Subject: Second Quarter 2001 Groundwater Monitoring Report at 5050, 5051, and
5200 Coliseum Way and 750-50th Avenue, Oakland, California.
SLIC No. 01S0422 (BG)

Dear Ms. Graham:

Enclosed please find Clayton Group Services, Inc.'s (Clayton's) report for the Second Quarter 2001 Groundwater Monitoring Report at 5050, 5051, and 5200 Coliseum Way and 750-50th Avenue, Oakland, California. This report presents the results of Clayton's quarterly monitoring conducted in June 2001 at the subject property.

Clayton, under penalty of perjury as an authorized representative of Oakland 5051, LLC, presents this report as true and correct to the best of our knowledge. If you have any questions or comments, please call me at (925) 426-2686.

Sincerely,

A handwritten signature in black ink, appearing to read "Dwight R. Hoenig".

1.0 INTRODUCTION

Clayton Group Services, Inc. (Clayton), performed quarterly groundwater monitoring activities at the Coliseum Way Properties located at 5050, 5051, and 5200 Coliseum Way and 750-50th Avenue in Oakland, California (Figure 1 and Figure 2). The California Regional Water Quality Control Board - San Francisco Bay region (RWQCB), has requested that groundwater monitoring be performed at the subject properties to monitor the fate of petroleum hydrocarbons and metal ions.

The second quarter 2001 monitoring event included collecting depth to water measurements from 22 groundwater-monitoring wells and groundwater samples from 12 wells. Field measurements and groundwater monitoring well sampling were carried out on June 11, 2001. This report presents groundwater measurements recorded in the field and the results of laboratory analyses performed on groundwater samples collected for the second quarter 2001 monitoring event.

2.0 SITE SETTING

The 5050 and 5200 properties are located about 600 feet east of Interstate 880 and the 5051 property is located about 75 feet east of Interstate 880, in Oakland, California. The properties are bordered by stormwater drainage channels that flow into the San Leandro Bay, located approximately one-half mile to the west (Figure 1). The 5050 and 5200 properties encompass approximately 10 acres and the 5051 property is approximately 4.4 acres of relatively flat ground approximately 7 to 15 feet above mean sea level (amsl). Regionally, groundwater flows from the Oakland Hills west towards San Leandro Bay.

The subject properties and surrounding area have a long history of industrial usage. The 5050 property (which also includes the 750-50th Avenue property) is the location of former lead smelting operations (1879-1903), acids manufacturing (1903-1917), various chemical operations (1917-1926), lithopone manufacturing (1926-1963), vacant or razed property (1963-1974), and truck maintenance operations (1974 to the present). The 5051 property and the mini-storage facility at 5200 property were also part of the former lithopone manufacturing facility.

Tidally-influenced stormwater drainage channels border each of the subject properties (Figure 2). An open and unlined channel parallels the southeast property boundary of the 5051 and 5200 properties. Two subsurface culverts, the Courtland Creek Culvert and the Second Line G Culvert, parallel the northwest property boundaries of the 5050 property and the 750-50th Avenue property. The two culverts merge into an open concrete-lined channel south of the intersection of Coliseum Way and 50th Avenue. The drainage channel is open and concrete-lined along the northwestern perimeter of the 5051 property, and is open and unlined along the southwestern perimeter of the property, prior to flowing under Interstate 880.

3.0 FIELD ACTIVITIES

The following discussion outlines field activities used to obtain depth to water measurements, monitoring well samples, and other field data. Groundwater samples were collected from 12 monitoring wells (CW-1, CW-2, CW-6, CW-7, CW-12, CW-13, LF-5, LF-11, LF-12, MWA-1, MW-4, and MW-5). The sampling schedule is presented in Table 1.

3.1. DEPTH TO WATER MEASUREMENTS

Depth to water measurements were obtained from 22 wells selected for monitoring of the Coliseum Way Properties on June 11, 2001 prior to well purging and sampling activities. The accessible wells were opened and allowed to stabilize prior to measuring the depth to water. Measurements were obtained in a timely manner in order to minimize tidal effects. The depth to water in each monitoring well was measured with a water level indicator meter from the top of the monitoring well casing to the free water surface. The depth to water measurement was used to determine the groundwater elevation at each monitoring well location, and also to determine the groundwater purge volume for each monitoring well. The depth to water measurements were recorded onto groundwater sampling data sheets (Appendix A) that was used to calculate the groundwater elevations presented in Table 2.

