Alameda, CA 94502-6577

Subject: Underground Storage Tank Closure Report, UST CF-04R – Facility ID 176, 1599 Maritime Street, UST Removal Permit No. SR0029701, Site No. RO0000033, Port of Oakland, Berth 25

Dear Mr. Plunkett:

On behalf of the Port of Oakland ("Port"), BASELINE Environmental Consulting hereby transmits the Underground Storage Tank Closure Report for the removal of the underground storage tank ("UST") (CF-04R) in an area of Berth 25 at the Oakland Outer Harbor. Because the UST was located in an area subject to an Operation and Maintenance Agreement between the Port and the Department of Toxic Substances Control ("DTSC"), the Port, in a letter to the County and DTSC on 1 March 2016, requested that oversight of the UST site be provided by DTSC, should releases from the former operation of the UST be identified during UST removal. Therefore, this report is also being submitted to Mr. Thomas Price of DTSC.

Should you have any questions regarding this report, we will look forward to discussing it with you.

Sincerely,

Yane Nordhav

Dear Mr. Plunkett:

I have reviewed the attached Underground Storage Tank Closure Report prepared by BASELINE Environmental Consulting, on behalf of the Port of Oakland, for underground storage tank CF-04R. I declare, under penalty of perjury, that the information contained in the attached document is true and correct to the best of my knowledge. Should you have any questions or need additional information, please do not hesitate to contact me at your convenience.

Sincerely,

John Prall, P.G.

UNDERGROUND STORAGE TANK CLOSURE REPORT
PORT OF OAKLAND
BERTH 25 – FACILITY ID 176
Site Cleanup Program Case No. RO0000033
Permit No. SR0029701
1599 Maritime Street, Oakland, CA

1. INTRODUCTION

On 16 May 2016, a 10,000-gallon diesel-fuel Underground Storage Tank ("UST"), designated as CF-04R, was removed from Port of Oakland's ("Port") Berth 25 by NRC Environmental Services ("NRC") on behalf of the Port (Figure 1). The UST was located adjacent to Building C-131 ("site") (Figure 2). BASELINE Environmental Consulting ("BASELINE") was retained by the Port to conduct air monitoring; collect confirmation soil and groundwater samples, as required by the Alameda County Department of Environmental Health ("ACDEH") (the Alameda County Certified Unified Program Agency); and prepare this Underground Storage Tank Closure Report ("Report"). The purpose of this Report is to provide data to the ACDEH to support closure of UST CF-04R.

UST CF-04R was installed by the Port and records indicated that the last permitted operator of the UST was Ports America. Ports America located at 1599 Maritime Street in Oakland, California, has terminated their lease with the Port, including Berth 25. A new tenant, TraPac, is now operating in Berth 25.

2. PERMITS

A UST Removal Permit ("permit") was obtained from ACDEH by NRC on 19 April 2016; a copy of the permit is provided in Appendix A. NRC also arranged for Oakland Fire Department ("OFD") to be on-site to observe the tank removal. In accordance with Bay Area Air Quality Management District ("BAAQMD") Regulation 8, Rule 40, the BAAQMD was notified by NRC 5 days prior to the UST removal.

3. BACKGROUND

UST CF-04R was installed in 1993, replacing a 10,000-gallon diesel-fuel storage tank UST CF-04. The UST replacement activity was conducted under the oversight of ACDEH and the OFD. The ACDEH Local Oversight Program site address is 707 Ferry Street, Oakland, California - Case No. RO0000033 or STID #3982. The current site address is 1599 Maritime Street, as Ferry Street no longer exists.

During the removal of UST CF-04, which was removed on 3 December 1993, soil was excavated to a depth of 12.5 feet below ground surface ("bgs"); at the associated pump island, soil was excavated to 5.0 feet bgs (Uribe & Associates, 1994). The soil was characterized and

transported off-site to a permitted landfill for disposal. Geotextile fabric was placed at the bottom and along the sidewalls of the excavation and, after placement of the new UST CF-04R, the excavation was backfilled to near surface with pea gravel. The surface was restored with aggregate base and a rebar-reinforced concrete slab. During removal activities, minor impacts to groundwater were identified. One downgradient groundwater monitoring well ("MW-1") was installed and between June 1994 and December 1995, five groundwater monitoring events occurred. Based on the results, ACDEH granted regulatory closure in 1996 and the Port properly abandoned groundwater monitoring well MW-1.

UST CF-04R was a 10,000-gallon double-walled diesel-fuel storage tank constructed of fiberglass and connected to a nearby pump island with a single dispenser by subsurface piping, as shown on the design drawings in Appendix B. The UST was approximately 30 feet in length and 8 feet in diameter with the top of the tank located approximately 3 feet bgs. There were approximately 15 linear-feet of double-walled fiberglass fuel conveyance pipe between the UST and the pump island.

On behalf of Ports America, UST CF-04R was last pressure tested on 4 November 2015 by Afforda-Te$t, of Galt, California using a digital manometer. Records indicate that the UST passed the pressure test (Appendix C). The tank monitoring system, a Veeder Root TLS 350, was also tested and certified as compliant with California Code of Regulations requirements. The monitoring system included an in-tank gauging probe, annular space or vault sensor, piping sump/trench sensors, and mechanical line leak detector.

4. SITE CONDITIONS

Berth 25 is part of an active marine terminal. Shipping containers are temporarily stored on the terminal and transferred between container ships and transport trucks. The terminal is paved with asphalt or concrete, which is underlain by artificial fill consisting of terrestrial and marine fill ranging in thickness from 10 to 15 feet. The fill is underlain by Young Bay Mud, which overlies Merritt Sands of the San Antonio Formation. Groundwater occurs in the fill under unconfined to semi-confined conditions and based on groundwater monitoring performed at groundwater monitoring well MW-MG9A (Figure 2), the depth to groundwater in the area of the UST ranges from 9 to 10 feet bgs. The groundwater flow direction is northwest, toward the Oakland Outer Harbor.

The UST is located in an area in Berths 25 and 26 that is subject to the Imminent and Substantial Endangerment Determination Order and Remedial Action Order No. 01/02-001 issued by the Department of Toxic Substances Control ("DTSC") on 14 September 2001 and amended on 24 June 2003. To reduce the risk from exposure to residual contamination remaining in the subsurface, the Port entered into an Operation and Maintenance ("O&M") Agreement with DTSC on 18 August 2011 and recorded a Covenant to Restrict Use of Property, Environmental Restriction and Agreement with the Alameda County Clerk on 26 August 2011 to define a Restricted Area where certain future land uses are prohibited (Figure 2).

An O&M Plan approved by DTSC on 27 October 2010 sets forth specific requirements for breaching the cap within the Restricted Area. The O&M Plan also includes a Risk Management Plan ("RMP") detailing requirements for a health and safety plan for construction workers, dust management, management of excavated soil, specifications for imported soil, stormwater management, and dewatered groundwater management during cap breaches. Because UST CF-04R was located within the Restricted Area, the removal activities were subject to the RMP in terms of management of excess soil, import soil quality, health and safety provisions, dust management, dewatered groundwater management, stormwater management, and cap restoration.

Groundwater samples collected from groundwater monitoring well MW-MG9A, which is located near the former UST (Figure 2), indicates that the groundwater in the vicinity contains tetrachloroethene ("PCE") and degradation byproducts trichloroethene ("TCE") and *cis*-1,2-dichloroethene ("DCE"). The Port is currently performing remediation of the groundwater through monitored natural attenuation with annual groundwater monitoring under DTSC oversight.

5. UST REMOVAL ACTIVITIES

During the first week in May 2016, the Port installed K-rail around the UST work area and NRC subsequently installed 6-foot tall fence sections with windscreens along the top of the K-rail. A locking gate to control access to the work area was also installed at the northeast corner.

On 6 May 2016, BASELINE collected background air quality measurements at the site. The measurements were collected using a photo-ionization detector ("PID") calibrated with isobutylene and set with a correction factor for benzene, and a particulate meter measuring particulates less than 10 microns in diameter ("PM10") or "respirable" dust. The background measurements were taken at four compass points around the work area. The results indicated that Volatile Organic Compounds ("VOCs") above the PID detection limit (1 part-per-million ["ppm"]) were not detected and the PM10 concentrations ranged from 0.0082 to 0.0121 milligrams per cubic meter ("mg/m^3"). Action levels specified in the RMP are 5 ppm for VOCs and 2.5 mg/m^3 for PM10.

On 9 May 2016, NRC removed 2,000 gallons of diesel fuel from the UST; the diesel fuel was placed in a 5,000-gallon vacuum truck. BASELINE preformed short-term air monitoring while NRC was removing fuel from the UST, no VOCs were detected and PM10 concentrations ranged from 0.0161 to 0.0218 mg/m^3, similar to background levels and below action levels.

Photograph 1: NRC removing fuel from UST.

On 10 May 2016, BASELINE preformed air monitoring with the PID while NRC penetrated the concrete surface over the UST at seven locations with a hoe ram. Sustained VOCs readings emanating from the holes ranged from non-detect to 4.5 ppm.

On 13 May 2016, NRC removed the pump dispenser; demolished the concrete overlying the UST and the pump dispenser island; and pumped out water and oily sludge from an adjacent oil-water separator into the vacuum truck. The UST was triple rinsed and the resultant water was also stored in the 5,000-gallon vacuum truck. The contents of the vacuum truck were disposed of by NRC, on behalf of the Port, to DeMenno Kerdoon as hazardous waste (Appendix D). During demolition of the overlying concrete, the fiberglass fill port and pump containment structures were damaged. In accordance with the RMP, BASELINE performed air monitoring with a PID and PM10 meter in the worker breathing space downwind of the work. No exceedances of the action levels were recorded. Air monitoring logs are provided in Appendix E.

Photograph 2: Concrete demolition.

The concrete rubble and pea gravel surrounding the UST were excavated on 14 and 15 May 2016. The construction debris, consisting of concrete, rebar, filter fabric, and pea gravel were placed in bins with covers and stored adjacent to Berth 25 maintenance building (Figure 2). The pea gravel was excavated to expose the top two-thirds of the UST in preparation of removing the UST on 16 May 2016. The UST was damaged along the southwest side and at the northwest end while excavating the surrounding pea gravel. The double-walled fiberglass fuel-conveyance piping was removed and observed to be in good condition with no obvious cracks or leaks. The oil-water separator was removed intact and BASELINE collected two soil samples from the soil below the structure at 4.5 feet bgs. During these activities, BASELINE performed air monitoring with a PID and PM10 meter in the worker breathing space downwind of the work; no exceedances of the action levels were recorded.

