**Duration:** 0 hours

Phone call with Daniel Villanueva of Advanced GeoEnvironmental. They object to my most recent directive letter. They want to do an ISCO pilot test to determine whether ISCO will work before preparing a CAP. I indicated that I wanted them to consider what would be necessary to cleanup and close all of the site rather than focusing on pilot study in two existing wells. Daniel Villanueva continued to press for ISCO pilot test in two wells. He questioned why other issues such as potential for vapor intrusion to adjacent property would need to be considered in FS. I indicated that we would like some assurance that ISCO would be effective as a remedy that could lead to closure of site. We discussed an expanded scope of FS that would look at whether ISCO could be cost effective for entire site.
