HAYWARD, CALIFORNIA
ACEH CASE NO. RO0000023

RE: REVISED REPORT OF SOIL EXCAVATION ACTIVITIES

Dear Mr. Khatri:

GeoEnviro Services Inc. (GESI) has prepared this revised report on behalf of Restructure Petroleum Marketing Services of California (RPMS of CA) the responsible party for the cleanup of the release of petroleum hydrocarbons from USTs formerly operated by EZ-Serve (Former EZ Serve No. 100877) located at 525 West A Street, Hayward, California (Site). The location of the Site is shown on Figure 1. A site map showing the current configuration of the Site is shown on Figure 2.

GESI previously prepared a report of soil excavation activities dated November 21, 2008. However, some of the soil disposal transportation manifests were not included with the report. This revised report includes the additional transportation manifests.

It is our understanding that soil excavation and disposal activities were conducted on behalf of the property owner to allow the installation of three new underground storage tanks (USTs) as part of the construction of a new fuel service station. GESI was not involved in the soil excavation, stockpiling, soil sampling, profiling, or disposal of soil from the Site as part of the new station construction. Data and information included in this report were provided by the property owner.

It is our understanding that in January 2008 and July 2008, soil excavation activities were conducted by Balch Construction of Milpitas, California (Balch). Balch was contracted by Mr. Aziz Kandahari of the Himalaya, Co., the property owner and current station operator.

SOIL EXCAVATION AND TRANSPORTATION, JANUARY 2008

According to the property owner, two new USTs were installed on the western portion of the Site in January 2008. The locations of the new USTs are shown on Figure 2. Soils excavated were stockpiled onsite by Balch. It is our understanding that soils that contained field evidence of the potential presence of petroleum hydrocarbons were segregated from soils that were considered clean and did not contain field evidence of the potential presence of petroleum hydrocarbons.

On January 17, 2008, 32 loads of clean soil were transported to the Contra Costa Landfill in Richmond, California. A summary of the soil transportation activities completed by S&S Trucking is included in Appendix A.

Based upon the weight tickets 683.33 tons of soil was transported offsite to the Landfill. Assuming the soil weighed approximately 1.5 tons of soil per cubic yard, GESI estimates that approximately 455.5 cubic yards of soil were transported offsite for disposal at the Contra Costa Landfill for use as daily cover on January 17, 2008.

The remaining soil excavated in January 2008 was stockpiled onsite and covered with plastic sheeting pending transportation offsite in April 2008.

SOIL SAMPLING AND SOIL DISPOSAL, APRIL 2008

On April 3, 2008, soil samples were collected from the stockpiled soil by Sierra Environmental of San Jose, California. Based upon the chain-of-custody information, four soil samples were collected from each of two soil stockpiles. The soil samples were submitted to Accutest Laboratories of Santa Clara, California. Accutest laboratories prepared composite soil samples from the soil samples from of the two soil stockpiles. Four soil samples from each of the two stockpiles were composited into two soil samples for analysis. The two composite soil samples were analyzed for purgeable total petroleum hydrocarbons (TPH-purgeable) and fuel oxygenates: Methyl-t-butyl-Ether (MTBE), di-isopropylether (DIPE); tert-amyl methyl ether (TAME); ethyl tert-butyl ether (ETBE); and tert-butyl alcohol (TBA) by GC/MS: EPA method 5030B; hazardous metals by EPA method 3050B/6010B; and for mercury by EPA method 7471B. The chain-of-custody documentation and the laboratory analytical data are included in Attachment B.

Based upon the stockpiled soil sample laboratory analytical results, the remaining stockpiled soil was transported to Contra Costa Landfills for use as daily cover. Between April 8, 2008 and April 14, 2008, 26 truckloads of soil (552.38 tons) were transported to Contra Costa Landfills. GESI estimates that approximately 368.2 cubic yards of soil were transported offsite for disposal at Contra Costa Landfills for use as daily cover between April 8 and 14, 2008.

ADDITIONAL SOIL EXCAVATION AND DISPOSAL, MAY THROUGH JULY 2008

In May and June 2008, additional soil excavation activities were completed by Balch to allow the installation of a third UST along the southern portion of the Site. The location of the third UST is shown on Figure 2. On May 20, 2008 eight loads of soil (156.02 tons) were transported offsite to the Contra Costa landfill. Between July 1, 2008 and July 19, 2008, six loads (90.54 tons) of soil were transported to Contra Costa Landfill. GESI estimates that approximately 164 cubic yards of soil were transported offsite for disposal at Contra Costa Landfills for use as daily cover between May 20, 2008 and July 19, 2008.

SUMMARY

GESI was provided information pertaining to soil excavation, soil sampling, laboratory analysis, profiling, and disposal by Mr. Aziz Kandahari, the current property owner. Based upon the information provided, 1,482.27 tons or approximately 988 cubic yards of soil were transported offsite to Contra Costa Landfills for use as daily cover between January 17, 2008 and July 19, 2008. Soil samples collected from stockpiled soil and composited by the laboratory indicated that no significant concentrations of TPH-Purgeable, fuel oxygenates (ETBE, DIPE, MTBE, TAME, and TBA), hazardous metals including mercury were identified in the samples analyzed.

LIMITATIONS

This report has been prepared for the sole benefit of Restructure Petroleum Marketing Services of California for submittal to Alameda County Environmental Health and the State Water Resources Control Board. No other persons may rely on the findings of this report without the expressed written consent of the client and GeoEnviro Services, Inc. In performing our professional services, we have attempted to apply present engineering and scientific judgment and use a level of effort consistent with the standard of practice measured on the date of work and in locale of the Site for similar type studies. GeoEnviro Services, Inc. makes no warranty, express or implied.

The analyses and interpretations presented in this report have been developed based on the results from the review of existing information pertaining to the Site, soil and groundwater sampling at discrete locations at the Site, and the results from the laboratory analyses of soil samples. It should be recognized that soil contamination can vary between sampling locations and between areas.

REVISED REPORT OF SOIL EXCAVATION AND DISPOSAL ACTIVITIES

Project Name: Aziz Ghandehari
Project Location: 525 W. A Street

Certificate of Analysis-Additional Work

Note: This is an addition to the original 4-4-08 issue to add metals to complete CAM17 list per client request.

On April 03, 2008, samples were received under chain of custody for analysis.
Entech analyzes samples "as received" unless otherwise noted. The following results are included:

<u>Matrix</u>	<u>Test / Comments</u>
Solid	VOCs: EPA 5030B (or 5035A for Encore Samples only)/EPA 8260B Composite Mercury: EPA 7471B Metals by ICP: EPA 3050B / EPA 6010B TPH-Purgeable - GC/MS: EPA 5030B (or 5035A for Encore Samples only) / GC/MS

Entech Analytical Labs, Inc. is certified for environmental analyses by the State of California (#2346).
Subcontracted work is the responsibility of the subcontract laboratory, this includes turn-around-time and data quality.
If you have any questions regarding this report, please call us at 408-588-0200 ext. 225.

Sincerely,

Laurie Glantz-Murphy
Laboratory Director