Photograph 3: Excavation of pea gravel.

Photograph 4: Groundwater encountered at approximately 9 feet bgs, no sheen or odor.

Photograph 5: Double-walled fuel conveyance pipe.

Photograph 6: UST exposed and ready to be removed.

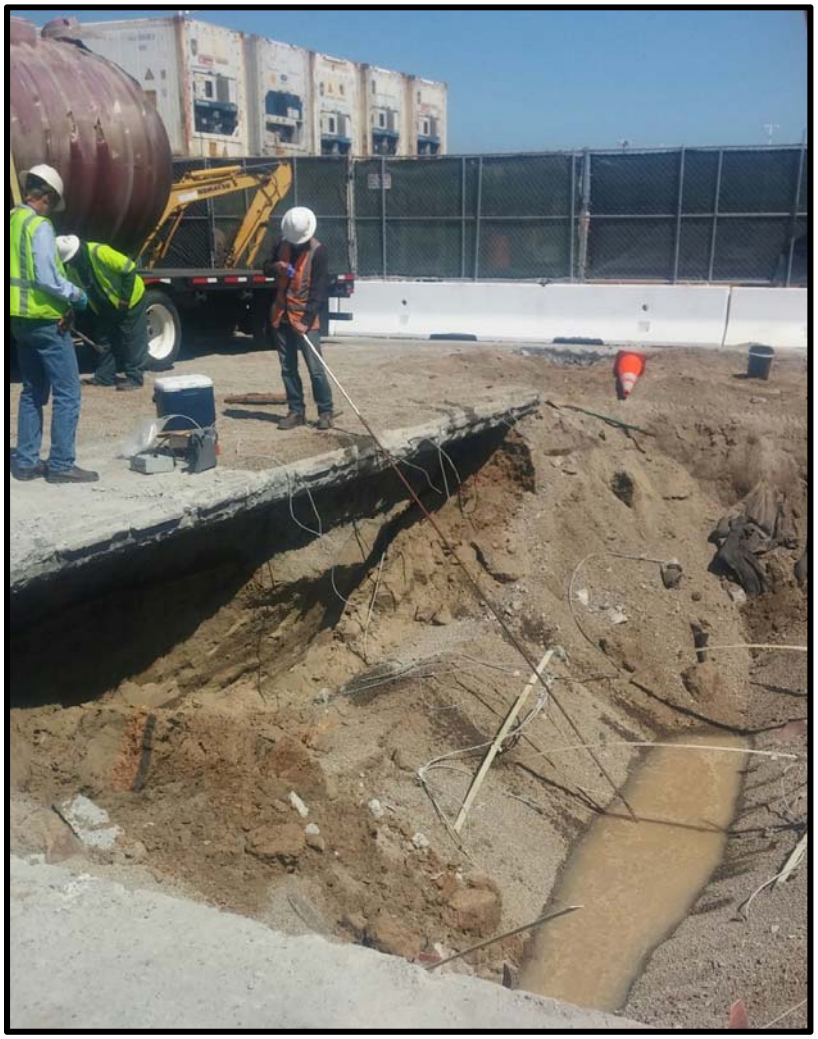
Photograph 7: Oil-Water separator.

The UST was removed on 16 May 2016 in the presence of Steven Plunket from ACDEH and Sheryl Skillern from OFD. Prior to removal from the excavation, 500 pounds of dry ice were introduced into the UST to displace any explosive vapors and the lower explosive limit ("LEL") and oxygen content were measured. When the LEL and oxygen concentrations had reached acceptable levels, and with the approval of the OFD, the UST was lifted out of the excavation and was visually inspected prior to loading for transport. The LEL and oxygen concentrations were documented on a Hazardous Waste Tank Closure Certification form. The UST was observed to be in good condition except for the damage incurred during excavation of the surrounding pea gravel, as noted above. The UST was disposed of at Ecology Control Industries in Richmond, California as hazardous waste. Copies of the hazardous waste manifests and the Hazardous Waste Tank Closure Certification are provided in Appendix D. During these activities, BASELINE performed air monitoring with a PID and PM10 meter in the worker breathing space downwind of the work; no exceedances of the action levels were recorded.

Photograph 8: UST lifted out of excavation.

Photograph 9: UST loaded on truck.

After consultation with the ACDEH, BASELINE collected two soil samples from the excavation sidewalls within the vadose zone; one soil sample from below the pump dispenser island; and one groundwater sample from the bottom of the excavation as shown on Figure 3. These samples are discussed in more detail below.



Photograph 10: Collection of groundwater sample.

5.1 Confirmation Samples

BASELINE collected the following soil and groundwater samples after removal of the UST and dispenser island to evaluate whether a release from the UST, dispenser, fuel-conveyance pipe, or oil-water separator had occurred:

- Two soil samples (UST-CF-04R;W-8.5 and UST-CF-04R;E-8.5) from the sidewalls at the UST ends within the vadose zone at 8.5 feet bgs;
- One soil sample (UST-CF-04R;D-7.0) from under the dispenser at 7.0 feet bgs;[1]

[1] Note that the soil sample from under the dispenser island was at 7.0 feet bgs because during the removal of the previous UST in 1993, the area under the dispenser was over-excavated to a depth of

- Two soil samples (O/W-Separator-1 and O/W-Separator-2) from below the oil-water separator at 4.5 feet bgs; and
- One groundwater sample (UST-CF-04R;GW) from the groundwater, which was present at approximately 9.0 feet bgs.

The samples were submitted to Curtis & Tompkins, Ltd, a State-certified analytical laboratory, for the following analysis:

- Total Petroleum Hydrocarbons in the diesel ("TPH-d") and motor oil ("TPH-mo") ranges in accordance with Environmental Protection Agency ("EPA") Method 8015B and
- VOCs in accordance with EPA Method 8260B.

6. RESULTS SUMMARY

The analytical results for the soil and groundwater samples collected are described below and summarized on Table 1 and laboratory reports are included in Appendix F. The results were screened against the San Francisco Bay Regional Water Quality Control Board's ("Water Board") Environmental Screening Levels ("ESLs"), assuming a commercial/industrial land use where the shallow groundwater is not a drinking water source (Water Board, 2016).

6.1 Soil from Excavation Sidewall - UST-CF-04R;W-8.5 and UST-CF-04R;E-8.5

- TPH-d or TPH-mo was not detected at or above laboratory reporting limits in either sidewall sample.
- No VOC was reported at or above laboratory reporting limits in either sidewall sample.

6.2 Soil under Dispenser Island - UST CF-04R;D-7.0

- TPH-d was reported at 6.9 milligrams per kilogram ("mg/kg") and TPH-mo at 34 mg/kg in the soil sample collected under the dispenser island. These reported values are below the ESLs of 880 and 5,100 mg/kg, respectively.
- No VOC was reported at or above laboratory reporting limits in the soil sample collected under the dispenser island.

6.3 Soil underneath Oil-Water Separator - O/W-Separator-1 and O/W-Separator-2

- TPH-d was reported at 18 and 91 mg/kg in soil samples O/W-Separator-1 and O/W-Separator-2, respectively, collected under the oil-water separator. These reported values are below the TPH-d ESL of 880 mg/kg.
- TPH-mo was reported at 230 and 170 mg/kg in soil samples O/W-Separator-1 and O/W-Separator-2, respectively, collected under the oil-water separator. These reported values are below the TPH-mo ESL of 5,100 mg/kg.

---

approximately 5 feet and then backfilled with pea gravel. BASELINE collected the soil sample underneath the pea gravel.

- PCE was reported at 0.0041 and 0.0080 mg/kg in soil samples O/W-Separator-1 and O/W-Separator-2, respectively, collected under the oil-water separator. These reported values are below the PCE ESL of 0.42 mg/kg (based on leaching-to-groundwater pathway).
- No other VOC was reported at or above laboratory reporting limits in the soil samples collected under the oil-water separator.

6.4 Groundwater in Excavation - UST-CF-04R;GW

- The groundwater sample collected from the bottom of the excavation was reported to contain 190 micrograms per liter ("µg/L") TPH-d, which is below the ESL of 640 µg/L; the sample did not contain TPH-mo at or above the laboratory reporting limit of 280 µg/L which is below the ESL of 50,000 µg/L.
- The groundwater sample was reported to contain 12 µg/L PCE, 1.3 µg/L TCE, and 0.8 µg/L *cis*-1,2-DCE. The TCE and *cis*-1,2-DCE values are below the ESLs of 49 and 590 µg/L, respectively; the PCE concentration reported exceeds the PCE ESL of 8.9 µg/L (based on seafood ingestion pathway).
- No other VOC was reported at or above laboratory reporting limits in the groundwater sample.

7. EXCAVATION BACKFILL AND SURFACE RESTORATION

After receipt of the soil and groundwater analytical results, BASELINE provided a summary of the results to Steven Plunkett of ACDEH and Thomas Price of the DTSC. After review of the results, both agency approved backfill of the excavation (Appendix G). On 25 and 26 May 2016, the excavation was backfilled with the excavated pea gravel to approximately 3 feet below the surrounding surface elevation followed by controlled density fill to surrounding surface elevation. Final surface restoration will be completed following planned demolition of Building C-131.

8. CONCLUSIONS

Based on the results, it does not appear that there has been a release from the UST; the low detection of petroleum hydrocarbons in the diesel and motor oil ranges are likely residual impacts from the previous UST, which was removed in 1993, and are consistent with background levels at Berth 25.

The PCE, TCE, and *cis*-1,2-DCE concentrations in the groundwater are consistent with the known chlorinated solvent plume in the area. The low levels of PCE reported in the soil samples under the oil-water separator are likely the result of vapors migrating up from the groundwater. The existing O&M Agreement, Covenant to Restrict Use of Property, and measures in the RMP will continue to provide the necessary procedures and protocols to protect human health and the environment from the low levels of residual chemical or chemical compounds in the soil and groundwater at the site.

APPENDIX A

UST REMOVAL PERMIT

ALAMEDA COUNTY
DEPARTMENT OF ENVIRONMENTAL HEALTH
1131 HARBOR BAY PARKWAY
ALAMEDA, CA 94502-6577
PHONE (510) 567-6700

ACCEPTED
Underground Storage Tank Closure Permit Application
Alameda County Division of Hazardous Materials
1131 Harbor Bay Parkway, Suite 250
Alameda, CA 94502-6577

These closure/removal plans have been received and found to be acceptable and essentially meet the requirements of State and Local Health Laws. Changes to your closure plans indicated by this Department are to ensure compliance with State and local laws. The project proposed herein is now released for issuance of any required building permits for construction/destruction.