3.2. MONITORING WELL SAMPLES

The monitoring wells selected for sampling were purged of approximately four well casing volumes of groundwater until the water quality parameters pH, temperature, and specific conductivity had stabilized. A peristaltic pump with new tubing was used to collect a groundwater sample from each select monitoring well. Groundwater samples were collected in appropriate laboratory-supplied containers. The containers were sealed, labeled with identifying information, entered onto a formal chain-of-custody document, and placed in a chilled ice-chest for transportation to the laboratory. The water quality parameters were recorded on the groundwater sampling data sheets, which are presented in Appendix A.

4.0 LABORATORY ANALYSES

Groundwater samples were collected from 12 monitoring wells and submitted to Curtis & Tompkins, Ltd. Analytical Laboratory located in Berkeley, California, a State of California certified laboratory, for analyses. The groundwater samples were analyzed by the following United States Environmental Protection Agency (USEPA) methods:

- EPA Methods 6010 and 7470 for California Assessment Manual (CAM-17) Total Metals, Laboratory Filtered and Preserved
- EPA Methods 160.1 for Total Dissolved Solids (TDS)
- EPA Method 8015 modified for Total Petroleum Hydrocarbons as Gasoline (TPH-G) MW-4, MWA-1, CW-2, CW-6, and CW-7 only.

- EPA Method 8020 for Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) for MW-4, MWA-1, CW-2, CW-6, and CW-7 only.
- EPA Method 8015 modified for Total Petroleum Hydrocarbons as Diesel (TPH-D) and Motor Oil (TPH-O) for LF-11, MWA-1, CW-2, CW-6, and CW-7 only.

5.0 SITE HYDROLOGY

The groundwater elevation at each monitored well location was determined by subtracting the depth to water measured in each monitoring well from its surveyed top of casing elevation. The groundwater elevations in the 5050, 5051 and 5200 Coliseum Way monitoring well network ranged from a low of 1.59 feet below mean sea level (-1.59 feet bmsl) in monitoring well MW-4 to a high of 7.01 feet above msl (7.01 feet amsl) in monitoring well CW-4. The general property groundwater flow direction is to the west at a hydraulic gradient of 0.002 feet per foot (ft/ft) as measured between wells LF-11 and MW-5. The average groundwater elevation was approximately 0.93 feet lower than the average elevation recorded on March 27, 2001. The subject property groundwater flow direction has flow components to the southwest and south at the 5051 and 5200 properties, which is apparently a result of drainage to the surrounding ditches. A potentiometric surface map was prepared from the June 11, 2001 groundwater elevation data and is presented as Figure 2.

6.0 GROUNDWATER ANALYTICAL RESULTS

The sampling schedule and analytical program for this monitoring event is presented in Table 1. The following discussion presents a summary of the laboratory analytical results.

6.1. PETROLEUM HYDROCARBONS

Six groundwater samples were submitted for petroleum hydrocarbon analyses (CW-2, CW-6, CW-7, LF-11, MWA-1, and MW-4). TPH-G results were below the laboratory-reporting limit of 0.05 milligrams per liter (mg/L) for four samples (MW-4, CW-2, CW-6, and CW-7) of the five samples analyzed. Only sample MWA-1 had detectable TPH-G at a concentration of 0.5 mg/L. Only sample MWA-1 contained any detectable BTEX, which was found to contain only benzene at 0.00059 mg/L.

Five groundwater samples (LF-11, MWA-1, CW-2, CW-6, and CW-7) were analyzed for TPH-D and TPH-O. TPH-D was detected in all five samples at concentrations ranging from 0.066 mg/L (MWA-1) to 0.43 mg/L (CW-6). It was noted in the laboratory analytical data sheets that petroleum hydrocarbons as TPH-D detected in groundwater samples CW-2, CW-6, CW-7 and LF-11 did not match the laboratory diesel fuel pattern standard. No TPH-O concentrations were detected in any of the five samples analyzed. A summary of petroleum hydrocarbons detected in groundwater is presented in Table 3.

