSHA guidelines. A safe perimeter will be established at a three foot radius surrounding the site. These boundaries are identified by yellow caution tape and orange safety cones. Personnel shall maintain the maximum distance from the pit while performing their duties. No one shall enter an excavation pit that is greater than five feet in depth unless the excavation is shored or sloped and no one shall climb on the stockpiled material except to cover it with plastic. Additional hazards on site include heavy equipment and overhead lifting equipment. Heavy equipment used for performing the tank removal project may include a backhoe, an excavator, or a crane for lifting the tank out of the excavation. Only 40 hour trained personnel will operate equipment or perform any duty associated with this project. A hard hat and steel toed boots are mandatory for all personnel associated with the tank removal.

A FIRST AID KIT and a 40 pound BC FIRE EXTINGUISHER will be available on-site.

Emergency services are available by dialing 911 on the telephone located in the Site Manager's vehicle. This Vehicle will be on site at all times.

## **E. PERSONAL PROTECTIVE CLOTHING**

Based on evaluation of potential hazards, level "D" protective clothing has been designated as the appropriate protection for this project. The level of protective clothing will be upgraded if the organic vapor levels in the operator's breathing zone exceed 5 ppm above background levels continuously for more than five minutes, or if any single reading exceeds 25 ppm. If this occurs then level C protection will be used. If the organic concentration in the operator's breathing zone exceeds 200 ppm for 5 minutes and/or the organic vapor concentration two feet above the excavation exceeds 1,000 ppm or 10% of the lower explosive limit, then the equipment will be shut down and the site evacuated. If organic vapor concentrations exceed 200 ppm and work continues then level B protection will be required.

"EPA Standard Operating Safety Guidelines" defines the levels of protective clothing as follows:

### LEVEL A:

Fully encapsulating suit / SCBA / Hard hat / Steel toe boots / Safety gloves.

### LEVEL B:

Splash resistant suit / SCBA / Hard Hat / Steel toe boots / Safety gloves.

### LEVEL C:

Half face respirator / Hard hat / Safety glasses / Steel toe boots / Coveralls / Gloves.

### LEVEL D:

Coveralls / Hardhat / Safety Glasses / Steel toe boots / Gloves.

If air purifying respirators are authorized, organic vapor w-filter is the appropriate canister for use with the involved substances and concentrations. A competent individual has determined that all criteria for using this type of respiratory protection have been met.

NO CHANGES TO THE SPECIFIED LEVELS OF PROTECTION SHALL BE MADE WITHOUT THE APPROVAL OF THE SITE MANAGER.

## **F. MONITORING INSTRUMENTS**

The following environmental monitoring instruments shall be used on site at specified intervals.

Lower Explosive Limit (LEL) Meter that will also check the tank for Oxygen levels will be used to check the tank for removal and transportation.

## **G. EMERGENCY HOSPITAL**

The closest hospital with an emergency room is:

		Date Received: 11/13/07
	Client Contact: Kirby Fernando	Date Reported: 11/20/07
	Client P.O.:	Date Completed: 11/20/07

**WorkOrder: 0711340**

November 20, 2007

Dear Kirby:

Enclosed are:

- 1). the results of **8** analyzed samples from your **#275493; Carnation project**,
- 2). a QC report for the above samples
- 3). a copy of the chain of custody, and
- 4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions please contact me. McC Campbell Analytical Laboratories strives for excellence in quality, service and cost. Thank you for your business and I look forward to working with you again.

Best regards,

Angela Rydelius, Lab Manager

### Surrogate Recoveries (%)

%SS1:	102	%SS2:	96
%SS3:	92		

Comments:

\* water and vapor samples are reported in µg/L, soil/sludge/solid samples in mg/kg, product/oil/non-aqueous liquid samples and all TCLP & SPLP extracts are reported in mg/L, wipe samples in µg/wipe.

ND means not detected above the reporting limit; N/A means analyte not applicable to this analysis.

# surrogate diluted out of range or coelutes with another peak; &) low surrogate due to matrix interference.

h) lighter than water immiscible sheen/product is present; i) liquid sample that contains greater than ~1 vol. % sediment; j) reporting limit raised due to high organic content/matrix interference; k) reporting limit near, but not identical to our standard reporting limit due to variable Encore sample weight; m) reporting limit raised due to insufficient sample amount; n) results are reported on a dry weight basis; p) see attached narrative.

#### Surrogate Recoveries (%)

%SS1:	110	%SS2:	92
%SS3:	97		

Comments: i

\* water and vapor samples are reported in µg/L, soil/sludge/solid samples in mg/kg, product/oil/non-aqueous liquid samples and all TCLP & SPLP extracts are reported in mg/L, wipe samples in µg/wipe.

