Subject: Quarterly Site Monitoring Report (Third Quarter, 2011)
245 8th Street
Oakland, California 94607
AEI Project No. 116907

Dear Mr. Wickham:

1.0 INTRODUCTION

AEI Consultants (AEI) has prepared this report on behalf of Mr. Victor Lum, owner and operator of Vic's Auto automotive repair and former fuel service station located at 245 8th Street in the City of Oakland, Alameda County, California (Figure 1). AEI has been retained by Mr. Lum to provide environmental engineering and consulting services related to the release of gasoline fuel hydrocarbons from the former underground storage tank (UST) and dispensing system on the property. The ongoing investigation and remediation of the release is being performed under the direction of the Alameda County Environmental Health (ACEH) local oversight program. This report has been prepared to document the field activities and results of groundwater monitoring for the third quarter, 2011 performed on August 22, 2011.

2.0 SITE DESCRIPTION AND HISTORY

The subject property (hereafter referred to as the "site" or "property") is located in a mixed commercial and residential area of Oakland. The site is a lot on the south corner of Alice Street and 8th Street, and is currently developed with a gasoline service station and automotive repair facility (Figure 2). The property covers approximately 9,375 square feet and is improved with an approximately 1,200 square foot building located centrally on the property with two bays used for automotive repair, two restrooms, and a cashier's office. The current UST hold and the dispenser island are located to the north of the building, along 8th Street. The former UST hold was located to the south of the building, along Alice Street. The remainder of the property is paved with asphalt and used for parking and staging vehicles for repairs.

- Between June 1993 and August 1994, AEI removed seven underground storage tanks (USTs) from the property. The tanks consisted of four 1,000-gallon gasoline tanks located in the sidewalk along Alice Street, two 6,000-gallon gasoline tanks and one 250-gallon waste oil tank. Impacted soil was removed from beneath the former tank area. Groundwater was encountered beneath the former 6,000-gallon tanks. Light non-aqueous phase liquid (LNAPL) was observed on the water table beneath the southern tank. The

excavated soil was transported to an appropriate disposal facility and the excavation was backfilled with clean fill material. A new tank system was installed just west of the dispenser island.

- In July 1995, two groundwater monitoring wells (MW-1 and MW-2) were installed onsite. Total petroleum hydrocarbons as gasoline (TPH-g) and benzene were detected in MW-2 at concentrations up to 210,000 µg/L and 720 µg/L, respectively during the first two monitoring episodes. Light non-aqueous phase liquid (LNAPL) or free phase gasoline was discovered in MW-1. The apparent LNAPL thickness in MW-1 ranged from 1.20 to 4.39 feet between December 1995 and March 1996.
- In August 1996, AEI advanced three soil borings (SB-1 through SB-3) onsite. TPH-g and benzene were detected in the groundwater samples from these borings at concentrations ranging from 120,000 to 140,000 µg/L, and from 12,000 to 19,000 µg/L, respectively. Methyl tertiary-butyl ether (MTBE) was also detected in all three samples at concentrations up to 27,000 µg/L. Although free phase product was not observed in the field, qualitative laboratory observations indicated an immiscible sheen was present in the samples.
- Manual bailing and pumping of LNAPL from MW-1 occurred intermittently from 1997 to 1998.
- In May 2001, two additional groundwater monitoring wells (MW-3 and MW-4) were installed onsite. In June of 2001, a free product recovery system was installed in MW-1. The free product recovery system removed several hundred gallons of LNAPL between 2001 and 2003.
- In April 2003, AEI advanced 12 additional soil borings (SB-4 to SB-15) onsite and offsite for the collection of soil, shallow groundwater, and soil vapor samples to further characterize the magnitude and lateral extent of the release.
- In January 2005, AEI installed six additional monitoring/extraction wells (MW-5, MW-6 and MW-7 were installed onsite and wells MW-10 to MW-12 were installed offsite at the 708 Alice Street property). Wells MW-8 and MW-9 were proposed for installation in the parking lane along 7th and Alice Streets; however, due to difficult insurance wording requirements imposed by the City of Oakland, these wells were not installed until March of 2008.
- From July 11 to July 27, 2005, a 16-day HVDPE pilot test was performed on wells MW-1, MW-2, MW-5, MW-6, and MW-7. Combined vapor influent flow rates ranged from approximately 170 to 190 standard cubic feet per minute (scfm) under a sustained vacuum of 16 to 17 inches of mercury (in-Hg). The average water flow rate was approximately 4.1 gallons per minute (gpm). A total of 80,740 gallons of groundwater was recovered, treated, and discharged to the sanitary sewer under a short-term, limited-volume groundwater discharge permit from the East Bay Municipal Utilities District (EBMUD). Significant drawdown and vacuum influence was observed at the vadose and saturated zone monitoring points. Approximately 5 pounds per day (lbs/day) of dissolved phase and 697 lbs/day of vapor phase hydrocarbons were recovered during the test. A total of 10,719 pounds or 1,716 gallons of gasoline was removed during this test. As a result, AEI

recommended interim corrective action using HVDPE for 12 to 18 months using fixed equipment. Please refer to AEI's "HVDPE Event Report", dated December 14, 2005, for more information.

