**Attachments:** RO143 1633 Harrison St. siteplan.pdf

Hi Mark,

This email is concerning the Offsite SSI submittal date of 02/26/10 which includes reporting on the installation of well MW-17 and advancement of soil borings along Harrison St. and 17<sup>th</sup> St. As you know, we encountered many utilities whilst trying to install the well and borings. Attached is the updated site plans with the utilities marked, which includes additional utility locations along Harrison St. and 17<sup>th</sup> St.

As of right now, we have not scheduled the additional field work, but plan to complete the borings along Harrison St. in the sidewalk. The one boring along 17<sup>th</sup> St. will have to be completed right next to the curb due to the gas line corridor within the parking lane. If any other unknown obstructions are encountered in the parking lane, it will not be possible to advance that boring in the sidewalk due to communication and electrical lines within the sidewalk.

Once I have a final schedule, which may again be weekend work, I will email you with the details. Please feel free to contact me with any questions. Thank you.