ND means not detected above the reporting limit; N/A means analyte not applicable to this analysis.

# surrogate diluted out of range or coelutes with another peak; &) low surrogate due to matrix interference.

h) lighter than water immiscible sheen/product is present; i) liquid sample that contains greater than ~1 vol. % sediment; j) reporting limit raised due to high organic content/matrix interference; k) reporting limit near, but not identical to our standard reporting limit due to variable Encore sample weight; m) reporting limit raised due to insufficient sample amount; n) results are reported on a dry weight basis; p) see attached narrative.

BATCH 31810 SUMMARY

Sample ID	Date Sampled	Date Extracted	Date Analyzed	Sample ID	Date Sampled	Date Extracted	Date Analyzed
0711340-008E	11/13/07 2:40 PM	11/13/07	11/16/07 2:56 PM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery =  $100 * (MS - Sample) / (Amount\ Spiked)$ ; RPD =  $100 * (MS - MSD) / ((MS + MSD) / 2)$ .

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 \* (MS-Sample) / (Amount Spiked); RPD = 100 \* (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

0711340-007A	11/13/07 2:25 PM	11/13/07	11/15/07 2:56 PM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 \* (MS-Sample) / (Amount Spiked); RPD = 100 \* (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

**WorkOrder: 0711621**

December 05, 2007

Dear Kirby:

Enclosed are:

- 1). the results of 9 analyzed samples from your #276000; Carnation project,
- 2). a QC report for the above samples
- 3). a copy of the chain of custody, and
- 4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius, Lab Manager

### Surrogate Recoveries (%)

%SS:	111			
------	-----	--	--	--

**Comments**

\* water samples in µg/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, filter samples in µg/filter, product/oil/non-aqueous liquid samples and all TCLP & SPLP extracts are reported in mg/L.

ND means not detected above the reporting limit; N/A means analyte not applicable to this analysis.

# surrogate diluted out of range or surrogate coelutes with another peak.

(h) a lighter than water immiscible sheen/product is present; (i) liquid sample that contains >>1 vol. % sediment; (j) sample diluted due to high organic content/matrix interference; (k) p,p,- is the same as 4,4,-; (l) florisisil (EPA 3620) cleanup; (m) silica-gel (EPA 3630) cleanup; (n) elemental sulfur (EPA 3660) cleanup; (o) sulfuric acid permanganate (EPA 3665) cleanup; (p) see attached narrative; (q) reporting limit raised due to insufficient sample amount; (r) results are reported on a dry weight basis;

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 \* (MS-Sample) / (Amount Spiked); RPD = 100 \* (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

**WorkOrder: 0711634**

December 04, 2007

Dear Kirby:

Enclosed are:

- 1). the results of **1** analyzed sample from your **#276000; Carnation project**,
- 2). a QC report for the above sample
- 3). a copy of the chain of custody, and
- 4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius, Lab Manager

### Sample Receipt Checklist

Client Name: **AEI Consultants**

Date and Time Received **11/27/07 2:31:02 PM**

Project Name: **#276000; Carnation**

Checklist completed and reviewed by: **Maria Venegas**

WorkOrder N°: **0711634** Matrix Water

Carrier: Client Drop-In

#### Chain of Custody (COC) Information

- Chain of custody present? Yes  N
- Chain of custody signed when relinquished and received? Yes  N
- Chain of custody agrees with sample labels? Yes  N
- Sample IDs noted by Client on COC? Yes  No
- Date and Time of collection noted by Client on COC? Yes  No
- Sampler's name noted on COC? Yes  No

#### Sample Receipt Information

- Custody seals intact on shipping container/cooler? Yes  N  NA
- Shipping container/cooler in good condition? Yes  N
- Samples in proper containers/bottles? Yes  N
- Sample containers intact? Yes  N
- Sufficient sample volume for indicated test? Yes  N

#### Sample Preservation and Hold Time (HT) Information

- All samples received within holding time? Yes  N
- Container/Temp Blank temperature Cooler Temp: 18.2°C NA
- Water - VOA vials have zero headspace / no bubbles? Yes  N  No VOA vials submitted
- Sample labels checked for correct preservation? Yes  No
- TTLC Metal - pH acceptable upon receipt (pH<2)? Yes  N  NA

#### BATCH 32102 SUMMARY

Sample ID	Date Sampled	Date Extracted	Date Analyzed	Sample ID	Date Sampled	Date Extracted	Date Analyzed
0711634-001A	11/27/07 12:02 PM	11/28/07	11/28/07 8:01 AM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 \* (MS-Sample) / (Amount Spiked); RPD = 100 \* (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

£ TPH(btex) = sum of BTEX areas from the FID.