- In March 2006, the ACEH concurred with the implementation of HVDPE using fixed equipment and requested a system design, operations and maintenance, and monitoring plan. In this letter, the ACEH also requested soil vapor sampling to evaluate the potential for vapor intrusion due to the elevated concentrations of fuel hydrocarbons detected in the soil and groundwater onsite and offsite.
- In May 2006, a HVDPE system design, operations and maintenance, and monitoring plan and a separate soil gas investigation work plan were submitted to ACEH for review and comment. Please refer to AEI's "High Vacuum Dual Phase Extraction System Design, Operations, and Maintenance Plan," dated May 24, 2006 and "Soil Gas Investigation Work Plan", dated May 12, 2006, for more information.
- In November 2006, trenching and installation of the conveyance piping for HVDPE system was conducted. The system completion and delivery was scheduled for delivery during the first quarter, 2007; however, the system was not ready until in April 2007. The remaining infrastructure, such as the rotary phase converter, equipment, fence, and wellhead connections were installed in May of 2007 and the system was started up on June 26, 2007.
- On June 11, 2007, two 55-gallon drums, or approximately 100 gallons of water containing about 50% LNAPL, was removed from MW-1 and MW-6 by operating the HVDPE system in product skimming mode.
- In November 2007, additional HVDPE conveyance piping was installed above grade behind the onsite building to the rear of the property and the system was expanded to include monitoring/extraction wells MW-10, MW-11, and MW-12.
- In March 2008, wells (MW-8, MW-9 and MW-13) were installed. Elevated concentrations of TPH-g, BTEX, and MTBE were detected in samples collected from MW-9. Low to none-detectable concentrations of TPH-g, BTEX, and MTBE were detected in MW-8 and MW-13. Elevated concentrations of MTBE were detected in MW-13.
- Between August 21 and 22, 2008, soil gas probes GP-3 and GP-4 were decommissioned by physical removal and three horizontal HVDPE conveyance piping laterals were installed to MW-10 through MW-12 so that these wells could continue to be used for dual phase extraction while the 708 Alice Street property was being developed.
- In July 2009, monitoring wells (MW-14, MW-15, and MW-16) were installed. MW-14 was installed in the parking lane along Alice Street approximately 80 feet southwest of MW-8. MW-15 and MW-16 were installed in the parking lane on the southwest side of 7th Street approximately 60 feet apart. The monitoring wells were developed by surging and over-pumping on August 3, 2009. Elevated concentrations of TPH-g and BTEX were detected in samples collected from MW-14. MTBE was not detected in MW-14 at or above the laboratory reporting limit of 1.0 µg/L. Lower concentrations of TPH-g, BTEX, and MTBE

were detected in MW-15 and MW-16. Refer to AEI's "Monitoring Well Installation & Quarterly Site Monitoring Report (Third Quarter, 2009)", dated October 13, 2009, for more detailed information.

- On December 2, 2009, the property owner and AEI held a meeting with the ACEH to discuss the HVDPE remediation system status, results of the first rebound evaluation, and recommendations regarding future activities for the site.
- On March 17, 2010, AEI performed a source zone investigation by advancing four continuously cored soil borings (SB-16 to SB-19) to 30-foot bgs. Soil samples were collected from select depths and one discrete groundwater sample (SB-18W) was collected from boring SB-18 at 28 to 30 feet bgs. Based on the results of the analyses, a significant residual hydrocarbon source was identified below the water table. Relatively low concentrations of TPH-g and benzene were detected in discrete grab groundwater sample SB-18W. Further detail relating to the additional soil source investigation can be found in AEI's "Source Zone Delineation Report & Air Sparging Pilot Test Workplan", dated May 10, 2010.
- Between June 30 and July 1, 2010, AEI installed four air sparging wells (AS-1 to AS-4) to target the source of adsorbed-phase hydrocarbons identified below the water table during the March, 2010 source zone investigation.
- On November 8, 9 and 10, 2010, AEI conducted an air sparging pilot test. Refer to AEI's "Air Sparging Pilot Test Report", dated February 28, 2011, for more information.

3.0 GEOLOGY AND HYDROLOGY

The elevation of the site is approximately 27 to 29 feet above mean sea level (amsl). The site is flat; however, the topography of the area slopes gently to the southwest. The site is located between Lake Merritt and the Oakland Inner Harbor channel, approximately one-half mile from each. The near surface sediments are mapped as Holocene and Pleistocene Merritt Sand (Qms), which are further described as "fine-grained, well-sorted, well-drained, Aeolian sand deposits" (Helley and Graymer, 1997 and Graymer, 2000). Depth to the Franciscan Formation basement underlying the unconsolidated deposits is approximately 400 feet (Norfleet Consultants, 1998).

Based on the logs of soil borings advanced on and offsite, the native soils generally consist of fine to medium grained sands with silt and clay present to at least 28 feet bgs, the deepest explored at the site. Typically, silty and clayey fine grained sand have been encountered to depths of 15 to 18 feet bgs. This is underlain by poorly graded, clean to slightly clayey and silty fine to medium sand. Both sand bodies represent a single hydro-geologic system. Sediments have been relatively uniform throughout the investigation area.

Groundwater depths have typically ranged from 14 to 19 feet bgs, corresponding to elevation of approximately 14 to 16 feet above mean sea level (msl). Annual groundwater levels fluctuate by approximately 3 to 4 feet. Groundwater has consistently flowed to the south, southeast, or southwest with a hydraulic gradient of approximately 0.010 ft/ft. Recent water levels have been affected by the groundwater extraction activities.

4.0 SUMMARY OF MONITORING ACTIVITIES

4.1 Gauging and Sampling

On August 22, 2011, the water levels in all of the monitoring wells were gauged, except MW-10 through MW-12. Although MW-10 through MW-12 can still be used for dual-phase extraction, gauging and sampling is no longer possible because these wells were buried beneath a new residential building in August 2008. Groundwater samples were collected from all the monitoring/dual-phase extraction wells, except MW-3, MW-4, MW-8, and MW-10 through MW-12, in accordance with the existing monitoring schedule approved by ACEH in December 2009. The well locations are shown on Figure 2.

Prior to sampling, the well caps and/or drop tubes were removed and the water levels were measured from the top of the well casings with an electronic water level indicator. Wells with historic free product (MW-1, MW-6, and MW-7) were checked with an oil-water interface meter. Low-flow samples were collected using a peristaltic pump by lowering a ¼-inch polyethylene drop tube to a depth ranging from 19 to 21-feet bgs. New, clean disposable tubing was used at each well. The pump was operated at a flow rate of approximately 250 milliliters per minute. Once the field parameters stabilized, groundwater samples were collected directly from the discharge side of peristaltic pump. The following parameters were measured during purging: temperature, pH, specific conductivity, dissolved oxygen (DO), and oxygen reduction potential (ORP). A visual estimate and description of turbidity was noted for each well.

The groundwater samples were collected into 40-millileter (mL) volatile organic analysis (VOA) vials and capped so that no head space or air bubbles were present within the sample containers. Samples were entered onto a chain of custody record and placed in a pre-chilled cooler on wet ice pending transportation to the laboratory. The samples were delivered on the day of collection under proper chain of custody protocol to McCampbell Analytical, Inc. of Pittsburg, California (DHS Certification #1644) for analysis. Ten groundwater samples were analyzed for TPH-g by EPA Method 8015C and BTEX and MTBE by EPA Method 8021B.