One copy of the accepted plans must be on the job and available to all contractors and craftsmen involved with the removal.

Any changes or alterations of these plans and specifications must be submitted to this Department and to the Fire and Building Inspections Department to determine if such changes meet the requirements of State and local laws.

Notify this Department at least 72 hours prior to the following required inspections:

X Removal of Tank(s) and Piping
X Sampling
X Final Inspection

Issuance of a) permit to operate, b) permanent site closure, is dependent on compliance with accepted plans and all applicable laws and regulations.

*THERE IS A FINANCIAL PENALTY FOR NOT CLEANING THESE INSPECTIONS:

11. Sample Collector

Name James McCarty P.E.

Company Baseline Environmental Consulting

Address 5900 Hollis Street

City, State Emeryville, CA. Zip 94608 Phone 510-420-8686

12. Laboratory

Name Mike Dahlquist

Company Curtis & Tompkins Ltd.

Address 2323 Fifth Street

City, State Berkeley, CA. Zip 94710

State Certification No. 2896

13. Have tank(s) or piping leaked in the past? Yes [ ] No [ ] Unknown [X]

If yes, describe:

14. Describe method(s) to be used for rendering tank(s) inert:

Remove any residual or freestanding liquids then rinse tank and piping with fresh clear water pump freestanding liquids and inert tank with dry ice at a ratio of 10 Lbs per 1,000 gals of volume.

Before tank(s) are pumped out and inerted, all associated piping must be flushed back into the tank(s). All accessible piping must then be removed. Inaccessible piping must be permanently plugged using grout.

The Bay Area Air Quality Management District, (415) 771-6000, along with local Fire and Building Departments, must also be contacted for tank removal permits. Fire departments typically require the use of a combustible gas indicator to verity tank inertness. **It is the contractor's responsibility to have a functional combustible gas indicator on-site to verity that the tank(s) is inerted.**

15. Tank History and Sampling Information ***(See Instructions)***

Tank		Material to be sampled (tank contents, soil, groundwater)	Location and Depth of Sample(s)
Capacity (gallons)	Use History include date last used (estimated)		
10,000 DIESEL	EST. LAST USE 2013	TANK CONTENTS SOIL GROUNDWATER IF PRESENT.	SEE BASELINE REPORT AND ACDEH MATRIX

One soil sample must be collected for every 20 linear feet of underground piping that is removed. A groundwater sample must be collected if any groundwater is present in the excavation.

Excavated/Stockpiled Soil	
Stockpiled Soil Volume (estimated)	Sampling Plan
16 yds pea gravel & soil	Attached / Baseline Plan

Stockpiled soil must be placed on bermed plastic and must be completely covered by plastic sheeting.

Will the excavated soil be returned to the excavation immediately after tank removal?

[ ] yes [ ] no [X] unknown

If yes, explain reasoning _____

_____

If unknown at this point in time, please be aware that **excavated soil may not be returned to the excavation without <u>prior</u> approval from this office. This means that the contractor, consultant, or responsible party must communicate with the Specialist IN ADVANCE of backfilling activities.**

16. Chemical methods and associated detection limits to be used for analyzing sample(s):

The Tri-Regional Board recommended minimum verification analyses and practical quantitation reporting limits shall be followed.

See Table 2, Recommended Minimum Verification Analyses for Underground Tank Leaks.

Contaminant Sought	EPA or Other Sample Preparation Method Number	EPA or Other Analysis Method Number	Method Detection Limit
ATTACHED BASELINE PLAN			

17. Submit Site Health and Safety Plan (See Instructions) ATTACHED

18. Submit Worker's Compensation Certificate copy ATTACHED

    Name of Insurer STAR INDEMNITY & LIABILITY COMPANY

19. Submit Plot Plan ***(See Instructions)***

20. Enclose Deposit (See Instructions)

21. **Report all leaks or contamination to this office within 5 days of discovery.** The written report shall be made on an Underground Storage Tank Unauthorized Leak/Contamination Site Report (URL) form.

22. **Submit a closure report to this office within 60 days of the tank removal. The closure report must contain all information listed in item 22 of the instructions.**

23. Submit State (Underground Storage Tank Permit Application) Forms A and B (one-B form for each UST to be removed) (mark box 8 for "tank removed" in the upper right hand corner).

I declare that to the best of my knowledge and belief that the statements and information provided above are correct and true.

I understand that information, in addition to that provided above, may be needed in order to obtain approval from the Environmental Protection Division and that no work is to begin on this project until this plan has been approved.

I understand that any changes in design, materials, or equipment will void this plan if prior approval is not obtained.

I understand that all work performed during this project will be done in compliance with all applicable OSHA (Occupational Safety and Health Administration) requirements concerning personnel health and safety. I understand that site and worker safety are solely the responsibility of the property owner or his agent and that this responsibility is not shared nor assumed by the County of Alameda.

Once I have received my stamped, accepted closure plan, I will contact the project Hazardous Materials Specialist at least three working days in advance of site work to schedule the required inspections.

Conditions for Approval of UST Removal and Closure
Port Of Oakland Berth 25-26
1599 Maritime Ave, Oakland

The following items are included in the Conditions of Approval by Item:

1. The tank shall be triple rinsed once it has been removed from the tank pit. Please remove the tank, place it on bermed plastic sheeting before introducing any liquids. Ensure that all liquids are contained within the berm area and appropriately disposed.

2. All contents that have accumulated in tank shall be removed and appropriately disposed under a uniform hazardous waste disposal manifest. All soil removed from the tank pit must be placed on plastic sheeting and shall be profiled for disposal using the attached minimum verification for diesel fuel, kerosene and jet fuel (previously provided). Please add naphthalene by EPA Method 8260 to the suite of analysis.

3. Dry ice shall be used to render the interior atmosphere of the UST inert and prior to the tank removal, please contact the City of Oakland Fire Department and confirm their presence during UST LEL monitoring.

4. Soil samples shall be collected from each end of the tank pit in native soil and beneath the UST(s) in native soil, approximately 12 feet below the ground surface. Should groundwater be encountered in the tank pit, a sample of the groundwater shall be collected and submitted for chemical analysis and soil samples shall be collected at the capillary fringe.

5. A copy of the UST removal permit must be available onsite, at all times, during the UST removal activities.

6. Prior to any UST removal activities provide ACDEH with 72 hours advanced notice.

7. A UST tank closure report shall be provided to the ACDEH within 60 days, after the UST tank removal has been completed.

MINIMUM VERIFICATION ANALYSES FOR UNDERGROUND STORAGE TANK SITES

Alameda County Department of Environmental Health

Certified Unified Program Agency (CUPA) and Local Oversight Program (LOP)

1131 Harbor Bay Parkway, Suite 250
Alameda, CA 94502-6577
(510) 567-6700 http://www.acgov.org/aceh/

This document describes required laboratory analyses for soil and groundwater samples collected for underground storage tank (UST) sites. These requirements replace those previously described in the Unidocs guidance document entitled, "Recommended Minimum Verification Analyses for Underground Storage Tank Leaks" (UN-078). Analytes may be added or deleted during site characterization and remediation with approval from ACDEH.

Material Stored	Analytes	Analytical Method	
		Soil	Groundwater
Gasoline Leaded or Unleaded	TPH as gasoline C5-C12	EPA 8260B/C	EPA 8260B/C
	BTEX, MTBE, TBA, naphthalene, EDB, EDC , and ethanol[2]	EPA 8260B/C	EPA 8260B/C
	Lead[3]	EPA 6010	No analysis[4]
Unknown Fuel	Same analytes as for gasoline	As above	As above
	TPH as diesel C12-C22	EPA 8015	EPA 8015
Diesel, Jet Fuel, Kerosene, or Fuel Oil	TPH specific to fuel (e.g. TPH as kerosene)	EPA 8015	EPA 8015
	BTEX, MTBE, and naphthalene	EPA 8260B/C	EPA 8260B/C
Chlorinated Solvents	Volatile Organic Compounds (full scan including BTEX, naphthalene, and chlorinated hydrocarbons)	EPA 8260B/C full scan	EPA 8260B/C full scan
	TPH as Stoddard Solvent C7-C12	EPA 8015	EPA 8015
Waste Oil, Used Oil, Unknown Oil, or Bunker Fuel	TPH as gasoline C5-C12	EPA 8260B/C	EPA 8260B/C
	TPH as diesel C12-C22	EPA 8015	EPA 8015
	TPH as motor oil C23-C32[5]	EPA 8015	No analysis[4]
	Volatile Organic Compounds (full scan including BTEX, MTBE, TBA, naphthalene, and chlorinated hydrocarbons)	EPA 8260B/C full scan	EPA 8260B/C full scan
	Metals: Cd, Cr, Pb, Ni, Zn	EPA 6010	No analysis[4]
	PCBs	EPA 8082A	EPA 8082A
	Semi Volatile Organic Compounds (including PAHs[6], pentachlorophenol, and creosote)	EPA 8270	EPA 8270

Notes:

1. Silica gel cleanup is not to be performed for any of the above analyses.
2. Benzene, Toluene, Ethylbenzene, Xylenes (BTEX), Methyl tertiary Butyl Ether (MTBE), Tert Butyl Alcohol (TBA), lead scavengers Ethylene Dibromide (EDB) and Ethylene Dichloride (EDC), and ethanol. Additional fuel oxygenates Tert amyl ether (TAME), di-isopropyl ether (DIPE), and Ethyl t-butyl ether (ETBE) may be added as optional analytes.
3. Organic lead may be added as an optional analyte at fuel leak sites where lead is an analyte.
4. No groundwater sample for metals or TPH as motor oil is required unless requested by ACEH.
5. For USTs that potentially contained oils that are not petroleum-based, analysis for hexane extractable materials using EPA Method 9071B for soil and EPA Method 1664 for water is required.
6. Polycyclic aromatic hydrocarbon (PAH) analysis must include naphthalene, acenaphthene, acenaphthylene, anthracene, chrysene, fluorine, fluoranthene, phenanthrene, pyrene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, benzo(a)anthracene, indeno(1,2,3-c,d)pyrene, dibenz(a,b)anthracene, and benzo(g,h,i)perylene.

