Subject: Conference call 6/8/07 for 1633 Harrison St., Oakland

Barney,

Thank you for the conference call on Friday, June 8, 2007. Here is a recap of our discussions and some modifications that were made to the planned work on June 11-12, 2007:

1. Nested probes (multi-depth probes within one borehole) are acceptable under DTSC/USEPA guidance. Therefore, two probes will be placed in each borehole at 5 fbg and 10 fbg.
2. Four vapor probes, within two boreholes, have been added to the planned work. One borehole will be near former well MW-4 and one borehole will be between former wells MW-2 and MW-3.
3. Soil samples will be collected at approximately 3 fbg, 5.5 fbg, and 10.5 fbg. All soil samples will be analyzed for TPHg, BTEX, ethanol, TBA, MTBE, DIPE, ETBE, TAME, EDB and HVOs (Carbon Tet; Chloroform; PCE; TCE; 1,2-DCE; t-1,2-DCE; c-1,2-DCE; 1,1,1-TCA; 1,2-DCA; 1,2-DCP; 1,1-DCE). All of these constituents are currently sampled in the semi-annual groundwater sampling events. One to two undisturbed samples will also be taken for physical analyses.

Once the installation and sampling of the vapor probes is completed, an investigation report will be submitted. A Remedial Action Plan will also be submitted and will include plans to remove impacted soil in a limited area, as defined by previous investigations, near well MW-7. A workplan will also be submitted separately for an offsite investigation.

Please let me know if you have any questions or comments. And thank you.
