Brian,

Based on your request, the schedule for submittal of the technical report described below for case RO189 is extended to May 31, 2013.

Jerry-

This is a follow up to my previous e-mail below and a request for a 6 week extension for the submittal of the requested technical report. As mentioned previously, the wells have been installed. Sampling of the wells was delayed due to rainy weather and we just received the final analytical results. In order to provide time to review and analyze the data, prepare the technical report, and allow for the needed report reviews and approvals, an extension of the submittal date is being requested. Upon ACEH approval, the requested technical report will be submitted by May 31, 2013.

Please let me know if you have any questions.
Thank you,

Brian Silva

Jerry-

I just wanted to touch bases with you regarding the vapor well installation and sampling at former Texaco 211253 (RO189). The 5 dual nested vapor wells were installed last week and were scheduled to be sampled Tuesday-Thursday (3/5-3/7). However, due to the rainy weather predicted for Tuesday-Wednesday (at least) of this week, we are re-scheduling the vapor sampling for next week (3/12-3/14). Dates may be adjusted depending on how many days of rain we get to allow for 72-hours between the rain event and sampling. This may necessitate an extension of the report submittal due date. I will let you know once the wells have been sampled and I have received the final analytical reports.

Please let me know if you have any questions.
Thanks,

Brian Silva