PRE-WORK BRIEFING / STOP WORK AUTHORITY / FIT FOR DUTY

☐ **Stop Work Authority**: You have obligation and authority to report an unsafe situation to your site Supervisor.	
☐ **NRC Supervisor**: Ask each crew member if they have any accidents, incidents, near miss suggestions and are Fit For Duty.	**NRC Supervisor Signature Acknowledgment: _____ Date: _____**

EMERGENCY PROCEDURES

Hospital Name: Concentra Urgent Care	**Hospital Address/Phone:** 384 Embarcadero West, Oakland, CA 94607 510-465-9565	**Work Site Address:** 2500 7th Street, Oakland, CA (Berths 25/26)	
Meeting Location in Emergency:	To be decided by supervisor during pre- job safety meeting.		
Location of Emergency Equip:	**First Aid Kit**: NRC Vehicle	**Fire Extinguisher:** NRC Vehicle	**Eye Wash:** NRC Vehicle

DAILY SCOPE OF WORK / TASKS

1) Mobilize equipment from NRC yard and transport to job site.
2) Conduct pre- job safety briefing and review Health and Safety Plan (HASP). Set up and barricade off work area. Dawn established PPE.
3) Conduct ambient air monitoring of the area to verify no vapors or fumes are present. Air monitoring will go on for the duration of job with results documented.
4) Purge surrounding piping leading to the tanks to prevent run back during removal. Will be done with pressure washer.
5) Conduct lock out tag out. Disconnect piping; piping may need to be cut off for removal.
6) Pump out any residual diesel and liquids from tank into totes or drum

7) Excavate and remove pee gravel fill that is surrounding tank.
8) Remove tank from surrounding foundation. 3rd party crane and rigging contractor with NRC support.
9) Backfill foundation/ cap with pee gravel (once given clearance).
9) Decontaminate personnel and properly label/ placard any drums, totes, or bins.
10) Demobilize and transport any waste to pre- designated disposal facility.

JOB HAZARD ANALYSIS

(Separate JHA for Additional Tasks)

TASK	HAZARD	PREVENTION	RESP PROTECTION	PPE *Specify Polymer*
Mobilization	• Site Security • Slips / Trips / Falls • Traffic	• Conduct pre- use vehicle inspection. Report any defects to yard personnel. • Follow all traffic laws while mobilizing to site and demobilizing from site. • Site surfaces are irregular. • Signs and visual barriers will be in place during work hours, and when site is unattended. • If the site has traffic through and adjacent to the work area; limit all walking and access to set points. Assign employee to monitor work/ traffic area if necessary. • Any site hazards identified during pre-job assessment (i.e. adverse weather conditions) will be addressed as needed with Project Manager and Safety Manager if necessary.	☐ H.F AP ☐ F.F. AP Resp. Cartridge_____ ☐ Supplied Air ☐ SCBA	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Leather Gloves**
Delivery of Site Equipment & Supplies	• Back strains, and hand injuries from equipment and supplies • Injury from landing incorrectly	• Verify before lifting that material is secured. Do not throw equipment from truck, lift any object over 50lbs with assistance. If in doubt of the weight ask for HELP first. Lift properly with legs and maintain footing. • Use dolly if needed to transport heavy materials and equipment. • Must use ladder and 3 point contact when exiting from trailer/ truck – DO NOT jump off.	☐ H.F AP ☐ F.F. AP Resp. Cartridge_____ ☐ Supplied Air ☐ SCBA	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Leather Gloves**
Set up of Equipment and Job Site	• Pinch points • Sharp edges • Back injury • Slips, trips, falls • Equipment failure	• Properly inspect all equipment prior to beginning work. All defective equipment will be removed from work site/ service and reported.	☐ H.F AP ☐ F.F. AP Resp. Cartridge_____ ☐ Supplied Air	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest**

		• Fill out heavy machinery inspection form prior to using back hoe or excavator. • Assess work area prior to beginning work. Any hazards identified shall be reported to the site supervisor and mitigated/ eliminated. STOP work authority is in affect at all times. • Barricade off work area. Ensure pedestrians and general traffic stays out of work area. • Verify before lifting that material is secured. Do not throw equipment from truck, lift any object over 50lbs with assistance. If in doubt of the weight ask for HELP first. Lift properly with legs and maintain footing. • Communicate and hazards or concerns with site supervisor.	☐ SCBA	☒ **Leather Gloves** **Level D PPE**
Ambient Air Monitoring (MX6 5 Gas Meter) of Work Area	• Explosive conditions (Although no hot work is involved) • Asphyxiation	• Discuss results of air monitoring i.e. LEL, O2. Write down results in air monitoring log. • In the event that explosive / toxic / IDLH atmospheres are present, work shall cease and effective grounding on tank and equipment shall be installed and verified with an OHM meter. • If entry is required, fill out the proper air monitoring log and post at the entrance to the tank.	Full face or half face respirator depending on air monitoring test results and if entry is required.	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves** **Level D PPE**
Purge Piping (Pressure Washing) Leading Into Tank (Refer to Pressure Washing JHA)	• High Pressure water to skin injection • Splash back	• Pressure washer wand and equipment must never be aimed at any part of the body or person. • Pressure washer repair or fitting adjustments are done once the machine is off and all water supplies are removed. • De-pressurization of unit is done under extreme care wearing a full face shield with safety glasses. • All work requires full face shields and safety glasses. • Never aim at surfaces that are perpendicular to the operator, always work at an angle away from the cleaning target.	☐ H.F AP ☐ F.F. AP Resp. Cartridge_____ ☐ Supplied Air ☐ SCBA	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Face Shield** ☒ **Tyvec Suit** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Nitrile Gloves** **Level D PPE**

Heavy Machinery (excavator, backhoe, loader, compactor) See Back hoe JHA	• Equipment Failure • Slips / Trips / Falls • Overhead hazards • Moving Material • Struck by • Damage to equipment • LOTO • Dusty environment • Noise	• Conduct pre-operation inspection of all parts including connections and hydraulic lines. • Ensure grease and spare parts are available in case of failure. • Inspect fire extinguishers on equipment. • Never operate machinery outside of manufacturer's specification, never alter equipment. • Access machinery using handrails; maintain three points of contact at all times, ensure surfaces and boots are dry and free from debris. • Power lines, canopies and other structures on site may interfere with operation of equipment. Where these hazards cannot be removed or controlled, the operator is only to proceed with approval and direction from the site safety officer. • Use ground guides for equipment movement. • Ensure bucket is never overfilled, swing radius is clear. • Never walk under bucket. The operator must maintain communication with field Supervisor and awareness of the position of other personnel. • Ensure all Piping and energy sources have been properly LOTO prior to beginning excavation and removal work. • When equipment is not in use, be sure parking brake is set and equipment is stage on level ground and not blocking entry/exit paths. • Wear half face respirator w/ P-100 cartridge for the duration of excavation work. • Wet down dirt/ gravel piles to minimize dust in the air. • Wear hearing protection for the duration of work.	Half face with P-100 (HEPA) Cartridge	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves** **Level D PPE** *** Personnel air pumps may be provided by BASELINE Environmental. Works in dusty environment (due to the nature of the site) should have at least one personnel pump with cassette.**
All UST System Removal Activities	• Slips / Trips / Falls • Heat / cold stress • Biological hazards (insects, snakes, wildlife, vegetation)	• Keep work area free of excess material and debris. • Take breaks as needed.	Half face with P-100 (HEPA) Cartridge	☒ **Hard Hat** ☒ **Safety Glasses**

	• Traffic (including pedestrian) • Fire / explosion	• Inspect work areas when arriving onsite to identify hazards. • Utilize cones, signs, flags and/or other traffic control devices. • Setup exclusion zone surrounding work area. • Inspect area behind vehicle prior to backing and use spotter. • No smoking near work area (establish designated area off-site). • Ensure type 20-ABC full charged fire ext. • As site conditions / activities warrant, establish Hot Work Permit including air monitoring using direct-reading, real time instruments such as LEL/O2 meter. • Stop work if hazardous conditions are identified.		☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves** **Level D PPE**
Removal of Liquids	• Chemical Hazards • Flammable Atmosphere • Opening Tanks • Vacuum Truck Operations • Removal of liquids inside storage tank / piping may pose a flammable and toxic hazard • Trip / Fall Hazards • Noise	• Where a potential for exposure to gasoline or oils exist, employees must wear PPE, including eye/face protection and skin protection. • Pumps, vacuum truck may be used to reduce the possibility for employee exposure. • All lines entering the UST system will be drained and capped to prevent an uncontrolled flow of liquid into the system during removal operations. • Air monitoring for LEL will be contacted when activities result in a release of flammable vapors. • Fire extinguishers will be stationed to facilitate safe access in the event of a fire. • Tanks will be accessed through the associated manholes. • Tanks will be opened under direction of the Site Supervisor. All open manholes will be clearly marked with caution tape, and attended at all times. • Close access ports or manways after use to prevent trip / fall hazard. • A vacuum truck will be used to pump out residual liquids. The operator is experienced and qualified to perform the operations.	Half face with P-100 (HEPA) Cartridge	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves** **Level D PPE**

		• The vacuum truck will be bonded / grounded during operations to prevent static from ignited flammable vapors. • The operator will remain in close proximity to the vacuum truck to ensure motors are functioning properly and emergency shut off is available. Hazardous liquid will be stored in vacuum truck; the truck will be placarded as needed. • Wear hearing protection for the duration of pumping operations.		
Use of Cutting Saw (Removal of Pipes, etc.) and Hand Tools (Refer to Hand Tool JHA	• Pinch points • Improper/ deficient inspection • Not properly trained • Shock/ electrical • Strain-sprain • Difficult- positions • Cut-hazards • Dust • Noise	• Use proper holding and supporting techniques when turning wrenches, screw-drivers, and other torque-enhancing tools. • Inspect all tools prior to use. Defective tools will be removed from the work site. • Ensure any employee using tools has had the proper training on those tools. • Report any nicked or damaged electrical cords. Don't use tools that are missing ground plugs (unless they didn't have one to begin with). • Ensure proper direction and grip on plumbing fixtures prior to use of full body weight for counterbalance – use proper footing stance. • Verify correct pipelines prior to disassembly. • Wear hearing protection while using any tools that create noise. • Wear half face respirator w/ P-100 cartridge when using tools.	Half face with P-100 (HEPA) Cartridge	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves** **Level D PPE**
Loading of Misc. Debris (pipes, etc.)	• Falling or Flying Debris • Cuts from Jagged Debris • Strains/ Sprains • Slips, Trips, Falls	• Load all debris into buckets (if possible) • Leather gloves if loading by hand. • At no time shall debris be thrown into a bucket. • If debris is greater than 50 lbs., use buddy system to lift onto truck or ask the crane operators for assistance. • Check area for slip, trip, and fall hazards. Discuss with site supervisor and maintain situational awareness.	Half face with P-100 (HEPA) Cartridge	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves**

