Fourth Quarter 2000 Groundwater Monitoring at  
Former Texaco Service Station  
3800 Broadway  
Oakland, CA

Monitoring performed on November 29, 2000

---

Groundwater Monitoring Report **001129-S-1**

This report covers the routine monitoring of groundwater wells at this Former Texaco facility. In accordance with standard procedures that conform to Regional Water Quality Control Board requirements, routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated purge volume (if applicable), elapsed evacuation time (if applicable), total volume of water removed (if applicable), and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater (if applicable) is, likewise, collected and transported to the Martinez Refining Company.

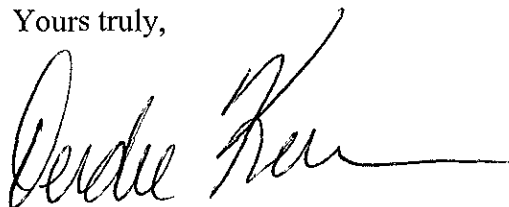

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL CONCENTRATIONS**. The full analytical report for the most recent samples and the field data sheets are attached to this report.

At a minimum, Blaine Tech Services, Inc. field personnel are certified on completion of a forty hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Yours truly,

A handwritten signature in black ink, appearing to read "Deidre Kerwin", with a long horizontal flourish extending to the right.

Deidre Kerwin  
Operations Manager

**Re: Well MW-11 Installation Report**  
Former Texaco Service Station  
3810 Broadway, Oakland, California

RECEIVED  
ENVIRONMENTAL  
PROTECTION  
DIVISION  
60 SEP 12 PM 2:56

Dear Mr. Chan:

On behalf of Equiva Services LLC (Equiva), Toxicchem Management Systems, Inc. (TOXICHEM) has prepared this report to document the installation of Well MW-11 at the site referenced above (Figures 1 and 2). The purpose of this work was to further define the extent of petroleum hydrocarbon-impacted groundwater at the site. Well installation was completed on August 4, 2000 in accordance with the your June 15, 2000 letter to Ms. Karen Petryna of Equiva.

A complete record of site background, previous investigations, conceptual release and transport model, and corrective action goals are presented in the *Corrective Action Plan* (TOXICHEM, November 15, 1998) and subsequent activities are presented in *Soil Excavation Report* (TOXICHEM, June 5, 2000). Included in this report is a discussion of the scope of work, findings, and conclusions and recommendations. The field and laboratory procedures, site health and safety plan, permits, boring logs, well development field data sheets, and soil disposal documentation are presented as Attachment A. The certified analytical report and chain-of-custody documentation are presented as Attachment B.

### SCOPE OF WORK

The scope of this investigation included the following activities:

- Installation of Well MW-11

### FINDINGS

TOXICHEM drilled one soil boring at the site on August 4, 2000. Soil samples were collected from the boring analyzed for total purgeable petroleum hydrocarbons (TPPH) and total extractable petroleum hydrocarbons (TEPH), benzene, toluene, ethylbenzene, and xylenes (BTEX compounds), and methyl tertiary butyl ether (MtBE). The boring was completed as a 2-inch diameter groundwater monitoring well (MW-11) that is screened from 15 to 40 feet bgs.

The well was developed by Blaine Tech Services, Inc. on August 8, 2000, and groundwater samples were collected from the well and sampled for TPPH, TEPH, and BTEX compounds on August 16, 2000. MtBE in groundwater was not analyzed since previous sampling data confirms that MtBE is not a chemical of concern at the site. The well has not yet been surveyed to mean sea level pending correction of several well deficiencies resulting from the property owner's construction activities and a complete re-survey of all wells. A summary of subsurface conditions, and soil and groundwater analytical data follows.

Copies of the field and laboratory procedures, the required permits, the Health and Safety Plan, boring logs, well development field data sheets, and soil disposal documentation are presented as Attachment A. A copy of the certified analytical report and chain-of-custody documentation is presented as Attachment B.

### **Subsurface Conditions**

Soils encountered during drilling consisted of sandy clays and silts, and sands. Groundwater was encountered at approximately 35 feet bgs, and then stabilized at approximately 28 feet bgs. A more complete description of the subsurface lithology is shown on the boring logs that are presented in Attachment A.

### **Soil Analytical Data**

Soil analytical data are summarized below and are presented in Table 1.

- TPPH, TEPH, BTEX compounds, and MtBE were not detected in any soil sample.

### **Groundwater Analytical Data**

Groundwater analytical data are summarized below and are presented in Table 2.

- TPPH and BTEX compounds were not detected in any groundwater sample.
- TEPH was detected at a concentration of 56.8 µg/L, however the laboratory noted that the chromatogram pattern was an unidentified hydrocarbon in the C9-C24 range.

### **CONCLUSIONS AND RECOMMENDATIONS**

Based on these results, TOXICHEM concludes that:

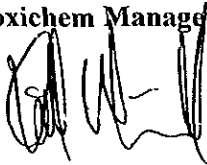

- The existing monitoring well network is adequate to monitor the extent of impacted groundwater.

TOXICHEM recommends continuing the existing groundwater monitoring and sampling program, and considering the use of the PVC piping array in the future if dissolved petroleum hydrocarbon concentrations do not attenuate. No further soil or groundwater investigation is recommended. Progress toward correcting the well deficiencies resulting from the property owner's construction activities will be reported in the next quarterly groundwater monitoring report. OK

If you have any questions regarding this report, please contact me at your convenience at (415) 681-8816.

Sincerely,

Toxichem Management Systems, Inc.

Keith Winemiller, P.E.  
Senior Engineer