4.2 Soil Gas Monitoring for Vapor Intrusion Evaluation

Per concurrence from the ACEH in a letter dated October 3, 2008, quarterly soil gas sampling has been temporarily suspended during operation of the HVDPE system.

4.3 HVDPE System Operation, Maintenance and Monitoring

The HVDPE system was shutdown on December 23, 2009 due to declining influent concentrations and asymptotic hydrocarbon recovery. The remediation system remained off throughout the first quarter and most of the second and third quarters, 2010 for a rebound evaluation. The remediation system was restarted during the fourth quarter, 2010 in preparation for the air sparging pilot test. The air sparging pilot test was completed in November, 2010 and the air sparging system has been running in conjunction with HVDPE until June 20, 2011 when HVDPE system was shutdown due to declining influent concentrations.

- HVDPE system did not operate during the third quarter 2011.

The individual extraction well and the combined system influent vapor analytical and field screening data is summarized in Table 5. The mass removal rates are summarized in Table 6 and plotted on Figure 6. The quarterly mass removal data is summarized in Table 7. A summary of the air sparging system data is presented in Table 8.

5.0 RESULTS & CONCLUSIONS

5.1 Groundwater Elevations and Hydraulic Gradient

The results of the apparent LNAPL thickness measurements, groundwater elevations, and hydraulic gradient for this monitoring episode are summarized below:

- LNAPL was not observed in any of the monitoring wells, although detectable concentrations of dissolved-phase hydrocarbons remain onsite and offsite.
- The current groundwater flow direction was calculated towards the south-southwest with a hydraulic gradient of approximately 0.008 ft/ft. The groundwater flow direction and hydraulic gradient during this quarter was consistent with previous monitoring events.

The groundwater elevation data is summarized in Table 1 and groundwater elevation contours are shown on Figure 4. A summary of the average groundwater elevations and flow directions is presented in Table 2.

5.2 Groundwater Analytical Data

The analytical results for the groundwater samples collected during this monitoring event using low-flow purging and sampling are summarized below.

- As compared with the previous quarter, slightly elevated in the concentrations of dissolved-phase hydrocarbons were observed in most monitoring wells, except MW-6 and MW-9 where significant reductions were observed.
- The highest concentration of TPH-g was detected in MW-6 at a concentration of 4,100 µg/L. The next highest concentrations of TPH-g were detected in MW-5, MW-2 and MW-7 at 2,700 µg/L, 1,500 µg/L, and 1,500 µg/L respectively.
- The highest concentration of benzene was detected in MW-5 at a concentration of 120 µg/L. The next highest concentrations of benzene were detected in MW-2 and MW-7 at 69 µg/L and 47 µg/L, respectively.
- Excluding wells with elevated reporting limits (MW-1, MW-2, MW-5, MW-6 and MW-7), the MTBE was not detected above the lab reporting limit of 5.0 µg/L in all the wells monitored.

The groundwater analytical data is summarized in Table 3 and the current data is shown on Figure 5. Refer to Appendix A for the monitoring well field sampling forms. The laboratory analytical reports with chain of custody and quality assurance/quality control documentation are included in Appendix B.

6.0 SUMMARY & PLANNED ACTIVITIES

AEI completed the third quarter, 2011 groundwater monitoring and sampling activities in accordance with the approved monitoring schedule. This report presented the finding of these monitoring activities and an update on the HVDPE system status and hydrocarbon mass removal. Based on the review of the data, AEI has the following observations:

- Since the third quarter, 2010, the concentrations of TPH-g and BTEX in down gradient monitoring well MW-9 have decreased by 100% in recent monitoring event. Since this area has not been treated directly, this is attributed to source removal and natural attenuation.
- LNAPL has not been detected in any of the monitoring wells since the HVDPE system was installed and started up in June 2007. However, elevated concentrations of dissolved-phase hydrocarbons remain onsite and offsite.
- During this quarter, low-flow purging and sampling techniques were used on all monitoring wells. The highest concentrations of TPH-g and BTEX were detected in MW-1, MW-2, MW-5, MW-6, and MW-7.
- The significant reductions in the concentrations of dissolved-phase hydrocarbons observed in the source zone monitoring wells were likely the result of air sparging in conjunction with HVDPE.

The following activities are planned for the fourth quarter 2011:

- Fourth quarter, 2011 groundwater monitoring and sampling activities are planned for early December, 2011 in accordance with the approved monitoring schedule using the low-flow sampling methodology.
- HVDPE system will remain shutdown until after the 4th quarter groundwater monitoring event. If no significant rebound is observed, AEI expects to begin preparation for a case closure request. If concentrations increase, the ACEH will be contacted to access whether additional action is required.

8.0 REPORT LIMITATIONS AND SIGNATURES

This report presents a summary of work completed by AEI, including observations and descriptions of site conditions. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide requested information, but it cannot be assumed that they are entirely representative of all areas not sampled. All conclusions and recommendations are based on these analyses and observations. Conclusions beyond those stated and reported herein should not be inferred from this document.

These services were performed in accordance with generally accepted practices in the environmental engineering and construction field that existed at the time and location of the work and were performed under the direction of appropriate California-licensed professionals. Should you have any questions regarding this report, we can be reached at (925) 746-6000.