				Level D PPE
Hoisting UST From Foundation (3rd Party)	• Breaking of sling or rigging equipment • Losing control of tank • Tank rolling on flat bed • Overhead / suspended loads	• Keep hands clear of hoisting operation; do not use hands to align double sling as it is lifting tank. Use the correct sling to lift tank. DO NOT USE slings that are used to "dog" equipment to trailers. • Inspect all equipment prior to use. Any defective equipment will be removed from the job. • Use a safety factor of Load x 125% = Chain Selected. • Sound horn frequently during lifting operations. • Secure tag lines before lifting UST and AST. • Use wheel chocks to prevent rolling once UST and AST are placed on trailer.	Half face with P-100 (HEPA) Cartridge	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves** **Level D PPE**
Backfill as Necessary	• Noise • Slips, trips, falls • Pinch points • Strains/sprains • Struck by • Equipment failure • Dusty environment • Failure to LOTO surrounding piping, electrical lines, etc. • Strike hazards	• Use hearing protection for the duration of heavy machinery work. • Ensure all piping, electrical wires, etc. have been identified and properly de energized through LOTO. Do not start digging until verified. • Ensure area around excavator is been barricaded off. Assign someone to control traffic if needed. Inspect overhead/ strike hazards and make sure equipment is an established distance away. • Maintain situational awareness at all times when work is being conducted. Immediately STOP work if a hazard is identified and report to site supervisor. • Keep hands out of pinch points. • Use proper ergonomics when lifting or moving debris. • Maintain and establish communication with back hoe/ excavator operator for the duration of operations. • Stay clear of back hoe/ excavator during operations. • Wet down gravel/ dirt to minimize dust.	Half face with P-100 (HEPA) Cartridge	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves** **Level D PPE**

		• Ensure bins are properly labeled and secured.		
Drum/ Bin Handling	• Slip, Trips and Falls • Pinch Points • Sprains/ strains • Spill • Failure to label/ placard totes	• Use bung or speed wrench to tighten the container. • Align and hold tools firmly. • Use proper stance. • Wear gloves to guard against nicks in the steel lid. • Use dolly when moving drums. • Ask for help if moving totes with pallet jack. • If spill occurs, stop work and contain/ clean up spill area. • Stay clear anytime bin is being moved on job site. • Make sure all drums are properly labeled and placarded before leaving work site.	Half face with P-100 (HEPA) Cartridge	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves** **Level D PPE**
Decontaminate Equipment and Personnel	• Accidental exposure/ contamination • Spill	• Establish decontamination area before job begins in pre- job safety briefing. • Properly dispose of spent PPE in pre-labeled drums. • Protect areas from overspray of cleaners or wash-water.	Half face with P-100 (HEPA) Cartridge	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves** **Level D PPE**
Waste Hauling	• Shifting of load on flatbed truck • Falls from truck • Defective equipment	• Load must be tarp covered prior to moving vehicle. • Ensure metal appurtenances are properly secured to flatbed truck. Use properly rated straps. Inspect all straps prior to using them to secure tank. • Ensure straps are not securely fastened around jagged or sharp edges. If needed use a form of protection to prevent straps from becoming cut. • Access to the top of the truck for tarp operations must be done to ensure proper footing.	None	☒ **Hard Hat** ☒ **Safety Glasses** ☒ **Cotton Coveralls** ☒ **Steel Toe Boots** ☒ **Reflective Vest** ☒ **Leather Gloves** **Level D PPE**

		• Access to and from the vehicle must be three point contact.		
Demobilization and Transport Waste for Disposal	• Cuts from removing barrier tape • Improper labeling/ placarding • Picking up loose debris • Traffic	• Wear gloves at all times. • Enforce housekeeping regulations at all times. • Follow all traffic laws while driving. Use spotter when backing up. • Ensure all equipment is secure before leaving job site. • Ensure totes and drums are properly labeled/ placarded before leaving job site.	None	☒ Hard Hat ☒ Safety Glasses ☒ Cotton Coveralls ☒ Steel Toe Boots ☒ Reflective Vest ☒ Leather Gloves Level D PPE

APPENDIX B

UST AND OIL-WATER SEPARATOR DESIGN DRAWINGS

NOTES:

1. REMOVE EXISTING TANK, OIL/WATER SEPARATOR AND DISPENSER ISLAND INCLUDING BUT NOT LIMITED TO: THE PUMP, DISPENSER, FUEL AND WATER HOSE AND REEL; FUEL AND VENT PIPING AND ACCESSORIES; ELECTRICAL CONDUIT AND CONTROL BOX; CONCRETE SLABS ABOVE THE TANK AND OIL/WATER SEPARATOR AND ADJACENT TO THE FUEL ISLAND SEPARATOR; AND GUARD POSTS AND FOUNDATIONS AS SHOWN IN THE HATCHED AREA. REMOVAL ALL CONTAMINATED SOIL AND FILL AS DETERMINED BY THE ENGINEER.
2. ALL STRUCTURES ARE EXISTING UNLESS OTHERWISE NOTED
3. FURNISH AND INSTALL ENGINEERED FILL SUFFICIENT TO REPLACE THE REMOVED STRUCTURES AND SOIL UP TO 12" BELOW FINAL GRADE. FURNISH AND INSTALL 12" CDF ABOVE FILL.

AST Static Pressure Performance Test Report Form

Permit Number:		Test Company: AFFORDA TEST	
Site Name: PORTS AMERICA		Technician: ED STERNS	
Site Address: 1599 MARITIME		Certification Number	Expiration Date
City: OAKLAND CA	Zip:	District: BAY AREA	2016
Date/Time of Test: 11-04-15			

TEST INFORMATION				
Total number of nozzles: 1			Are the tanks manifolded? ☐ Yes ☒ No	
Phase I vapor recovery system executive order (as referenced on Permit to Operate)				2 PT
Phase I vapor recovery system configuration	☐ 2-point			
Phase II vapor recovery system executive order (as referenced on Permit to Operate)				BALANCE
Nitrogen introduction point	☐ Phase I vapor coupler	☐ Phase I vent line		☒ Phase II vapor riser
Pressure measuring device	☐ incline manometer	☒ digital manometer		☐ mechanical gauge
Calibration date for pressure measuring device (must be within 90 days of the test)				11-04-15
Ending value for digital manometer drift test if applicable (must be 0.01 in. w.c. or less)				0.00
Nitrogen introduction flow rate, F (must be between 1 and 5 CFM)				2CFH
Number of hoses with over 100 ml (balance hoses must be drained prior to testing)				0

TANK INFORMATION					
Tank No.	1	2	3	4	ALL
Product grade	87				
Actual tank capacity (gallons)	2000				
Gasoline volume (gallons)	1000				
Ullage (gallons)[1]	1000				
If tanks are not manifolded, number of nozzles	NA				

2 IN. W.C. STATIC PRESSURE TEST					
Test No.	1	2	3	4	5
Start time	1300				
Initial Pressure, inches of water column (in. w.c.)	2.0				
Pressure at one minute, in. w.c.	1.99				
Pressure at two minutes, in. w.c.	1.98				
Pressure at three minutes, in. w.c.	1.97				
Pressure at four minutes, in. w.c.	1.95				
Pressure at five minutes, in. w.c.	1.93				
Allowable minimum pressure, in. w.c.	**1.77**				
Pass / Fail	**PASS**				

NOTE: [1]The minimum ullage during the test shall be 25 percent of the tank capacity or 300 gallons, whichever is greater.

I declare, under penalty of perjury under the laws of the state of California that based on information and belief formed after reasonable inquiry, the statements and information provided in this document are true, accurate, and complete.

Appendix VI
MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: PORTS AMERICA Bldg. No.:

Site Address: 1599 MARITIME ST City: OAKLAND Zip:

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; *(check all that apply)*: ☒ **System set-up** ☒ **Alarm history report**

Technician Name (print): FELIX RAMIREZ Signature:

Certification No.: 5273934-UT License No: 08-1740

Testing Company Name: AFFORDA-TEST Phone No. (209) 744-0113

Testing Company Address: 416 2nd STREET GALT, CA 95632 Date of Testing/Servicing: 11-04-15

D. Results of Testing/Servicing

Software Version Installed: **324.01**

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g., modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☐ Yes	☐ No* ☒ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e., no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? %
☐ Yes	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments: FLAPPER VALVE IN DROP TUBE

F. In-Tank Gauging / SIR Equipment:

☒ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☒ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☒ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☒ Yes	☐ No*	Was accuracy of system product level readings tested?
☒ Yes	☐ No*	Was accuracy of system water level readings tested?
☒ Yes	☐ No*	Were all probes reinstalled properly?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H, below, describe how and when these deficiencies were or will be corrected.**

Line Leak Detectors (LLD):

☐ Check this box if LLDs are not installed.

