**Duration:** 0 hours

Craig Pile of Harris & Associates is a consultant to Zone 7. They are installing a water main over about a 5-mile length. They have encountered contaminated groundwater in trench near corner of Lassen and Springtowne. They have a Baker tank and are storing water for treatment and then discharge to the sewer. I provided information on the plume of hydrocarbons that is under investigation. Chevron is the primary RP and I gave him the phone number of Ian Robb. We cannot help him with recovery of costs for dealing with contamination; that would be a private issue with Chevron. The water main will also go along Bluebell and I provided information on the Bluebell Gas site. I informed him that he is likely to encounter groundwater contamination from 909 Bluebell in the trenching particularly near the driveway furthest from Springtowne. I gave him the name and number of project manager for Geologic Technics, the environmental consultant for Mr. Aminifilibadi Masood.