Sincerely,
AEI Consultants

NOTES:

- not applicable

nm = not measured

ft = feet

LNAPL = light non-aqueous phase liquid

ft amsl = feet above mean sea level

*Well head modified to serve as remediation well, top of casing elevation no longer considered surveyed

1) Monitoring well top of casing (TOC) elevations were resurveyed by Morrow Surveying on January 10, 2006 and February 7, 2006

2) Groundwater elevations for the February 3, 2005 and subsequent monitoring episodes use the new well survey data

3) Depth water is measured from the top of the well casing

4) When LNAPL is present at >0.10 ft, the groundwater elevations are assumed to be affected by the LNAPL

5) Monitoring well top of casing (TOC) elevations for MW-8, 9, 13, 14, 15 & 16 were surveyed by Morrow Surveying on September 30, 2009

TABLE 2: GROUNDWATER FLOW SUMMARY

Vic's Auto, 245 8th Street, Oakland, California

Episode #	Date	Average Groundwater Elevation ¹ (feet amsl)	Change from Previous Episode (feet)	Flow direction (gradient)
-----------	------	---	---	------------------------------

NOTES:

- not applicable

ft amsl = feet above mean sea level

1) MW-2 to MW-4 only used for episodes 1 through 14; all wells used for episodes 15 and later

* Flow direction not calculated due to onsite operation of dual-phase extraction remediation system

a) HVDPE System was shutdown for approximately three (3) months prior to sampling; therefore, groundwater elevation data was contoured. The groundwater elevation data and contours are shown on Figure 4.

b) HVDPE System was shutdown for approximately four (4) months prior to sampling; therefore, groundwater elevation data was contoured. The groundwater elevation data and contours are shown on Figure 4.

c) HVDPE System was shutdown for approximately seven (7) months prior to sampling; therefore, groundwater elevation data was contoured. In addition, average elevation and change from previous was not calculated for remediation wells MW-1, 2, 5, 6, and 7, since these well heads have been modified since their survey. The groundwater elevation data and contours are shown on Figure 4.

d) HVDPE System was shutdown for approximately three (3) months prior to sampling; therefore, groundwater elevation data was contoured. In addition, average elevation and change from previous was not calculated for remediation wells MW-1, 2, 5, 6, and 7, since these well heads have been modified since their survey. The groundwater elevation data and contours are shown on Figure 4.

TABLE 3: GROUNDWATER ANALYTICAL DATA SUMMARY

Vic's Auto, 245 8th Street, Oakland, California

Well ID (screen interval)	Date Collected	Apparent LNAPL Thickness (ft)	TPH-g (µg/L)	MTBE (µg/L)	Benzene (µg/L)	Toluene (µg/L)	Ethyl- benzene (µg/L)	Xylenes (µg/L)	HVOC (µg/L)
---------------------------------	-------------------	--	-----------------	----------------	-------------------	-------------------	-----------------------------	-------------------	----------------

NOTES:

- not sampled/analyzed

ft = feet

ns/fp = not sampled / free product present

µg/L = micrograms per liter or parts per billion (ppb)

TPH-g by EPA Method SW8015Cm

BTEX & MTBE by EPA Method SW8021B

TPH-g = total petroleum hydrocarbons as gasoline

MTBE = methyl tertiary-butyl ether

HVOC= halogenated volatile organic compounds (e.g., PCE, TCE, DCE, VC)

DL = detection limit

* = MTBE by EPA Method 8260

^ = Duplicate sample analyzed from different VOA

1) Analytical results for MW-2 and MW-3 reversed from lab data based on historical concentration trends observed

2) Groundwater sample re-analyzed for MTBE-only by EPA Method SW8260B

3) Wellheads removed and wells now located ~4' below grade beneath new residential construction; routine sampling is no longer possible

TABLE 4: SOIL GAS ANALYTICAL DATA SUMMARY

Vic's Auto, 245 8th Street, Oakland, California

Well ID	Date Collected	Sample Depth (ft bgs)	TPH-g (µg/m3)	MTBE (µg/m3)	Benzene (µg/m3)	Toluene (µg/m3)	Ethyl-benzene (µg/m3)	Xylenes (µg/m3)	Ethanol (µg/m3)	PCE (µg/m3)	2-propanol (µg/m3)
---------	----------------	-----------------------	---------------	--------------	-----------------	-----------------	-----------------------	-----------------	-----------------	-------------	--------------------

NOTES:

- not sampled/analyzed

2-propanol (i.e., isopropyl alcohol) tracer/leak check compound

ft bgs = feet below ground surface

µg/m3 = micrograms per cubic meter

TPH-g = total petroleum hydrocarbons as gasoline

MTBE = methyl tertiary-butyl ether

PCE = tetrachloroethene

ESLs = Environmental Screening Levels - for residential land use

CHHSLs = California Human Health Screening Levels

pp = CHHSL postponed

* = Sampling not possible due to seasonal wet soil conditions

^ = No sample analysis due to presence of free moisture in sample tubing

D_f = after the probe/sample ID indicates a duplicate sample collected in the fieldD_l = after the probe/sample ID indicates a duplicate sample prepared and analyzed by the lab

TPH-g by modified EPA Method TO-3

BTEX, MTBE, Ethanol, PCE, 2-propanol by modified EPA Method TO-15

1) On August 21, 2008, GP-3 and GP-4 were decommissioned during the installation of the HVDPE conveyance piping laterals

2) Per concurrence from ACHCSA in a letter dated October 3, 2008, quarterly soil gas sampling has been temporarily suspended during operation of the HVDPE system

TABLE 5: HVDPE VAPOR ANALYTICAL & FIELD SCREENING DATA SUMMARY

Vic's Auto, 245 8th Street, Oakland, California

Sample Port ID	Sample Date	Notes	Initial Valve Position	Final Valve Position	Manifold Vacuum (in-Hg)	Field Screening Data				Vapor Analytical Data					
						TVH (ppmv)	CH ₄ (%)	O ₂ (%)	CO ₂ (%)	TPH-g (ppmv)	MTBE (ppmv)	Benzene (ppmv)	Toluene (ppmv)	Ethylbenzene (ppmv)	Xylenes (ppmv)

NOTES:

TPH-g = total petroleum hydrocarbons as gasoline

MTBE = methyl tertiary-butyl ether

in-Hg = inches of mercury

ppmv = parts per million by volume

% = percent concentration by volume

PRED = pre-dilution sample port at combined inlet

POSTD = post-dilution sample part at thermal/catalytic oxidizer inlet

- not sampled/analyzed

TPH-g by EPA Method 8015C

BTEX & MTBE by EPA Method 8021B

xx = methane sensor damaged; pending replacement

TVH = total volatile hydrocarbons (calibrated w/ hexane)

CH₄ = methane by infrared detection (0 to 100% by volume)

O₂ = oxygen by electrochemical detection (0-40% by volume)

CO₂ = carbon dioxide by infrared detection (0 to 20% by volume)