Complete the following checklist:

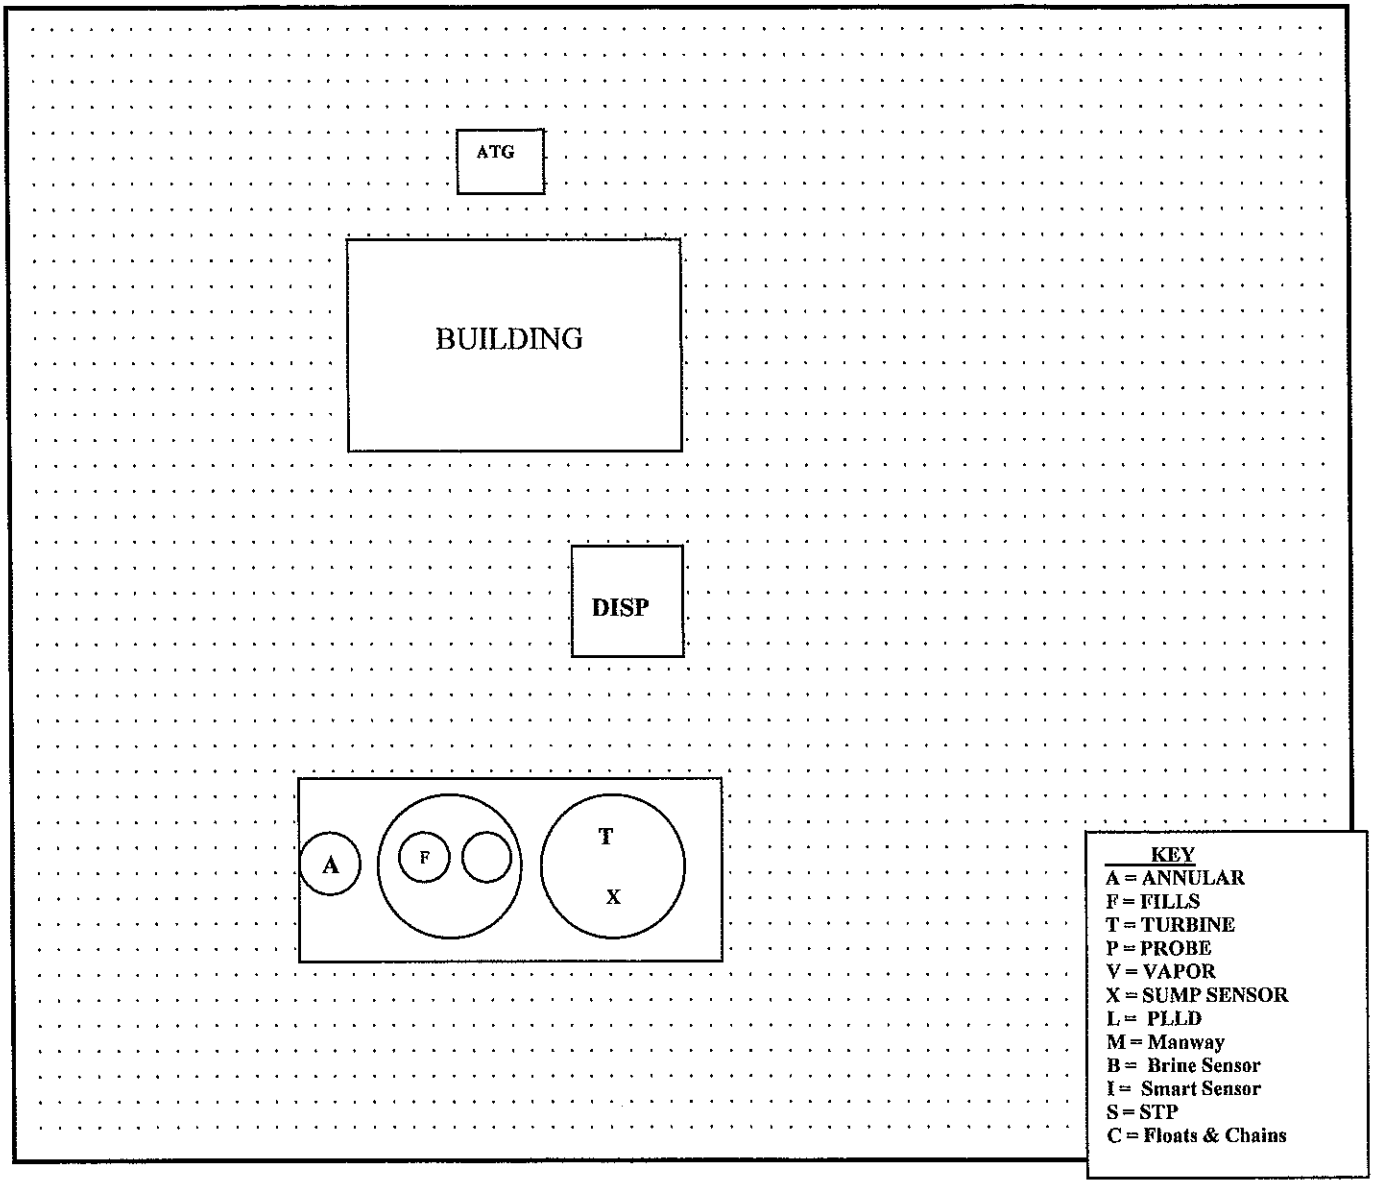
☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h.; ☐ 0.1 g.p.h ; ☐ 0.2 g.p.h.
☒ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H, below, describe how and when these deficiencies were or will be corrected.**

Comments:

UST Monitoring Site Plan

Site Address: PORTS AMERICA 1599 MARITIME STREET OAKLAND CA 94607



Date map was drawn: 1/4/2011.

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

	3	751	752a	752b	752c	753a	753b	753c

III. CERTIFICATION

On examination of the tank, I certify the tank is visually free from product, sludge, scale (thin, flaky residual of tank contents), rinseate and debris. I further certify that the information provided herein is true and accurate to the best of my knowledge.

SIGNATURE OF CERTIFIER

NAME OF CERTIFIER (Print) 754: Steven E. Hancock

TITLE OF CERTIFIER 755: Project Manager

ADDRESS 756: 1605 Ferry Point

CITY 757: Alameda, Ca.

PHONE 758:

DATE 759: 5/16/16

CERTIFICATION TIME: 13:30

STATUS OR AFFILIATION OF CERTIFYING PERSON

Certifier is a representative of the CUPA, authorized agency, or LIA: 760

☐ Yes ☒ No

Name of CUPA, authorized agency, or LIA: 761

If certifier is other than CUPA / LIA check appropriate box below: 762

- ☐ a. Certified Industrial Hygienist (CIH)
- ☐ b. Certified Safety Professional (CSP)
- ☐ c. Certified Marine Chemist (CMC)
- ☐ d. Registered Environmental Health Specialist (REHS)
- ☐ e. Professional Engineer (PE)
- ☐ f. Class II Registered Environmental Assessor
- ☒ g. Contractors' State License Board licensed contractor (with hazardous substance removal certification)

TANK PREVIOUSLY HELD FLAMMABLE OR COMBUSTIBLE MATERIALS 763

(If yes, the tank interior atmosphere shall be re-checked with a combustible gas indicator prior to work being conducted on the tank.) ☒ Yes ☐ No

CERTIFIER'S TANK MANAGEMENT INSTRUCTIONS FOR SCRAP DEALER, DISPOSAL FACILITY, ETC: 764

Tank was delivered to ECI for disposal manifest and disposal certification attached. 500 Lbs of dry ice were used.

Present were Oakland Fire – CUPA

A copy of this certificate shall accompany the tank to the recycling / disposal facility and be provided to the CUPA. If there is no CUPA, copies shall be submitted to the LIA and authorized agency; owner / operator of the tank system; removal contractor; and the recycling / disposal facility.

APPENDIX E

AIR MONITORING LOGS

FIELD LOG

Project name:	Berths 25/26 CF-04R Removal	Project no.:	12315-35
Logger:	WKS	Date:	5-6-16
Weather conditions:	showers Rained for hour before air monitoring		
Site personnel:	no precipitation during air monitoring		

Time	Field Activities	
	PID ppm	PM10 ug/m3
11:48 BG1	0.0	9.2
BG2	0.0	12.1
BG3	0.0	8.2
BG4	0.0	10.4

FIELDLOG.XLS (8/27/14)

FIELD LOG

page ___ of ___

Project name:	Berths 25/26 CF-04R Removal	Project no.:	12315-35
Logger:	Cem Atabek	Date:	5/9/16
Weather conditions:	Sunny		
Site personnel:	NRC, Parm Sandhu		

Time	Field Activities
1430	- arrive at site, NRC is pumping fuel out of UST into vac truck (5,000 gal) discuss schedule, take ambient readings with PID and Dust meter, fencing is still being installed, will begin breaking concrete tomorrow, estimated 2,000 gal in UST and 500 in AST.

Time	Station location	PID reading (ppm)	Dust reading (ug/m3)
15:00	S-1	0.0	17.2
15:02	S-2	0.0	16.1
15:03	S-3	0.0	16.2
15:05	S-4	0.0	21.8

Time	Field Activities
	- Wind is from the SW, PID readings in work zone also 0.0
15:30	- leave site

FIELDLOG.XLS (8/27/14)

FIELD LOG

page ___ of ___

Project name:	Berths 25/26 CF-04R Removal	Project no.:	12315-35
Logger:	Cam Atabek	Date:	5/10/16
Weather conditions:	Overcast		
Site personnel:	NRC, John Prall		

Time	Field Activities
900	- arrive at site, discuss status with John Prall, NRC is still removing fuel from UST.
935	- Calibrate PID meter, reads 53 ppm with C.F. set to 0.53 benzene
940	- Take PID readings in holes, used excavator to break holes
	1 - through asphalt at NW side of tank, reading = 0.0
	2 - through asphalt at SE side of tank, reading = 0.5 then 0.0
	3 - Through asphalt/concrete on SW side of oil water separator = 4.0 then drops slowly to 0.0
	4 - through concrete on N side of UST, reading = 1.2 then drops quickly to 0.0
	5 - through concrete on NE side of UST, reading = 7.1 then fluctuates between 4 and 5 for a few minutes, pretty steady around 4.5 slight petroleum odor in hole
	6 - through asphalt on NE side of UST, reading = 2 then drops to 1.8 where it stabilized for a few minutes
	7 - NW side of UST through concrete, reading = 3.0 then stabilizes at 0.4
1105	- leave site

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-909189
Unit Firmware Ver	V1.20
Running Mode	Hygiene Mode
Measure Type	Avg
Datalog Mode	Continuous
Datalog Type	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	RAE00000
User ID	1
Begin	5/14/2016 7:12
End	5/14/2016 15:21
Sample Period(s)	60
Number of Records	489
Sensor	VOC(ppm)
Span	100
Span 2	N/A
Low Alarm	5
High Alarm	1000
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Benzene
Calibration Time	5/14/2016 7:12
Peak	N/A
Min	N/A
Average	N/A

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-909189
Unit Firmware Ver	V1.20
Running Mode	Hygiene Mode
Measure Type	Avg
Datalog Mode	Continuous
Datalog Type	Auto
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	RAE00000
User ID	1
Begin	5/15/2016 7:01
End	5/15/2016 14:05
Sample Period(s)	60
Number of Records	424
Sensor	VOC(ppm)
Span	100
Span 2	N/A
Low Alarm	5
High Alarm	1000
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Benzene
Calibration Time	5/15/2016 7:01
Peak	N/A
Min	N/A
Average	N/A

