**Subject:** Clarification Reduction Monitoring/Sampling - Various ARC sites

**Importance:** High

Paresh,

This email serves to clarify recent correspondence from Alameda County Environmental Health (ACEH) regarding reductions in ground-water monitoring and sampling prompted by the State Water Resources Control Board (SWRCB) Resolution 2009-0042. The June 26, 2009 Atlantic Richfield Company (ARC) letter recommended reduced monitoring and sampling schedules for the sites listed below. The July 9, 2009 ACEH letter approved these recommendations and requested that reports be submitted either five days or 30 days following close of the reporting period depending on whether the site was sampled during the first or second half of the reporting period.

In the latter part of July second letters were received from the ACEH regarding reduction in ground-water monitoring and sampling in response to SWRCB Resolution 2009-0042. Certain components of these second letters differed from what had already been approved by the ACEH in their July 9, 2009 letter. An example includes the deadline for submittal of reports – the second letter specified reports should be submitted no later than 60 days following the sampling event.

Based on our recent conversations, we understand the ACEH's intent was for the requirements in the original July 9, 2009 letter would be the requirements to be followed moving forward. If the ACEH's understanding is otherwise, we request that further written clarification be provided. If a response from the ACEH is not received regarding this clarification email, we will proceed to work off requirements included in the July 9, 2009 ACEH letter for the below listed sites.

If you have questions or require additional information, please do not hesitate to contact us directly.

Thanks
