

Schultz, Robert, Env. Health

Subject: Paul Supple, RO174
Entry Type: Phone call
Company: Atlantic Richfield Company

Start: Mon 11/8/2004 10:53 AM
End: Mon 11/8/2004 10:53 AM
Duration: 0 hours

Contacts: Paul Supple

left v-mail re. prioritization spreadsheet and hesperian workplan comments
asked for return call

return call from Paul at 3:30PM

Scott Robinson is preparing response to workplan addendum request

there are questions re. zoning for the site, also thrifty oil owns the site so BP is not in a position to dictate future site use -
likely that thrifty will want unrestricted

also, Paul spoke with URS re. spreadsheet

they will take a crack at it with MTBE, benzene, location infor to prioritize sites

CONTACT LOG (20200 Hesperian, Hayward)

- 09/17/99 . Called Ray Friedrichson, Thrifty Oil, (562) 921-3581 # 376, to discuss the extreme and unusual groundwater flow variations at the site.
- 09/27/99 Ray Friedrichson left message stating that g.w. has always had same gradient, even when ARCO was ~~not~~ conducting investigations at the site.
- 10/08/99 Called Ray Friedrichson and asked him to submit an interpretation of the varying groundwater flow directions on site & the site geology (is there a former stream channel in area?)
- 10/08/99 looked at boring logs w/ Ray Friedrichson & discussed the possibility of a former stream channel on the property.
- 11/11/99 Glen Vanderveen, 510-740-5807, consultant to ARCO requested that I either meet w/ or conference call w/ him & Paul Supple to discuss the required work.
- 11/12/99 I called & left message for Glen Vanderveen that I would be available to meet w/ them next week between Nov 16-19 '99.

CONTACT LOG (20200 Hesperian, Hayward)

- 05/26/99 Spoke to Ray Friedrichson, Thrifty Oil, (562) 921-3581 #376, after reviewing his workplan. He will meet me out at site tomorrow at 9:30 AM for the sampling.
- 05/26/99 Called Rob Weston, Alameda County, and told him that the meeting time was changed from 9 AM to 9:30 AM at the site tomorrow, 5/27/99.
- 07/15/99 Called Ray Friedrichson, Thrifty Oil, 562-921-3581 #376 to find out what he got in his soil sample analysis from the 5/27/99 sampling event. I haven't heard from him since the sample date. Requested that he call me back.
- 07/16/99 Ray Friedrichson called back. He did have his soil samples analyzed & two of them came back w/ high levels of MTBE. Will send those results w/ the next gaily report w/in next month.
- 09/03/99 Called Paul Supnal, ARCO, 925-299-8892 & gave him heads up for letter regarding soil remediation.
- 09/10/99 Glen Vanderveen, IT Corp., 510-740-5807, called to say that he is Paul Supnal's, ARCO's, consultant. Discussed case. He requested that I fax him table w/ g.w. monitoring results, analytical results from the dispenser sampling, and a site figure. Fax: 510-663-3315

CONTACT LOG (20200 Hesperian, Hayward)

05/03/99

Called Ray Friedrichson, Thrifty Oil, (562) 921-3581 #376. He stated that the most recent quarterly g.w. monitoring report was sent to the County & that he'd submit a 2-pg. workplan outlining sampling below the dispensers. I told him that it must provide sampling protocol, such as sample containers, being at 4°C, etc. Tentatively set dates for sampling on May 25 or 26 '99. Told him I'd call him back tomorrow after confirming date w/ Rob Weston.

05/03/99

Left message for Rob Weston, ACD&H, to find out whether he can make it out to site on either May 25 or 26 '99.

05/04/99

Rob Weston confirmed that May 25 or 26 '99 is available.

05/04/99

Called Ray Friedrichson, Thrifty Oil. Although we tentatively scheduled the field work for May 25, Tom @ 9AM, we will call back by tomorrow to confirm.

05/06/99

Ray Friedrichson called & stated that he could only make it for field sampling on May 27 or 28 '99 in the morning.

05/10/99

Rob Weston stated that May 27 was open for him.

05/10/99

Call Mr. Friedrichson & left message requesting that he set the field work for May 27 '99, 9 AM.

05/18/99

Called Ray Friedrichson, Thrifty Oil, (562) 921-3581 #376. Requested he submit short w.p. for planned sampling on May 27 '99 to me today through Fax.

CONTACT LOG (2020 Hesperian, Hayward)

04/05/99

Raymond Friedrichson, Thrifty Oil, (562) 921-3581, #376, returned my call. He stated that the recent release is really ARCO's responsibility since ARCO currently operates the site. He will contact Paul Supple, ARCO, to see whether a leak report was filed and will call me back to make arrangements to meet out at site and inspect dispensers and to determine soil sample locations & discuss excavation of contaminated. Mr. Friedrichson stated that he thought the dispensers had collection pans underneath, but I stated that Mr. Weston stated that there was no containment.