6.2. METALS

Twelve groundwater samples were submitted for metals analyses. Fourteen of the seventeen CAM 17 metal analytes were detected above laboratory reporting limits during this monitoring event. Antimony, mercury, and vanadium were the only metals not detected in one or more samples. The highest concentration and corresponding monitoring well location for each detected metal ion are listed below:

Arsenic	to 2.8 mg/L	(CW-2)
Barium	to 790 mg/L	(CW-2)
Beryllium	to 0.045 mg/L	(LF-11)
Cadmium	to 86 mg/L	(LF-11)
Chromium	to 0.024 mg/L	(LF-11)
Cobalt	to 4.1 mg/L	(LF-5)
Copper	to 2.7 mg/L	(LF-11)
Lead	to 0.71 mg/L	(MWA-1)
Molybdenum	to 0.021 mg/L	(CW-7)
Nickel	to 13 mg/L	(LF-11)
Selenium	to 0.1 mg/L	(LF-5)
Silver	to 0.0056 mg/L	(MW-4)
Thallium	to 0.43 mg/L	(LF-5)
Zinc	to 24,000 mg/L	(LF-11)

Total Dissolved Solids (TDS) ranged in concentration from 810 mg/L in monitoring well CW-7 to 89,800 mg/L in monitoring well LF-11. Field measurements of groundwater pH levels ranged from 4.16 in monitoring well LF-11 to 10.3 in monitoring well CW-7.

A summary of metals, total dissolved solids (TDS), and pH detected in groundwater is presented in Table 4. Isoconcentration maps for arsenic, barium, cadmium, and zinc in groundwater are presented in Figures 3, 4, 5, and 6, respectively.

7.0 LIMITATIONS

The information and opinions rendered in this report was prepared on behalf of 5050 Coliseum LLC and Oakland 5051 LLC. The information and opinions included in this report were given in response to a specific scope of work and should be considered and implemented only in light of that particular scope of work. The services provided by Clayton in completing this project have been provided in a manner consistent with the normal standards of the profession. No other warranty, expressed or implied, is made.

5200	CW-13	30-Sep-98	7.47	6.27	B	1.20
		03-Dec-98		5.58		0.69
		23-Feb-99		4.87		0.71
		26-May-99		6.08		-1.21
		15-Sep-99		6.39		-0.31
		Dec 6 1999		6.49		-0.10
		29-Mar-00		5.22		1.27
		14-Dec-00		6.00		-0.78
		27-Mar-01		5.24		0.76
		11-Jun-01		5.63		-0.39

Notes: All measurements are with reference to top of PVC casing of each well.

-- = Not Measured

** approximately 0.10 feet of free product encountered in well casing.

1 = Sheen

2 = Sheen and Petroleum Odor

3 = Sulfur Odor

4 = Sheen and Sulfur Odor

a = Field error in numbering wells, CW-3 and CW-5 reversed

⁽¹⁾ = High Tide Measurement

⁽²⁾ = Low Tide Measurement

A = Well covered repaired and TOC resurveyed (10/12/98)

B = TOC resurveyed (10/12/98) - MW-6 discrepancy confirmed 12-3-98

Notes:

TEPH = Total Extractable Petroleum Hydrocarbons

TPH-D = Total Petroleum Hydrocarbons as Diesel

TPH-O = Total Petroleum Hydrocarbons as Motor Oil

TPH-G = Total Petroleum Hydrocarbons as Gasoline

MCL = Maximum Contaminant Levels for Drinking Water (CCR Title 22, Sections 64431 and 64444)

"--" = Not established

"<" = Analytes not detected at reporting limit

"-" = Not analyzed

(dup) = Duplicate Sample Collected by LFR

* = Field error resulted in switched well numbers (CW-3 & CW-5)

rl = TPH laboratory surrogate recovery low due to use of silica gel cleanup, standard is not adjusted for use of silica gel

FOOTNOTES:

(Sb) = Chemical Symbol for Metal (eg. Antimony)

TDS = Total dissolved solids

MCL = Maximum Contaminant Levels for Drinking Water (CCR Title 22, Sections 64431 and 64444)