TVH, CH₄, O₂, and CO₂ measured w/ RKI Eagle gas detector

- 1) Individual well water separator trap used for the 1st time.
- 2) Vacuum leak detected at wellhead due to broken wellhead seal; well turned off.
- 3) Pump failed, not strong enough to collect sample from PRED @ 18 in-Hg.
- 4) Opened 100% for field screening, turned OFF after screening, no lab sample collected.
- 5) Opened 100% for field screening, no lab sample collected.
- 6) Discontinued POSTD process sampling port starting in the 3rd Quarter, 2008 because it no longer provides any additional useful information.
- 7) HVDPE system shutdown most of the month of August for quarterly soil gas monitoring and pending repair of the rotary phase converter.
- 8) Field screened and sampled with MW-1S, MW-6S, and MW-12S OFF.
- 9) Field screened and sampled with MW-1S, MW-6S, and MW-12S ON; note the significant loss of applied vacuum and decrease in the concentration of hydrocarbons.
- 10) Field screened and sampled with MW-1S, MW-6S, and MW-12S OFF.
- 11) Field screened and sampled with MW-1S, MW-6S, and MW-12S ON; note the slight loss of applied vacuum (~1 in-Hg) and decrease in the concentration of hydrocarbons.
- 12) Field screened and sampled with MW-1S, MW-6S, and MW-12S ON.
- 13) Field screened and sampled with MW-1S, MW-6S, and MW-12S OFF; note the significant increase in the concentration of hydrocarbons.
- 14) The 1-Liter Tedlar® bag was damaged during transportation to the laboratory on 12/11/09; therefore, the samples was recollected on 12/16/09.
- 15) Influent vapor sample collected after sparging into AS-1 for 2 to 3-hours.
- 16) Sample collected approximately 1-hour after shutting down AS-1 and AS-3 and turning on AS-2 and AS-4.
- 17) Anomalous field reading and analytical data possibly due to cross contamination. All subsequent sampling events have been in compliance.

TABLE 6: HVDPE PERFORMANCE & MASS REMOVAL DATA SUMMARY

Vic's Auto, 245 8th Street, Oakland, California

Sample Date	Notes	Possible Runtime (days)	Possible Runtime (hrs)	Hour Meter Reading	Actual Runtime (days)	Actual Runtime (hrs)	System Runtime (%)	Inlet Temp (°F)	Inlet Vac (in-Hg)	Well Velocity (fpm)	Well Flow (scfm)	Influent TPH-g (ppmv)	Mass Removal Rate (lbs/day)	Total Mass Removed (pounds)	Total Mass Removed (gallons)
-------------	-------	-------------------------	------------------------	--------------------	-----------------------	----------------------	--------------------	-----------------	-------------------	---------------------	------------------	-----------------------	-----------------------------	-----------------------------	------------------------------

NOTES:

ppmv = parts per million by volume

TPH-g = total petroleum hydrocarbons as gasoline

TPH-g by EPA Method 8015C

in-Hg = inches of mercury (gauge pressure)

hrs = hours

- not analyzed/applicable

fpm = feet per minute

scfm = standard cubic feet per minute

Flow = Velocity x Cross Sectional Area of the Pipe

Cross Sectional Area of 3" Pipe = 0.0491 ft²

Well Flow = Well Velocity * 0.0491

PRED = TPH-g influent concentration

1) System installed and started up on June 26, 2007

2) Propane delivery missed; system shutdown on 08/06/07

3) Propane delivery missed; system shutdown on 08/21/07

4) System down between 09/11 and 09/24/08 due to electrical problems

5) System expanded; MW-10, MW-11 and MW-12 extraction added online

6) Propane delivery missed; system shutdown on 01/02/08

7) Propane delivery missed; system shutdown on 01/22/08

8) System shutdown most of February to evaluate free product recovery

9) Catalyst module installed and started up in March of 2008

10) Combined influent samples collected after sparging into AS-1 for 2 to 3-hours

MASS REMOVAL RATE (MRR) ESTIMATE ASSUMPTIONS:

MRR Estimate = (20,000*10⁻⁶)*(50scfm)*(1440min/day)*(28.32L/ft³)*(1mol/22.4L)*(100g/mol)*(1lb/454g)

MRR Estimate assumes negligible change in air density, constant concentration and average molecular weight

1 mole occupies 22.4 Liters at STP

STP is 21°C and 1 atm

MWgas = 100 grams/mole (weathered gasoline)

1 day = 1440 minutes

1ft³ = 28.38 liters

1 lb = 454 grams

1 gallon gas ~ 6 pounds

TABLE 7: QUARTERLY MASS REMOVAL DATA SUMMARY

Vic's Auto, 245 8th Street, Oakland, California

2007 Average Mass Removal Rates

Period	Mass Removal Rate (lbs/day)	Mass Removal Rate (gpd)	Cumulative Mass Removed (pounds)	Cumulative Mass Removed (gallons)
Q3, 2007	241	40	8,446	1,802
Q4, 2007	114	19	8,611	1,435

2008 Average Mass Removal Rates

Period	Mass Removal Rate (lbs/day)	Mass Removal Rate (gpd)	Cumulative Mass Removed (pounds)	Cumulative Mass Removed (gallons)
Q1, 2008	43	7.2	2,658	443
Q2, 2008	50	8.3	3,896	649
Q3, 2008	56	9.4	2,888	481
Q4, 2008	58	9.6	2,410	320

2009 Average Mass Removal Rates

Period	Mass Removal Rate (lbs/day)	Mass Removal Rate (gpd)	Cumulative Mass Removed (pounds)	Cumulative Mass Removed (gallons)
Q1, 2009	20	3.3	715	119
Q2, 2009	3	0.5	49	8
Q3, 2009	62	10.3	2,012	335
Q4, 2009	76	12.7	3,399	567

NOTES:

psig = pounds per square inch

°F = degrees Fahrenheit

acfh = actual cubic feet per hour

acfm = actual cubic feet per minute

scfm = standard cubic feet per minute

1) Recording of HVDPE system and thermal oxidizer hour meter from 11/08/10 to 01/12/11

2) Flow Rate (acfm) = Flow Rate (acfh) / 60 (min/hour)

3) Flow Rate (scfm) = Flow Rate (acfm) * $\sqrt{((14.7 + \text{Manifold Pressure}) * 530) / (14.7 * (530 + \text{Manifold Temp}))}$

a) AS-3 left on after testing on 11/08/10; air sparging system interlocked w/ HVDPE system.

b) Turned off AS-3; turned on AS-4

c) Turned off AS-4; turned on AS-1 and AS-3

d) Repaired hour meter for refurbished AS system

e) Increased flow rate from 2 acfm per well to 5 -6 acfm per well

f) Turned off AS-1 and AS-3; turned on AS-2 and AS-4.

g) Turned off AS-2 and AS-4; turned on AS-1 and AS-3.

h) Turned off AS-1 and AS-3; turned on AS-2 and AS-4.

i) Turned off AS-2 and AS-4; turned on AS-1 and AS-3.

j) Turned off AS-1 and AS-3; turned on AS-2 and AS-4.