04/09/99

Raymond Friedrichson, Thrifty Oil, (562) 921-3581 #376 called to say that he is preparing a workplan to address the inspection & sampling of soil below the dispenser areas, in response to the reported leak by Rob Weston, Alameda County. Mr. Friedrichson stated that the ARCO maintenance person had no record of any leaks or repairs.

04/14/99

I spoke to Rob Weston re leak. He said that ARCO maintenance may not know of leak, but H.B. Covey, contractors, were out there w/ Rob Weston when leak was observed. Mr. Weston will go out to site w/ me at time of sampling to identify formerly leaking dispensers.

04/14/99

Discussed required work w/ Ray Friedrichson & my discussion w/ Rob Weston. Workplan will be submitted w/ next g.w. monitoring report by end of April '99.

CONTACT LOG (20200 Hesperian, Hayward)

- 12/11/98 Rob Weston, Senior Hazardous Materials Specialist w/ Alameda County, notified me that a leak had occurred at the site. The leak was apparently observed during tank upgrades and Mr. Weston stated that he reported the leak.
- 01/05/98 Left message for Raymond Friedrichsen, Thrifty Oil, (562) 921-3581 Ext. 376 after reviewing the monitoring report for the 10/22/98 Sampling Event. I mentioned that based on our split sample results and their lab analysis results that it appears the site can be closed. However, this office is awaiting additional information on the leak that Rob Weston reported to us on 12/11/98. I provided Mr. Weston's phone # to Mr. Friedrichsen - (510) 567-6781
- 04/05/99 Called & left message for Raymond Friedrichsen, ~~Thrifty Oil~~ Ext. 376, inquiring about what he found out about leak, reported by Rob Weston. Mr. Weston stated that in December he saw a shear valve on dispenser continuously dripping gas directly onto the sand fill which is connected to the native soil. In January 99, when he returned, this valve was no longer leaking. I stated that soil samples will need to be collected below these fittings and requested that he return my call so that we can make arrangements to meet, take a look at valves, & collect soil samples.

Contact Log (2020 Hesperian, Hayward)

11/00/98

left message for Chris Panaitescu, Thrifty Oil, (572) 921-3581. He sent me g.w. monitoring report, dated Oct 22 '98, & requested closure, however, the results of the Oct 22 '98 sampling event were not included in this report. I explained that the results of that sampling event, which included analysis for all organics & lead scavenger, using Method 8260 & 8010, must be submitted prior to this office considering the site for closure.

11/00/98

left message for Ray Friedrichsen, Thrifty Oil, inquiring about confusion by Mr. Panaitescu and explaining same as above. Requested that Mr. Friedrichsen call me back w/ status on when monitoring report for the Oct 22, '98 Sampling event would be submitted.

11/10/98

Chris Panaitescu returned my call and stated that they had mistakenly requested closure in the last g.w. report. They are aware of the Oct 22 '98 sampling event, and the MTBE analysis using ^{Method} 8260, and will submit a report documenting the results of this sampling event within the next month.

Contact Log (2020 Hesperian Blvd.)

10/02/98 Bryan Van Wagner, Thrifty Oil, called & left message. (562) 923-9876.

10/06/98 Called Bryan Van Wagner and left message requesting that we set a date for g.w. sampling, so that I can meet him out at site to collect split samples.

10/06/98 ~~Raymond Friedrichson~~, Thrifty Oil, called back. He is the main contact. His address is:

13539 East Foster Rd.

Santa Fe Springs, CA 90670

Discussed site and requirements.

Mr. Friedrichson stated that additional g.w. monitoring was conducted on 7/31/97; 10/22/97; 01/28/98; 4/22/98; & 6/18/98.

10/19/98 Spoke to Jeff, Thrifty Oil. Groundwater sampling will be conducted on 10/21-22/98, Wed & Thurs. Requested that they wait 'til Thurs, 10/22/98 to collect g.w. samples from Wells MW-1 - MW-3 and Well AP-1 so that I can be out there to collect split samples. Surber, sampler, will call me to let me know what time I should be out there. His pager# is 510-734-7059. (Probably ~7:30 AM).

Jan 24, 1996 PERP Meeting Notes

Airport Alliance

- Constructed 1960s - USTs most probably single-celled
- Wells installed in 1993 (?)
- 1994 4 borings advanced by Certified

Epton / Injaco Proposal

- TPH&
- Continue joint monitoring
- Assist Alliance RP to get into Compliance by getting him "intouch" w/a specialized Consultant who would assist in getting permits in "proper order" & application to Cleanup Fund & Loan Prog. to remove USTs.

Phone Log (20200 Resperian Blvd)

11/9/95

Left msg. for Ray Friedrichsen to call (310) 923-9876 X376 regarding status of quarterly report for Sept 1995 sampling event.

