meeting w/ Barney re: integration of ~~work~~ the 2801 Seventh St site to the 2800 (Berth 30) contam. During the vst removals no soil contam was noted. However ground water samples came up contaminated. It is suspected that the ground water contam. is associated with the <sup>powerline?</sup> powerline oil company excavation. The gradient is presumed to be westerly so it sounds like it could be plausible.

need to review comment & approve the March 22 work plan & incorporate invest of 2801 7th St. vst investig.
