Subject: RE: City of Paris -- workplan confirmation

Ellen,

Please advance at least two borings on Chestnut Street in addition to your proposed transects. As discussed, if a mobile laboratory is not available, rapid turnaround may be substituted to determine the need for step out borings.

Subject: City of Paris -- workplan confirmation

Barb,

To confirm our telephone discussion today, Taber Consultants will perform the following site investigation activities at 3516 Adeline Street which supplement the *Additional Site Investigation Work Plan dated January 22, 2010*, the *Additional Site Investigation Work Plan Addendum dated September 13, 2010*, the *January 7, 2011, letter revision to the Additional Site Investigation Work Plan* and the *February 1, 2011 letter regarding site investigation tools*:

- Advance at least three borings to groundwater on Chestnut Street in addition to approximately 8 planned soil borings and 8 contingency borings based on soil concentrations on 35th Street and under the freeway
- Use HPT and CPT probe technology to characterize site lithology and hydraulic properties 35th Street and Chestnut Street

- Use rapid turn around for soil analytical to determine need for step out locations (mobile analytical lab or overnight analysis at local lab)

We intend to do the field work at the site in late April or early May, based upon availability of scheduling drillers and personnel.

Thank you for your help and insight.

Ellen.