TABLE 9: SOIL GAS FIELD SCREENING DATA SUMMARY

Vic's Auto, 245 8th Street, Oakland, California

Soil Gas Probe ID	Date	Notes	Vacuum Influence (in-H ₂ O)	Purge Vacuum (in-H ₂ O)	RKI Eagle Multi-Gas Detector				ppbRAE 3000 PID		
					TVH (ppmv)	CH ₄ (%)	O ₂ (%)	CO ₂ (%)	Equipment Blank (ppmv)	Background PID (ppmv)	PID Reading (ppmv)

NOTES:

- not sampled / analyzed

in-H₂O = inches of water

ppmv = parts per million by volume

% = percent concentration by volume

xx = methane sensor damaged; pending replacement

nm = not measured

TVH = total volatile hydrocarbons (calibrated w/ hexane)

CH₄ = methane

O₂ = oxygen

CO₂ = carbon dioxide

TVH, CH₄, O₂, and CO₂ measured w/ RKI Eagle gas detector

* Soil gas sample collection not possible due to wet or saturated soil conditions

+ High purge vacuum suggests wet or saturated soil conditions

^ Vacuum influence only check, soil gas probes not screened

1) TPH-g by modified EPA Method TO-3 GC/FID and CH₄, O₂, and CO₂ by modified method ASTM D-1946 GC/FID or GC/TCD

2) Soil gas probe screened for TVH, CH₄, O₂, and CO₂ approximately one week prior to sampling for vapor intrusion evaluation

3) HVDPE system was shutdown on January 6, 2009, approximately one (1) month before screening GP-1 & GP-2

4) Nested soil gas probes GP-3 and GP-4 were abandoned on August 21, 2008 during the HVDPE conveyance lateral installation

5) Soil gas probes screened before restarting the HVDPE system which had been shutdown for 118 days or approximately four (4) months

Summary of Work Requested	<p style="text-align: center;">Groundwater Monitoring Event (Q3, 2011)</p> <p>1) Sample MW-1, 2, 5, 6, 7, 9, and 13 to 16 using low-flow purging and sampling method.</p> <p>2) Measure and record the depth to water before and after purging and sampling.</p> <p>3) Run the peristaltic pump at 150 rpms x 1.67 ml/rev = 250 ml/min.</p> <p>4) Stabilization criteria: pH ±0.1; conductivity ±3%; DO ±10%; ORP ±10 mV.</p> <p>5) Collect at least three (3) 40-mL VOAs from each well.</p> <p>6) Make sure VOAs from MW-1, 2, 5, 6, and 7 do not contain any suspended solids.</p>
---------------------------	---

Completed Not Completed

- 1. Removed standing water from well boxes; removed well caps; allowed water levels to stabilize.
- 2. Checked the depth to water in each well sampled before and after purging and sampling.
- 3. Continuously purged up to 10 liters of groundwater using peristaltic pump and flow-thru cell.
- 4. Recorded temp, pH, sc, DO, and ORP readings until stabilization criteria was achieved (see above).
- 5. Noted appearance of purge water (clear, dark, milky, etc.) and if an immiscible sheen was present.
- 6. Collected three (3) 40-ml VOA vials per well, capped with zero head space (no bubbles in the VOAs).
- 7. Noted condition of well boxes, well casing, and well plug; recorded wellhead info on the field sheets.
- 8. Recorded the amount of consumables (bailers, drums, well plugs, tubing, etc.) used.
- 9. Labeled purge water drums; recorded the total number of drums used and left onsite below.
- 10. Transported samples on water ice to McCampbell Analytical, Inc. of Pittsburg, CA for analyses.

Lab Analyses:	None	<u>TPH-g</u>	TPH-d	<u>MBTEX</u>	Fuel Oxygenates Other
Turnaround Time:	Rush	24 hours	48 hours	72 hours	<u>Standard</u>

Project Name: Vic's Automotive (Q3, 2011)

Field Person: J. Sigg

Location: 245 8th Street, Oakland, California

Project Manager: S. Lao

Project No.: 116907 Date: 08/22/11

Weather: _____

Daily Summary: **Groundwater Monitoring Event (Q3, 2011)**

- 1) Sample MW-1, 2, 5, 6, 7, 9, and 13 to 16 using low-flow purging and sampling method.
- 2) Measure and record the depth to water before and after purging and sampling.
- 3) Run the peristaltic pump at 150 rpms x 1.67 ml/rev = 250 ml/min.
- 4) Stabilization criteria: pH ± 0.1 ; conductivity $\pm 3\%$; DO $\pm 10\%$; ORP ± 10 mV.
- 5) Collect at least three (3) 40-mL VOAs from each well.

Materials: Silicon tubing (L/S 15), polyethylene tubing (1/4" OD), 55-gallon drum, 40-ml VOA vials, nitrile gloves.