2/5/96

Left msg for Ray Friedrichsen to call re: Clarification of current property owner.

09/28/98

Left message for Chuck Heddler, RWQCB, (510) 622-2433. Asked whether there were any guidelines stipulating that RPs could not conduct their own investigations.

09/28/98

Chuck Heddler, RWQCB, called back and stated that there are no such requirements.

09/28/98

Called Environmental Health Lab, Newton Leung, and inquired whether they are certified to conduct TPH, BTEX, and MTBE analysis. He said they could using Method 8020. This lab will do the analysis for free and supply the VOA vials.

09/28/98

Left a message for Bryan Van Wagner, Thrifty Oil, at (562) 923-9876. Explained that another round of groundwater analysis will need to be conducted for all the site wells, and they will need to give me advance notice so that I can be out at site to collect split samples. Split samples need to be collected to validate the rather sudden decrease in contaminant concentrations. Also, future MTBE analysis will need to be done using Method 8260 per RWQCB guidelines.

515793

I spoke to Hugh Murphy would said
that the Hayward Fire Dept. is requiring
that the former Shell station install
wells to determine whether any
contamination resulting from their
site at the corner of West "A" St.
and Hesperian. Mr. Murphy stated
that, when the tanks were removed
from the site, there was soil
contamination identified.

John Stein

PHONE LOG (20200 HESPERIAN BLVD.)

10/28/93 JOEL COFFMAN, GEO STRATEGIES (510) 551-8777
& Juliet Shui

Mr. Coffman said that he would submit the RNP soon, along w/ information on the remediation systems being installed.

8/8/95 see file notes on conversation w/ RP'S

8/23/95 Returned Ray Friedrichsen's call. He said ULR is in the mail - I told him the state did have a record of this site (Rpt date 11/4/86). He also indicated that they are coordinating w/ ARCO to replace their Carbon Canisters w/ the SVE system at one time. They ~~have~~ ^{plan to} continue the remediation system w/out interruption. He said Thrifty is taking over QMR'S as of Sept 1 & ARCO is responsible prior to 9/1/95. He indicated a letter will follow.

9/15/95 spoke w/ Ray Friedrichsen w/ Thrifty ~~at~~ who indicated Earth Management will be the consultant for this site. He proposes to complete GWM by 9/30 & I asked that a report be forwarded by 10/15. Thrifty does not want to start up SVE until they have recent GW data - this will help to determine if a carbon filter or a burner should be used. I asked for a proposal.

3/9/95 meeting w/ Hugh Murphy & Madhulla Logan

→ Check into MW →

A-8 - Is it screened properly - require

★ → Hugh requests ARCO to continue the cooperative gradient & isocone maps for the 5 service stations because he believes it is important to look at how ARCO's remediation system affects gw gradient.

→ Have ARCO continue joint gw monitoring until they prove they are completely not involved w/ Cont from Alliance. Possibly hydro punch study in vicinity of A-8.

0.82 foot
1/80
0.28

→ Write a letter to ARCO - Call 1st - Re A-8 & letter Hugh Murphy is sending out.

3/16/95 Left a message w/ Mike Whelan w

3/17/95 Mike Whelan called to say he will be out of town until April 3 & we can discuss this site then

Re Conversation 3/9/93

Cliff Cornett, GSI (510) 352-4800
+ Robert Sun

RE: 20000 Phosphate Blvd., San Lorenzo

I spoke to Mr. Cornett regarding the work plan, dated March 4, 93. He said that a minimum of 2 soil samples from each of the berings will be analyzed.

He also clarified that if some of the berings, A-A, A-B, or A-C, serve ^{as} positive for soil contamination, then ^{of them} some will be converted into vapor extraction wells.

I asked him then how would the soil contamination in Sums SP-2 and MW-3

be addressed. He stated that the air sparging well AP-1 would probably address the soil contamination in MW-3 and that the groundwater extraction system would probably address the soil contamination in SP-2. He also said that AP-2 will address the soil contain.

ARCO MEETING

11/19/92

2020 Husperian Blvd.

The site is active. It is uncertain whether there were leaded NSts at the site in the past. John Vargus stated that he would look into that. He added that recently the groundwater pulled from the extraction well was analyzed for a whole array of constituents that may have included lead. He will check. The Remediation Plan, covering the aquifer test, will be submitted upon the next month to the County for review.

(Note: talk to Pam regarding allaines site.)

The planned or projected start-up date for the extraction system is July '93. The revised timetables will be submitted by Dec 17, 1992.

Chuck Carmel

7/1/91

Arco 20200 Wesperian Blvd

Hayward 94541

~~Salvino~~ - Timetable is being completed

t. will be ~~sent~~ sent
w/in 2 weeks

apparently no P-test was

done in 1989 - he has checked

files.

Replace tanks (??) no