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-909189
Unit Firmware Ver	V1.20

Running Mode	Hygiene Mode
Measure Type	Avg
Datalog Mode	Continuous
Datalog Type	Auto
Diagnostic Mode	No
Stop Reason	Power Down

Site ID	RAE00000
User ID	1

Begin	5/16/2016 8:28
End	5/16/2016 17:26
Sample Period(s)	60
Number of Records	538

Sensor	VOC(ppm)
Span	100
Span 2	N/A
Low Alarm	5
High Alarm	1000
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Benzene
Calibration Time	5/16/2016 8:27
Peak	N/A
Min	N/A
Average	N/A

APPENDIX F

LABORATORY ANALYTICAL REPORTS

Quality Control Checklist
for Review of Laboratory Report

Job No.: 12315-35 | Site: POO Berth 25, UST Removal

Laboratory: Curtis and Tompkins, Ltd. | Laboratory Report No: 276905

Report Date: 05/19/2016 | BASELINE Review By: JM

	Yes	No	NA
GENERAL QUESTIONS **(Describe "no" responses below in "comments" section. Contact the laboratory, as required, for further explanation or action on responses; document discussion in comments section.)**			
1. Is the laboratory report format consistent and legible throughout the report?	X		
1b. Are the sample and reported dates shown in the laboratory report correct?	X		
2a. Does the lab report include the original chain-of-custody form?	X		
2b. Were all samples appropriately analyzed as requested on the chain-of-custody form?	X		
3. Was the lab report signed and dated as being reviewed by the laboratory director, QA manager, or other appropriate personnel? (Some lab reports have signature spaces for each page). (This requirement also applies to any analyses subcontracted out by the laboratory)	X		
4a. Are preparation methods, cleanup methods (if applicable), and laboratory methods indicated for all analyses?	X		
4b. If additional analytes were requested as part of the reporting of the data for an analytical method, were these included in the lab report?			X
5. Are the units in the lab report provided for each analysis consistent throughout the report?	X		
6. Are the detection limits (DL) appropriate based on the intended use of the data? (e.g., DL below applicable MCLs for water quality issues?)	X		
7a. Are detection limits appropriate based on the analysis performed? (i.e., not elevated due to dilution effects)	X		
7b. If no, is an explanation provided by the laboratory?			X
8a. Were the samples analyzed within the appropriate holding time? (generally 2 weeks for volatiles, and up to 6 months for total metals)	X		
8b. If no, was it flagged in the report?			X
9. If samples were composited prior to analysis, does the lab report indicate which samples were composited for each analysis?			X
10a. Do the chromatograms confirm quantitative laboratory results? (petroleum hydrocarbons)	X		
10b. Is a standard chromatogram(s) included in the laboratory report?	X		
10c. Do the chromatograms confirm laboratory notes, if present (e.g., sample exhibits lighter hydrocarbon than standard)	X		
11. Are the results consistent with previous analytical results from the site? *(If no, contact the lab and request review/reanalysis of data, as appropriate)*	X		
12a. REVISED LAB REPORTS ONLY. Is the revised lab report or revised pages to a			

	Yes	No	NA
lab report signed and dated as being reviewed by the laboratory director, QA manager, or other appropriate personnel?			X
12b. REVISED LAB REPORTS ONLY. Does the case narrative indicate the date of revision and provide an explanation for the revision?			X
12c. REVISED LAB REPORTS ONLY. Does the revised lab report adequately address the problem(s), which triggered the need for a revision?			X
12d. REVISED LAB REPORTS ONLY. Are the data included in the revised report the same as data reported in the original report, except where the report was revised to correct incorrectly reported data?			X
QA/QC Questions Field/Laboratory Quality Control - Groundwater Analyses			
13. Are field blanks reported as ND? (groundwater samples) *A field blank is a sample of DI water, which is prepared in the field using the same collection and handling procedures as the other samples collected, and used to demonstrate that the sampling procedure has not contaminated the sample.*		X	
14. Are trip blanks reported as ND? (groundwater samples/volatile analyses) *A trip blank is a sample of contaminant-free matrix placed in an appropriate container by the lab and transported with the field samples collected. Provides information regarding positive interference introduced during sample transport, storage, preservation, and analysis. The sample is NOT opened in the field.*			X
15. Are duplicate sample results consistent with the original sample? (groundwater samples) *Field duplicates consist of two independent samples collected at the same sampling location during a single sampling event. Used to evaluate precision of the analytical data and sampling technique. (Differences between the duplicate and sample results may also be attributed to environmental variability).*			X
Batch Quality Control (Samples are batched together by matrix [soil, water] and analyses requested. A batch generally consists of 20 or fewer samples of the same matrix type, and is prepared using the same reagents, standards, procedures, and time frame as the samples. QC samples are run with each batch to assess performance of the entire measurement process.)			
16 Do the sample batch numbers and corresponding laboratory QA/QC batch numbers match?	X		
17a. Are method blanks (MB) for the analytical method(s) below the laboratory reporting limits? *Used to assess lab contamination and prevent false positive results. MBs should be ND.*	X		
17b. If no, is an explanation provided in the case narrative to validate the data?			X
17c. Are analytes which may be considered laboratory contaminants reported below the laboratory reporting limit? *Common lab contaminants include acetone, methylene chloride, diethylhexyl phthalate, and di-n-octyl phthalate.*	X		
17d. If no, was the laboratory contacted to determine whether reported analyte could be a potential laboratory contaminant and was an explanation included in the case narrative?			X

18. Are laboratory control samples (LCS) and LCS duplicate (LCSD) [a.k.a., Blank Spike (BS) and BS duplicates (BSD)] within laboratory reporting limits? Limits should be provided on the report. *LCS is a reagent blank spike with a representative selection of target analyte(s) and prepared in the same manner as the samples analyzed. The LCS should be spiked with the same analytes as the matrix spike (below). The LCS is free from interferences from the sample matrix and demonstrates the ability of the lab instruments to recover the target analytes. Accuracy (recovery information) is generally reported as % spike recovery; precision (reproducibility of results) between the LCS and LCSD is generally reported as the relative percent difference (RPD). LCS/LCSD can be run in addition to or in lieu of, matrix QC data.*	X		
19a. Are the Matrix QC data (i.e., MS/MSD) within laboratory limits? Limits should be provided on the lab report. *The lab selects a sample from the batch and analyzes a spike and a spike duplicate of that sample. Matrix QC data is used to obtain precision and accuracy information and is reported in the same manner as LCS/LCSD. If the MS/MSD fails, the results may still be considered valid if the MB and either the LCS/LCSD or BS/BSD is within the lab's limits (failure is probably due to matrix interference).*	X		
19b. If no, is the MB and either LCS/LCSD or BS/BSD within lab limits to validate the data?			X
Sample Quality Control			
20a. Are the surrogate spikes reported within the lab's acceptable recovery limits? *A surrogate is a non-target analyte, which is similar in chemical structure to the analyte(s) being analyzed for, and which is not commonly found in environmental samples. A known concentration of the surrogate is spike into the sample or QA sample prior to extraction or sample preparation. Results are usually reported as % recovery of the spike. Failure to meet lab's limits for primary and secondary surrogates results in rebatching and reanalysis of the sample; failure of only the primary or the secondary surrogate may be acceptable under certain circumstances. Failure generally is due to coelution with the sample matrix.*	X		
20b. If no, was the secondary surrogate reported within the lab's acceptable recovery limits?			X

CASE NARRATIVE

Laboratory number:	**276905**
Client:	**Baseline Environmental**
Project:	**12315-35**
Location:	**Port of Oakland, Berth 25-26**
Request Date:	**05/17/16**
Samples Received:	**05/17/16**

This data package contains sample and QC results for three soil samples and one water sample, requested for the above referenced project on 05/17/16. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B) Water:
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Soil:
UST-CF-04R;D-7.0 (lab # 276905-003) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:
No analytical problems were encountered.

COOLER RECEIPT CHECKLIST Curtis & Tompkins, Ltd.

Login # 276905 Date Received 5/17/16 Number of coolers 1
Client Baseline Project Port of Oakland, Berth 25-26

Date Opened 5/17 By (print) SC (sign)
Date Logged in + By (print) + (sign) +

1. Did cooler come with a shipping slip (airbill, etc) YES NO
Shipping info

2A. Were custody seals present? .... ☐ YES (circle) on cooler on samples ☒ NO
How many Name Date
2B. Were custody seals intact upon arrival? YES NO N/A
3. Were custody papers dry and intact when received? YES NO
4. Were custody papers filled out properly (ink, signed, etc)? YES NO
5. Is the project identifiable from custody papers? (If so fill out top of form) YES NO
6. Indicate the packing in cooler: (if other, describe)

☐ Bubble Wrap ☒ Foam blocks ☒ Bags ☐ None
☐ Cloth material ☐ Cardboard ☐ Styrofoam ☐ Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

Type of ice used: ☒ Wet ☐ Blue/Gel ☐ None Temp(°C) 4.4°

☐ Temperature blank(s) included? ☐ Thermometer# ☒ IR Gun# B

☐ Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? YES NO
If YES, what time were they transferred to freezer? 5/17/16 C 1025
9. Did all bottles arrive unbroken/unopened? YES NO
10. Are there any missing / extra samples? YES NO
11. Are samples in the appropriate containers for indicated tests? YES NO
12. Are sample labels present, in good condition and complete? YES NO
13. Do the sample labels agree with custody papers? YES NO
14. Was sufficient amount of sample sent for tests requested? YES NO
15. Are the samples appropriately preserved? YES NO N/A
16. Did you check preservatives for all bottles for each sample? YES NO N/A
17. Did you document your preservative check? (pH strip lot#) YES NO N/A
18. Did you change the hold time in LIMS for unpreserved VOAs? YES NO N/A
19. Did you change the hold time in LIMS for preserved terracores? YES NO N/A
20. Are bubbles > 6mm absent in VOA samples? YES NO N/A
21. Was the client contacted concerning this sample delivery? YES NO
If YES, Who was called? By Date:

Quality Control Checklist
for Review of Laboratory Report

Job No.: 12315-35 | Site: POO Berth 25, UST Removal

Laboratory: Curtis and Tompkins, Ltd. | Laboratory Report No: 276906

Report Date: 05/18/2016 | BASELINE Review By: JM

	Yes	No	NA
GENERAL QUESTIONS **(Describe "no" responses below in "comments" section. Contact the laboratory, as required, for further explanation or action on responses; document discussion in comments section.)**			
1. Is the laboratory report format consistent and legible throughout the report?	X		
1b. Are the sample and reported dates shown in the laboratory report correct?	X		
2a. Does the lab report include the original chain-of-custody form?	X		
2b. Were all samples appropriately analyzed as requested on the chain-of-custody form?	X		
3. Was the lab report signed and dated as being reviewed by the laboratory director, QA manager, or other appropriate personnel? (Some lab reports have signature spaces for each page). (This requirement also applies to any analyses subcontracted out by the laboratory)	X		
4a. Are preparation methods, cleanup methods (if applicable), and laboratory methods indicated for all analyses?	X		
4b. If additional analytes were requested as part of the reporting of the data for an analytical method, were these included in the lab report?			X
5. Are the units in the lab report provided for each analysis consistent throughout the report?	X		
6. Are the detection limits (DL) appropriate based on the intended use of the data? (e.g., DL below applicable MCLs for water quality issues?)	X		
7a. Are detection limits appropriate based on the analysis performed? (i.e., not elevated due to dilution effects)	X		
7b. If no, is an explanation provided by the laboratory?			X
8a. Were the samples analyzed within the appropriate holding time? (generally 2 weeks for volatiles, and up to 6 months for total metals)	X		
8b. If no, was it flagged in the report?			X
9. If samples were composited prior to analysis, does the lab report indicate which samples were composited for each analysis?			X
10a. Do the chromatograms confirm quantitative laboratory results? (petroleum hydrocarbons)	X		
10b. Is a standard chromatogram(s) included in the laboratory report?	X		
10c. Do the chromatograms confirm laboratory notes, if present (e.g., sample exhibits lighter hydrocarbon than standard)	X		
11. Are the results consistent with previous analytical results from the site? *(If no, contact the lab and request review/reanalysis of data, as appropriate)*	X		
12a. REVISED LAB REPORTS ONLY. Is the revised lab report or revised pages to a			

	Yes	No	NA
lab report signed and dated as being reviewed by the laboratory director, QA manager, or other appropriate personnel?			X
12b. REVISED LAB REPORTS ONLY. Does the case narrative indicate the date of revision and provide an explanation for the revision?			X
12c. REVISED LAB REPORTS ONLY. Does the revised lab report adequately address the problem(s), which triggered the need for a revision?			X
12d. REVISED LAB REPORTS ONLY. Are the data included in the revised report the same as data reported in the original report, except where the report was revised to correct incorrectly reported data?			X
QA/QC Questions Field/Laboratory Quality Control - Groundwater Analyses			
13. Are field blanks reported as ND? (groundwater samples) *A field blank is a sample of DI water, which is prepared in the field using the same collection and handling procedures as the other samples collected, and used to demonstrate that the sampling procedure has not contaminated the sample.*		X	
14. Are trip blanks reported as ND? (groundwater samples/volatile analyses) *A trip blank is a sample of contaminant-free matrix placed in an appropriate container by the lab and transported with the field samples collected. Provides information regarding positive interference introduced during sample transport, storage, preservation, and analysis. The sample is NOT opened in the field.*			X
15. Are duplicate sample results consistent with the original sample? (groundwater samples) *Field duplicates consist of two independent samples collected at the same sampling location during a single sampling event. Used to evaluate precision of the analytical data and sampling technique. (Differences between the duplicate and sample results may also be attributed to environmental variability).*			X
Batch Quality Control (Samples are batched together by matrix [soil, water] and analyses requested. A batch generally consists of 20 or fewer samples of the same matrix type, and is prepared using the same reagents, standards, procedures, and time frame as the samples. QC samples are run with each batch to assess performance of the entire measurement process.)			
16 Do the sample batch numbers and corresponding laboratory QA/QC batch numbers match?	X		
17a. Are method blanks (MB) for the analytical method(s) below the laboratory reporting limits? *Used to assess lab contamination and prevent false positive results. MBs should be ND.*	X		
17b. If no, is an explanation provided in the case narrative to validate the data?			X
17c. Are analytes which may be considered laboratory contaminants reported below the laboratory reporting limit? *Common lab contaminants include acetone, methylene chloride, diethylhexyl phthalate, and di-n-octyl phthalate.*	X		
17d. If no, was the laboratory contacted to determine whether reported analyte could be a potential laboratory contaminant and was an explanation included in the case narrative?			X

18. Are laboratory control samples (LCS) and LCS duplicate (LCSD) [a.k.a., Blank Spike (BS) and BS duplicates (BSD)] within laboratory reporting limits? Limits should be provided on the report. *LCS is a reagent blank spike with a representative selection of target analyte(s) and prepared in the same manner as the samples analyzed. The LCS should be spiked with the same analytes as the matrix spike (below). The LCS is free from interferences from the sample matrix and demonstrates the ability of the lab instruments to recover the target analytes. Accuracy (recovery information) is generally reported as % spike recovery; precision (reproducibility of results) between the LCS and LCSD is generally reported as the relative percent difference (RPD). LCS/LCSD can be run in addition to or in lieu of, matrix QC data.*	X		
19a. Are the Matrix QC data (i.e., MS/MSD) within laboratory limits? Limits should be provided on the lab report. *The lab selects a sample from the batch and analyzes a spike and a spike duplicate of that sample. Matrix QC data is used to obtain precision and accuracy information and is reported in the same manner as LCS/LCSD. If the MS/MSD fails, the results may still be considered valid if the MB and either the LCS/LCSD or BS/BSD is within the lab's limits (failure is probably due to matrix interference).*	X		
19b. If no, is the MB and either LCS/LCSD or BS/BSD within lab limits to validate the data?			X
Sample Quality Control			
20a. Are the surrogate spikes reported within the lab's acceptable recovery limits? *A surrogate is a non-target analyte, which is similar in chemical structure to the analyte(s) being analyzed for, and which is not commonly found in environmental samples. A known concentration of the surrogate is spike into the sample or QA sample prior to extraction or sample preparation. Results are usually reported as % recovery of the spike. Failure to meet lab's limits for primary and secondary surrogates results in rebatching and reanalysis of the sample; failure of only the primary or the secondary surrogate may be acceptable under certain circumstances. Failure generally is due to coelution with the sample matrix.*	X		
20b. If no, was the secondary surrogate reported within the lab's acceptable recovery limits?			X

CASE NARRATIVE

Laboratory number:	**276906**
Client:	**Baseline Environmental**
Project:	**12315-35**
Location:	**Port of Oakland, Berth 25-26**
Request Date:	**05/17/16**
Samples Received:	**05/17/16**

This data package contains sample and QC results for two soil samples, requested for the above referenced project on 05/17/16. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B):

O/W-SEPARATOR-1 (lab # 276906-001) and O/W-SEPARATOR-2 (lab # 276906-002) were diluted due to the dark and viscous nature of the sample extracts. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

No analytical problems were encountered.

Login # 276906 Date Received 5/17/16 Number of coolers 1
Client Baseline Project Port of Oakland, Berth 25-26

Date Opened 5/17 By (print) SL (sign)
Date Logged in ↓ By (print) ↓ (sign) ↓

1. Did cooler come with a shipping slip (airbill, etc) YES (NO)
Shipping info

2A. Were custody seals present? .... ☐ YES (circle) on cooler on samples ☒ NO
How many Name Date
2B. Were custody seals intact upon arrival? YES NO N/A
3. Were custody papers dry and intact when received? (YES) NO
4. Were custody papers filled out properly (ink, signed, etc)? (YES) NO
5. Is the project identifiable from custody papers? (If so fill out top of form) (YES) NO
6. Indicate the packing in cooler: (if other, describe)

☐ Bubble Wrap ☒ Foam blocks ☒ Bags ☐ None
☐ Cloth material ☐ Cardboard ☐ Styrofoam ☐ Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

Type of ice used: ☒ Wet ☐ Blue/Gel ☐ None Temp(°C) 4.4°

☐ Temperature blank(s) included? ☐ Thermometer# ☒ IR Gun#

☐ Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? (YES) NO
If YES, what time were they transferred to freezer? 5/17/16 @ 1030
9. Did all bottles arrive unbroken/unopened? (YES) NO
10. Are there any missing / extra samples? YES (NO)
11. Are samples in the appropriate containers for indicated tests? (YES) NO
12. Are sample labels present, in good condition and complete? (YES) NO
13. Do the sample labels agree with custody papers? (YES) NO
14. Was sufficient amount of sample sent for tests requested? (YES) NO
15. Are the samples appropriately preserved? YES NO (N/A)
16. Did you check preservatives for all bottles for each sample? YES NO (N/A)
17. Did you document your preservative check? (pH strip lot#) YES NO (N/A)
18. Did you change the hold time in LIMS for unpreserved VOAs? YES NO (N/A)
19. Did you change the hold time in LIMS for preserved terracores? (YES) NO N/A
20. Are bubbles > 6mm absent in VOA samples? YES NO (N/A)
21. Was the client contacted concerning this sample delivery? YES (NO)
If YES, Who was called? By Date:

Cc: "steven.plunkett@acgov.org" <steven.plunkett@acgov.org>, John Prall <JPrall@portoakland.com>, Yane Nordhav <yane@baseline-env.com>

John,

The Department of Toxic Substances Control has reviewed the email from Baseline Environmental Consulting (Baseline) email reports dated 5/19/16 and 5/21/16 which documented removal of an Underground Storage Tank (UST), dispenser and an Oil/Water Separator at the Port of Oakland Berths 25 and 26. The email report included laboratory reports which showed testing results for hydrocarbons and volatile organic compounds and a map which showed sampling locations for soil and groundwater. The report also proposed to backfill the excavation; DTSC concurs that the excavation can be backfilled.

Since the Alameda County Department of Environmental Health (ACDEH) is also providing oversight for this project, their approval should also be received prior to backfilling.

A report documenting the activities should be prepared and submitted for approval.

Thank you,

Tom Price

Cc: John Prall <JPrall@portoakland.com>, Yane Nordhav <yane@baseline-env.com>

John,

ACDEH agrees with a the recommendations put forth by DTSC, as such, please proceed with backfilling the excavation. Moreover, prior to providing an opinion as to the disposition of the UST removal, and potential no further action, a UST tank closure report is required. ACDEH looks forward to receiving the tank closure report within 60 days.

Thank you for your cooperation and attention to this matter.

Best Regards,

Steven Plunkett