# cluttered chromatogram; sample peak coelutes with surrogate peak.

#### BATCH 32105 SUMMARY

Sample ID	Date Sampled	Date Extracted	Date Analyzed	Sample ID	Date Sampled	Date Extracted	Date Analyzed
0711634-001C	11/27/07 12:02 PM	11/27/07	11/30/07 12:15 AM				

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery =  $100 * (MS - Sample) / (Amount\ Spiked)$ ; RPD =  $100 * (MS - MSD) / ((MS + MSD) / 2)$ .

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

December 06, 2007

Dear Kirby:

Enclosed are:

- 1). the results of **7** analyzed samples from your **276000; Carnation project,**
- 2). a QC report for the above samples
- 3). a copy of the chain of custody, and
- 4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius, Lab Manager

### Surrogate Recoveries (%)

%SS:	98	92	98	94	
------	----	----	----	----	--

**Comments**

\* water samples in µg/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, filter samples in µg/filter, product/oil/non-aqueous liquid samples and all TCLP & SPLP extracts are reported in mg/L.

ND means not detected above the reporting limit; N/A means analyte not applicable to this analysis.

# surrogate diluted out of range or surrogate coelutes with another peak.

(h) a lighter than water immiscible sheen/product is present; (i) liquid sample that contains >~1 vol. % sediment; (j) sample diluted due to high organic content/matrix interference; (k) p,p,- is the same as 4,4,-; (l) florisisil (EPA 3620) cleanup; (m) silica-gel (EPA 3630) cleanup; (n) elemental sulfur (EPA 3660) cleanup; (o) sulfuric acid permanganate (EPA 3665) cleanup; (p) see attached narrative; (q) reporting limit raised due to insufficient sample amount; (r) results are reported on a dry weight basis;

%SS1:	103	%SS2:	95
%SS3:	107		

Comments:

\* water and vapor samples are reported in µg/L, soil/sludge/solid samples in mg/kg, product/oil/non-aqueous liquid samples and all TCLP & SPLP extracts are reported in mg/L, wipe samples in µg/wipe.

ND means not detected above the reporting limit; N/A means analyte not applicable to this analysis.

# surrogate diluted out of range or coelutes with another peak; &) low surrogate due to matrix interference.

h) lighter than water immiscible sheen/product is present; i) liquid sample that contains greater than ~1 vol. % sediment; j) reporting limit raised due to high organic content/matrix interference; k) reporting limit near, but not identical to our standard reporting limit due to variable Encore sample weight; m) reporting limit raised due to insufficient sample amount; n) results are reported on a dry weight basis; p) see attached narrative.

### Comments

\*water samples are reported in µg/L, product/oil/non-aqueous liquid samples and all TCLP / STLC / DISTLC / SPLP extracts are reported in mg/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, filter samples in µg/filter.

# means surrogate diluted out of range; ND means not detected above the reporting limit; N/A means not applicable to this sample or instrument.

TOTAL = acid digestion.

WET = Waste Extraction Test (STLC).

DI WET = Waste Extraction Test using de-ionized water.

i) aqueous sample containing greater than ~1 vol. % sediment; for DISSOLVED metals, this sample has been preserved prior to filtration; for TOTAL^ metals, a representative sediment-water mixture was digested; j) reporting limit raised due to insufficient sample amount; J) analyte detected below quantitation limits; k) reporting limit raised due to matrix interference; m) estimated value due to low/high surrogate recovery, caused by matrix interference; n) results are reported on a dry weight basis; p) see attached narrative.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 \* (MS-Sample) / (Amount Spiked); RPD = 100 \* (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 \* (MS-Sample) / (Amount Spiked); RPD = 100 \* (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not applicable to this method.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte

**WorkOrder: 0712272**

December 13, 2007

Dear Kirby:

Enclosed within are:

- 1) The results of the **5** analyzed samples from your project: **#276000; Carnation,**
- 2) A QC report for the above samples,
- 3) A copy of the chain of custody, and
- 4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius  
Laboratory Manager  
McC Campbell Analytical, Inc.

**WorkOrder: 0712381**

December 13, 2007

Dear Kirby:

Enclosed within are:

- 1) The results of the **1** analyzed sample from your project: **#275493; Carnation,**
- 2) A QC report for the above sample,
- 3) A copy of the chain of custody, and
- 4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius  
Laboratory Manager  
McC Campbell Analytical, Inc.
