Re: Fuel Leak Case No: RO0000133

Enclosed please find a request for a modification to the Additional Site Investigation Work Plan Addendum for the former City of Paris Cleaners site located at 3516 Adeline Street, Oakland, CA 94608 and dated January 7, 2011. This request was prepared by Taber Consultants of West Sacramento, California.

I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document are true and correct to the best of my knowledge.

Sincerely,

Paulette Satterley

Re: City of Paris RO#0000133,

Revisions to Additional Site Investigation Work Plan

Taber Project No. 051074

Dear Barb:

The owner of the property at 3516 Adeline Street is not in a position to meet the City of Oakland's requirements regarding monitoring well encroachment permits, therefore Taber Consultants requests modification of the Additional Site Investigation Work Plan as described below.

Taber Consultants intends to advance between 8 and 16 soil borings. To delineate the lateral distribution of the Stoddard Solvent (TPH-SS) plume, Taber Consultants will take both soil samples and grab groundwater samples from the borings. In 1998, the grab groundwater sample from soil boring EB-5 had a TPH-SS concentration of 760 ug/l. Taber Consultants intends to advance borings to the east and west of the approximate location of EB-5 to attempt to determine the plume boundaries to the north of the site. Taber Consultants may also want to advance soil borings to the north of 35th Street if analysis of samples indicates the TPH-SS plume has extended to below the freeway. Taber Consultants is contacting CalTrans in order to evaluate their encroachment permit requirements to determine the feasibility of stepping out the site investigation. Please see the attached Figure 1 for boring locations.

In order to determine TPH-SS concentrations in soil samples during the investigation at the site, Taber Consultants requests approval of an on-site mobile soil analytical laboratory. This set-up will allow Taber Consultants to step out the soil investigation if it appears that the TPH-SS plume has shifted since the site investigation conducted in 1998.

Sincerely,

Taber Consultants

Ellen Pyatt, MSc. Project Geologist

Thomas E. Ballard, P.G. #7299