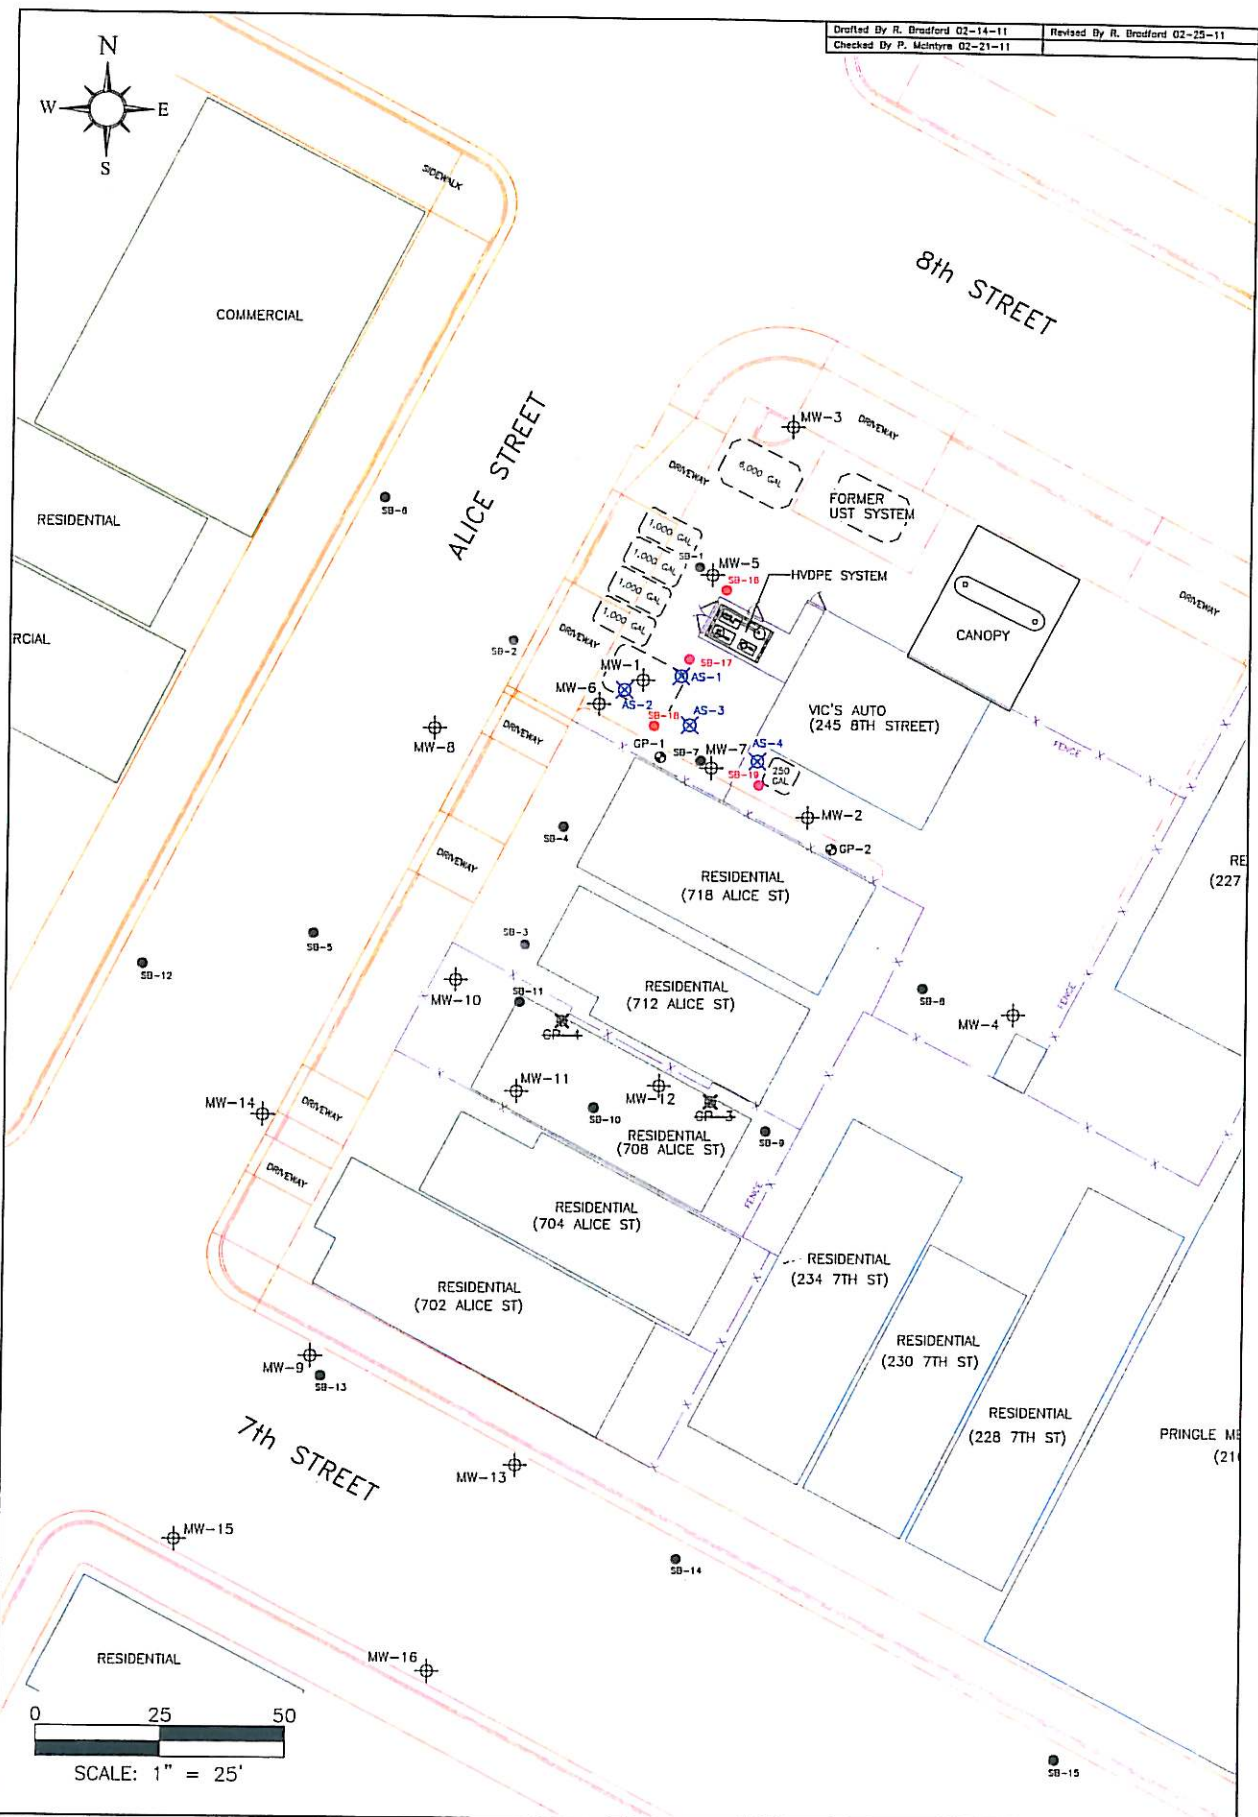

Equipment: Peristaltic pump, water level meter, oil-water interface meter, orange traffic cones, hand tools.

