

Fund. She will send me a ltr documenting our telecon.

[by the way, Coca Cola is being sampled. I will get annual gw mon rpt near end of Dec. This is post rem mon. Will be asking for closure.]

12/16/96 Reviewed 11/20 WCC ltr.

3/13/97 Jen Anderson phoned fm AEI: Giving them a bid for soil disposal. B&B gave them bid for disposal to BNJ in Vasco.

Jen Hyman fm WCC: just submitted Fund app.

4/8/97 Reviewed 3/28/97 "Tank Closure Rpt" by B&B, prepared by Mark Varney. It reports the offsite disposal of 8 yd³ of soil to B&J Sanitary Landfill in Vacaville, under non-HW manifest. Phoned the landfill 707-451-3276 (it's in Dixon, not Vacaville, as per the telephone directory) to confirm. I spoke w/Jill Fisher. She asked for my name and fax #. Will look for manifest and weigh tag. Ok.

Which consultant did they select for SWI? Phoned Mr. Henry Suico: told Jennifer I received tank closure rpt. She got card fm Fund to say that they received their app. How much longer will it take them to approve the app?

Site Summary STID 251
Automobile Service Co.
820 Isabella St.
Oakland CA 94607

- 8/19/96 Removed one 55-gallon waste oil drum. RP thought it would be a UST. Took one soil sample at 6.5' (S1), and then dug deeper and took another soil sample at 9' (S2). Both samples were clay.
- 8/29/96 Received faxed lab results: **S1 had** 0.026 ppm benzene, 240 ppm TPHd (g,d notations), 3900 TRPH, and some 8010s: 1.100 ppm 1,2-DCB, 0.190 ppm 1,3-DCB, 0.460 ppm 1,4-DCB, and 0.033 ppm PCE.
S2 had ND benzene, some TEX, 85 ppm TPHd (g,d notations), 750 TRPH, and some 8010s: 0.290 ppm 1,2-DCB, 0.055 ppm 1,3-DCB, 0.100 ppm 1,4-DCB, and 0.028 ppm PCE.
SP had ND benzene, some TEX, 180 TPHd (g,d), 2000 TRPH. METALS were run in all 3 samples, and found to be within 10 x the STLCS.
- 9/11/96 TRANSFERRED TO LOP
- 9/12/96 WROTE NOR
- 9/20/96 **WROTE LETTER TO RP FOR SWI.** John Alt wants gw info for the area.
- 9/23/96 spoke w/Jennifer Suico: explained that I just wrote a letter on 9/20/96. Explained the full implications, in response to her many inquiries.
- 10/25/96 spoke w/John Alt: they have not disposed of the SP yet. That's why he was holding off on the closure report. Told him he can go ahead and write it anyway. DCB is a metal degreaser.
- 11/14/96 Jen Hyman from WCC phoned: 874-3058. Hopes the Cleanup Fund will accept it as an UST. She has my 9/20 ltr. RP's main concern is \$\$\$. The Tank Closure Report is already overdue. The SWI wp is due 11/20. State told her it can take 4-7 months to review a new app. She spoke w/Jim Munch. Her approach would be to either fill in pit and do a SWI w/Geoprobe, OR overex the pit and take more soil samples in the sidewalls, and do gw invest, maybe grab gw after digging to gw. She thinks the 2nd approach wd cost more initially. Has she signed a contract w/them? NO. She is just applying w/the Fund, and responding to my letter. Since they want an extension on the SWI, then we should fill in the pit, bec the winter rains are coming. ~~Wants to submit SWI within 30 days from approval by the State~~
