

12/17 : spoke to DON OLIVA REQUESTED
NOTIFICATION OF SAMPLING TIME. REQUESTED
REMEDIATION PLAN IN EVENT OF 100+ PPM TPH.

12/30 - PLAN REVIEW

- spoke to D. OLIVA. INFORMED HIM OF
48hr PRIOR NOTICE REPORT.

11/16/90 PG+E

Clancy asked about g.w. remediation. I said I couldn't say yes or no until I looked at qtrly monitoring results prior to April 1990 and if they've sampled since

Ask Steve about driving an investigation if next door is contaminating the site

Lead contamination around gas tank from lead base paint
- propose surface soil sampled TLCL & STCL
probably dispose of site - to cap, etc, would require risk assessment.

LUFT scoring sheet

Find NBD levels from Tri Regional and send to Clancy

Capping the site where TPH contamination exists will not solve the groundwater issue

Oil & grease - PG+E would need to show how it wasn't impacting groundwater.

G.W monitoring - continue to do so ~~for~~ on qtrly basis for another year, and then look at it.

→ Draft letter requesting remedial action plan for soil w/in 90 days to our office - how much soil involved, etc. how it will be treated, etc.
