Subject: Site Visit to Mills College RO155
Entry Type: Note

Start: Mon 12/5/2011 10:30 AM
End: Mon 12/5/2011 11:15 AM
Duration: 45 minutes

10:30 arrive at Mills College and get directions to Corp Yard.

10:45 At Corp Yard, Talk to Pat and Mike McBride (Chief Engineer) about UST and Irrigation well. Neither of them are aware of the old well, but they tell me the historical use for some of the other buildings on-site including the Corp Yard.

Take pictures of Corporation Yard Building. It is being used as a nonair-conditioned warehouse for materials and chemicals used on-site. Clorox containers were observed just inside the building on a pallet.

The current UST is in the same location as the removed one and has the dispenser immediately to the west of it.

I look at some of the old aerial photographs and Pat tells me that the Mills Hall had an old food preparation area that was removed during remodeling after the UST was removed. She thought the Fuel tank was used for the kitchen. She gives me a map so I can get to the Mills Hall and I tell them I will send a copy of the water well location to them. Go to site and take pictures of the Mills Hall. Do not find the wells at the Toyon Meadow.