-- = Not established

⁺ = Secondary Drinking Water Standard

⁺⁺ = Lead level established by the Federal Copper and Lead Rule for public drinking water suppliers

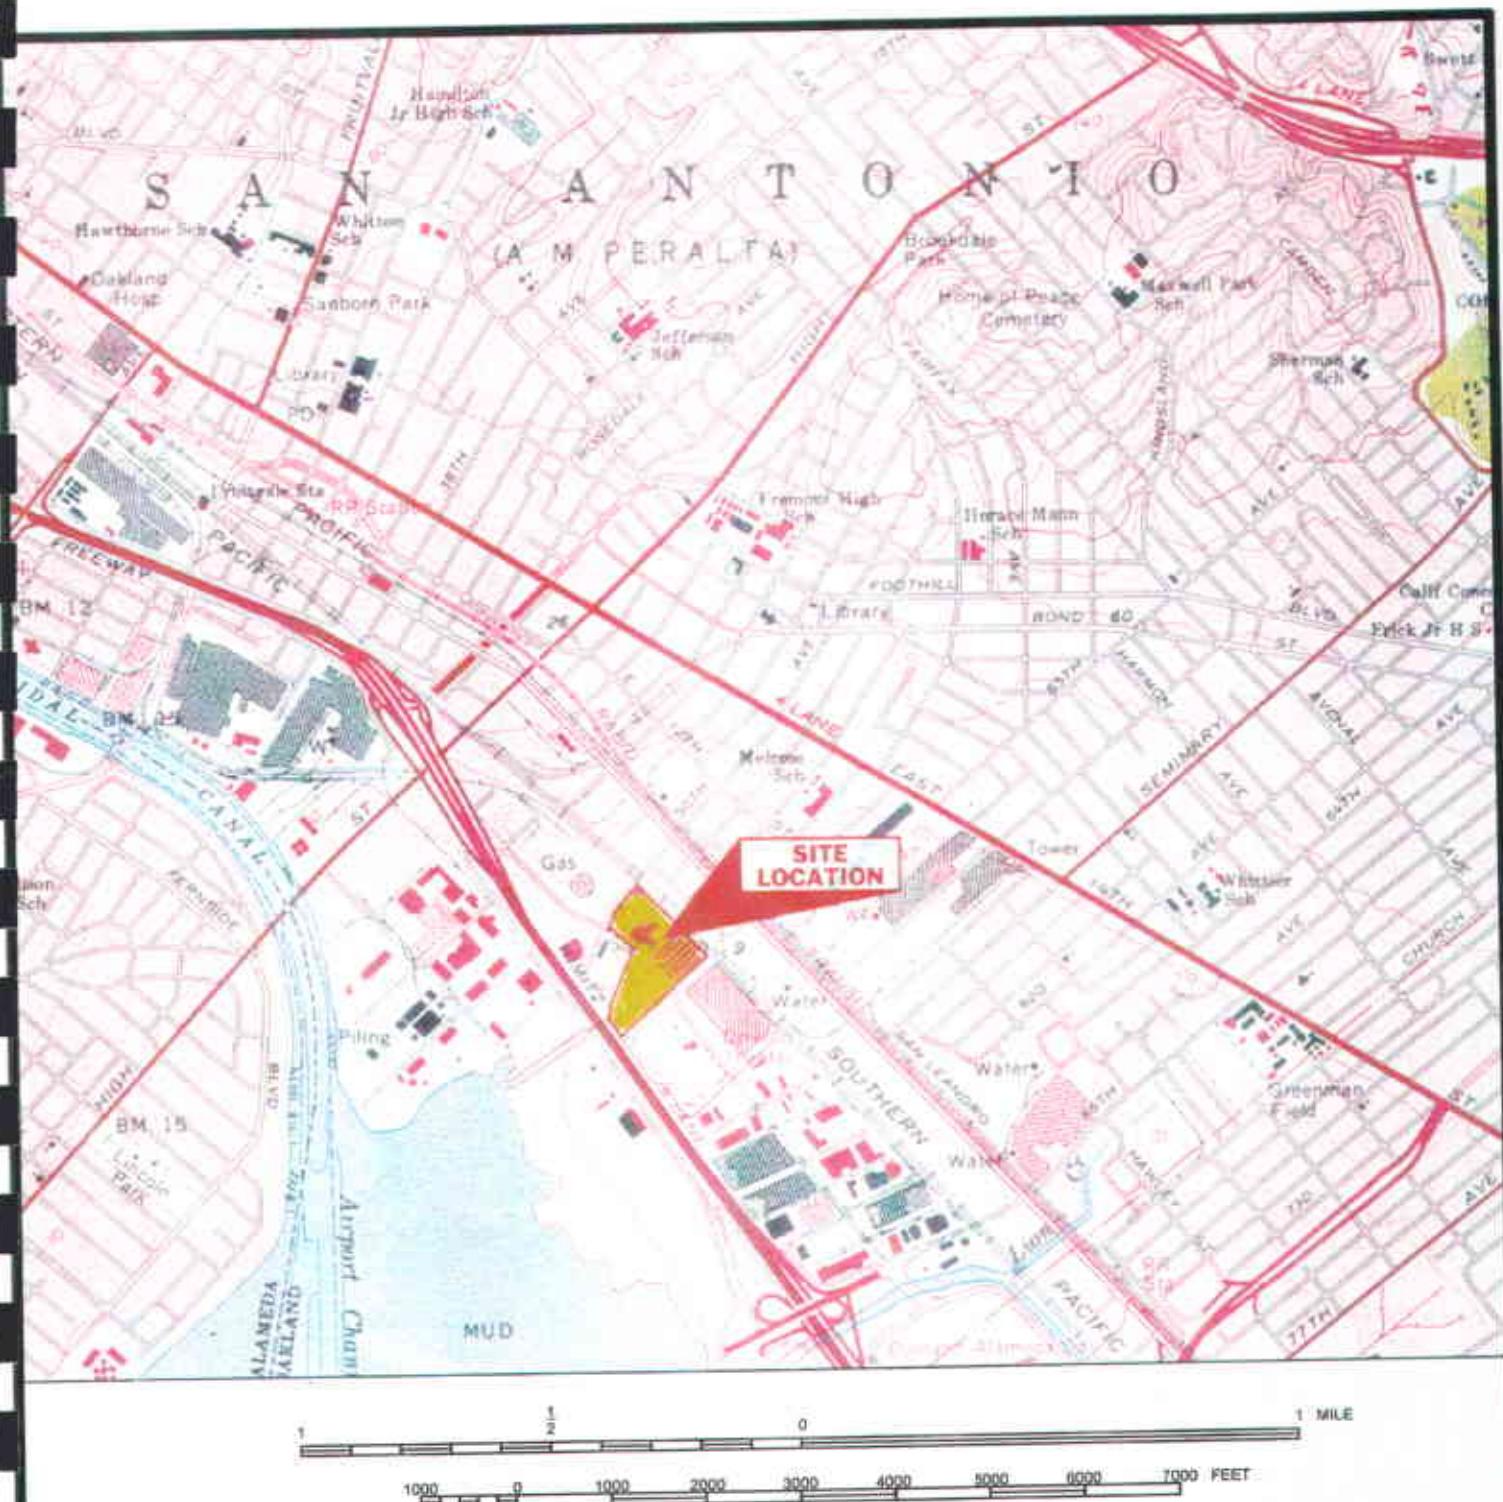

(SU) = Standard Units for pH, typically reported from field data, some are laboratory analysis

* = Sample date reported as 1992 in tables by LFR (Date corrected to 1991 by Clayton)

(1) = Labeling error in the field or laboratory may account for anomalous data reported for wells MW-2 and MW-3 (LFR)

(2) = Labeling error in the field, well numbers reversed (CW-3 and CW-5)

- = Not analyzed

CASE NARRATIVE

This hardcopy data package contains sample and QC results for twelve water samples that were received on June 11, 2001. All samples were received cold and intact.

TVH Gasoline / BTXE: High percent surrogate recovery was observed for Bromofluorobenzene in sample ID MWA-1 (C&T#152496-005) due to coelution with a hydrocarbon peak. No other analytical problems were encountered.

TEH: No analytical problems were encountered.

Metals: No analytical problems were encountered.

Wet Chemistry: No analytical problems were encountered.