8-19-11 Set up No Parking Signs on 7th Street

TIME	SUMMARIZE FIELD ACTIVITIES
0530	leave home
0540	arrive @ site
	open all wells
	measure DTH in all wells
0600	Begin GWM event
1310	Finish GWM event
	Transfer water from Drum on truck to Drum on ground
	Clean area -
	get Vicks Signature / talk w/Vic
1430	leave site
	Drop Samples on 8/23/11

Field Person Signature: _____ 

Project Manager Signature: _____

GROUNDWATER MONITORING WELL FIELD SAMPLING FORM

Monitoring Well Number: MW-13

Project Name:	Vic's Automotive (Q3, 2011) Low-Flow	Date of Sampling:	8/22/2011
Job Number:	116907	Name of Sampler:	J. Sigg
Project Address:	245 8th Street, Oakland		

MONITORING WELL DATA

Well Casing Diameter (2"/4"/6")	2
Wellhead Condition	▼
Elevation of Top of Casing (feet above msl)	28.84
Depth of Well	22.00
Depth to Water (from top of casing)	Before: 14.31 After: 14.33
Depth to Free Product (from top of casing)	Before: After:
Water Elevation (feet above msl)	Before: 28.84 After: 28.84
Purging and Sampling Method	Low-Flow (Minimal Drawdown) Purging / Sampling
Drop Tube Depth (feet bgs)	19.0
Pump Speed (Default = 300 rpms)	150
Estimated Purge Rate (Pump Speed * 1.67 ml/rev)	250
Actual Volume Purged (liters)	5
Appearance of Purge Water	Clear
Free Product Present?	Thickness (ft):

GROUNDWATER SAMPLES

Number of Samples/Container Size				Three (3) 40ml VOA vials			
Time	Volume Removed (liters)	Temperature (deg C)	Conductivity (uS/cm)	DO (mg/l)	pH	ORP (meV)	Comments
1000	1	21.83	331	2.84	7.01	140.8	Clear
	2	21.86	333	2.79	6.98	-142.3	
	3	21.87	338	2.70	6.97	-146.7	
	4	21.86	336	2.66	6.97	-148.3	
1010	5	21.86	336	2.60	6.97	-151.4	

COMMENTS (i.e., sample odor, well recharge time & percent, etc.)

Use low-flow (minimal drawdown) purging and sampling method
Position 1/4" polyethylene drop tube at 19-feet bgs
Stabilization criteria: pH +/- 0.1; conductivity +/- 3%; DO +/- 10%; ORP +/- 10 meV

LABORATORY ANALYTICAL REPORTS W/ CHAIN OF CUSTODY DOCUMENTATION

Analytical Report

AEI Consultants 2500 Camino Diablo, Ste. #200 Walnut Creek, CA 94597	Client Project ID: #116907; Vic's Auto (Q3, 2011)	Date Sampled: 08/22/11
		Date Received: 08/23/11
	Client Contact: Stephen Lao	Date Reported: 08/29/11
	Client P.O.: #WC083235	Date Completed: 08/29/11

WorkOrder: 1108671

August 29, 2011

Dear Stephen:

Enclosed within are:

- 1) The results of the **10** analyzed samples from your project: **#116907; Vic's Auto (Q3, 2011)**,
- 2) A QC report for the above samples,
- 3) A copy of the chain of custody, and
- 4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McC Campbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius
Laboratory Manager
McC Campbell Analytical, Inc.

The analytical results relate only to the items tested.

Comments:

NOTE: Soil samples are discarded 60 days after results are reported unless other arrangements are made (Water samples are 30 days).
 Hazardous samples will be returned to client or disposed of at client expense.

Sample Receipt Checklist

Client Name: **AEI Consultants**

Date and Time Received: **8/23/2011 8:52:34 AM**

Project Name: **#116907; Vic's Auto (Q3, 2011)**

Checklist completed and reviewed by: **Maria Venegas**

WorkOrder N°: **1108671** Matrix: Water

Carrier: Client Drop-In

Chain of Custody (COC) Information

- Chain of custody present? Yes No
- Chain of custody signed when relinquished and received? Yes No
- Chain of custody agrees with sample labels? Yes No
- Sample IDs noted by Client on COC? Yes No
- Date and Time of collection noted by Client on COC? Yes No
- Sampler's name noted on COC? Yes No

Sample Receipt Information

- Custody seals intact on shipping container/cooler? Yes No NA
- Shipping container/cooler in good condition? Yes No
- Samples in proper containers/bottles? Yes No
- Sample containers intact? Yes No
- Sufficient sample volume for indicated test? Yes No

Sample Preservation and Hold Time (HT) Information

- All samples received within holding time? Yes No
- Container/Temp Blank temperature Cooler Temp: 5.8°C NA
- Water - VOA vials have zero headspace / no bubbles? Yes No No VOA vials submitted
- Sample labels checked for correct preservation? Yes No
- Metal - pH acceptable upon receipt (pH<2)? Yes No NA
- Samples Received on Ice? Yes No

(Ice Type: WET ICE)

* NOTE: If the "No" box is checked, see comments below.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.
 % Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).
 MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.
 £ TPH(btex) = sum of BTEX areas from the FID.
 # cluttered chromatogram; sample peak coelutes with surrogate peak.
 N/A = not enough sample to perform matrix spike and matrix spike duplicate.
 NR = matrix interference and/or analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content, or inconsistency in sample containers.

QC SUMMARY REPORT FOR SW8021B/8015Bm

W.O. Sample Matrix: Water

QC Matrix: Water

BatchID: 60568

WorkOrder: 1108671

EPA Method: SW8021B/8015Bm		Extraction: SW5030B							Spiked Sample ID: 1108647-007A
