1.0 INTRODUCTION

This report outlines the methods and findings of Aqua Science Engineers, Inc. (ASE)'s quarterly groundwater sampling at the Romak Iron Works property located at 3250 Hollis Street in Oakland, California (*Figures 1 and 2*).

2.0 GROUNDWATER SAMPLING

On May 21, 1997, ASE measured the depth to water in the site monitoring well using an electric water level sounder. The well was also checked for the presence of free-floating hydrocarbons. The well contained a hydrocarbon sheen. Prior to sampling, the well was purged of four well casing volumes of groundwater using a pre-cleaned polyethylene bailer. The groundwater samples were decanted from the bailer into three (3) 40-ml volatile organic analysis (VOA) vials and two (2) 1-liter amber glass bottles. The samples were preserved with hydrochloric acid, labeled, placed in protective foam sleeves, and placed into an ice chest containing wet ice for transport to Chromalab, Inc. of Pleasanton, California (ELAP #1094) under chain of custody.

Well sampling purge water was contained in DOT 17H drums and stored on-site for handling by the client at a later date. See Appendix A for a copy of the well sampling field log.

3.0 ANALYTICAL RESULTS FOR GROUNDWATER

The groundwater samples were analyzed by Chromalab for total petroleum hydrocarbons as gasoline (TPH-G) by EPA Method 5030/8015M, total petroleum hydrocarbons as diesel (TPH-D) by EPA Method 3510/8015M, benzene, toluene, ethylbenzene and total xylenes (BTEX) and MTBE by EPA Method 8020 and hydrocarbon oil and grease (O&G) by Standard Method 5520 B&F. The analytical results are tabulated below in Tables One and Two, and the certified analytical report and chain of custody form are included in Appendix B.

TABLE ONE
Summary of Chemical Analysis of GROUNDWATER Samples
TPH-G, TPH-D, BTEX and MTBE
All results are in parts per billion

Sampling Date	TPH Gasoline	TPH Diesel	Benzene	Toluene	Ethyl Benzene	Total Xylenes	MTBE
08-04-93	12,000	---	7.6	9.7	9.9	29	---

02-16-96	---	<5,000
05-17-96	---	1,100
08-01-96	---	1,000
11-12-96	---	< 1,000
02-06-97	---	1,700
05-21-97	---	2,600
EPA METHOD	5520C	5520BF

4.0 CONCLUSIONS

Although high TPH-G and benzene concentrations (8,600 ppb and 720 ppb, respectively) continue to be detected in groundwater samples collected from monitoring well MW-1, there is a decreasing trend in concentrations. The benzene concentration of 720 ppb exceeded the California Department of Toxic Substances Control (DTSC) maximum contaminant level (MCL) for drinking water of 1 ppb. MTBE was detected at 170 ppb in the groundwater sample collected from monitoring well MW-1.

ASE recommends modifying the groundwater sampling schedule from quarterly to semi-annually. ASE requests a written response from the ACHCSA approving or disapproving this recommendation.

5.0 REPORT LIMITATIONS

The results of this investigation represent conditions at the time of the groundwater sampling, at the specific locations where the samples were collected, and for the specific parameters analyzed by the laboratory.

It does not fully characterize the site for contamination resulting from unknown sources, or for parameters not analyzed by the laboratory. All of the laboratory work cited in this report was prepared under the direction of an independent CAL-EPA certified laboratory. The independent laboratory is solely responsible for the contents and conclusions of the analytical data.

Aqua Science Engineers appreciates the opportunity to assist Romak Iron Works with its environmental needs. Should you have any questions or comments, please feel free to call us at (510) 820-9391.

Respectfully submitted,

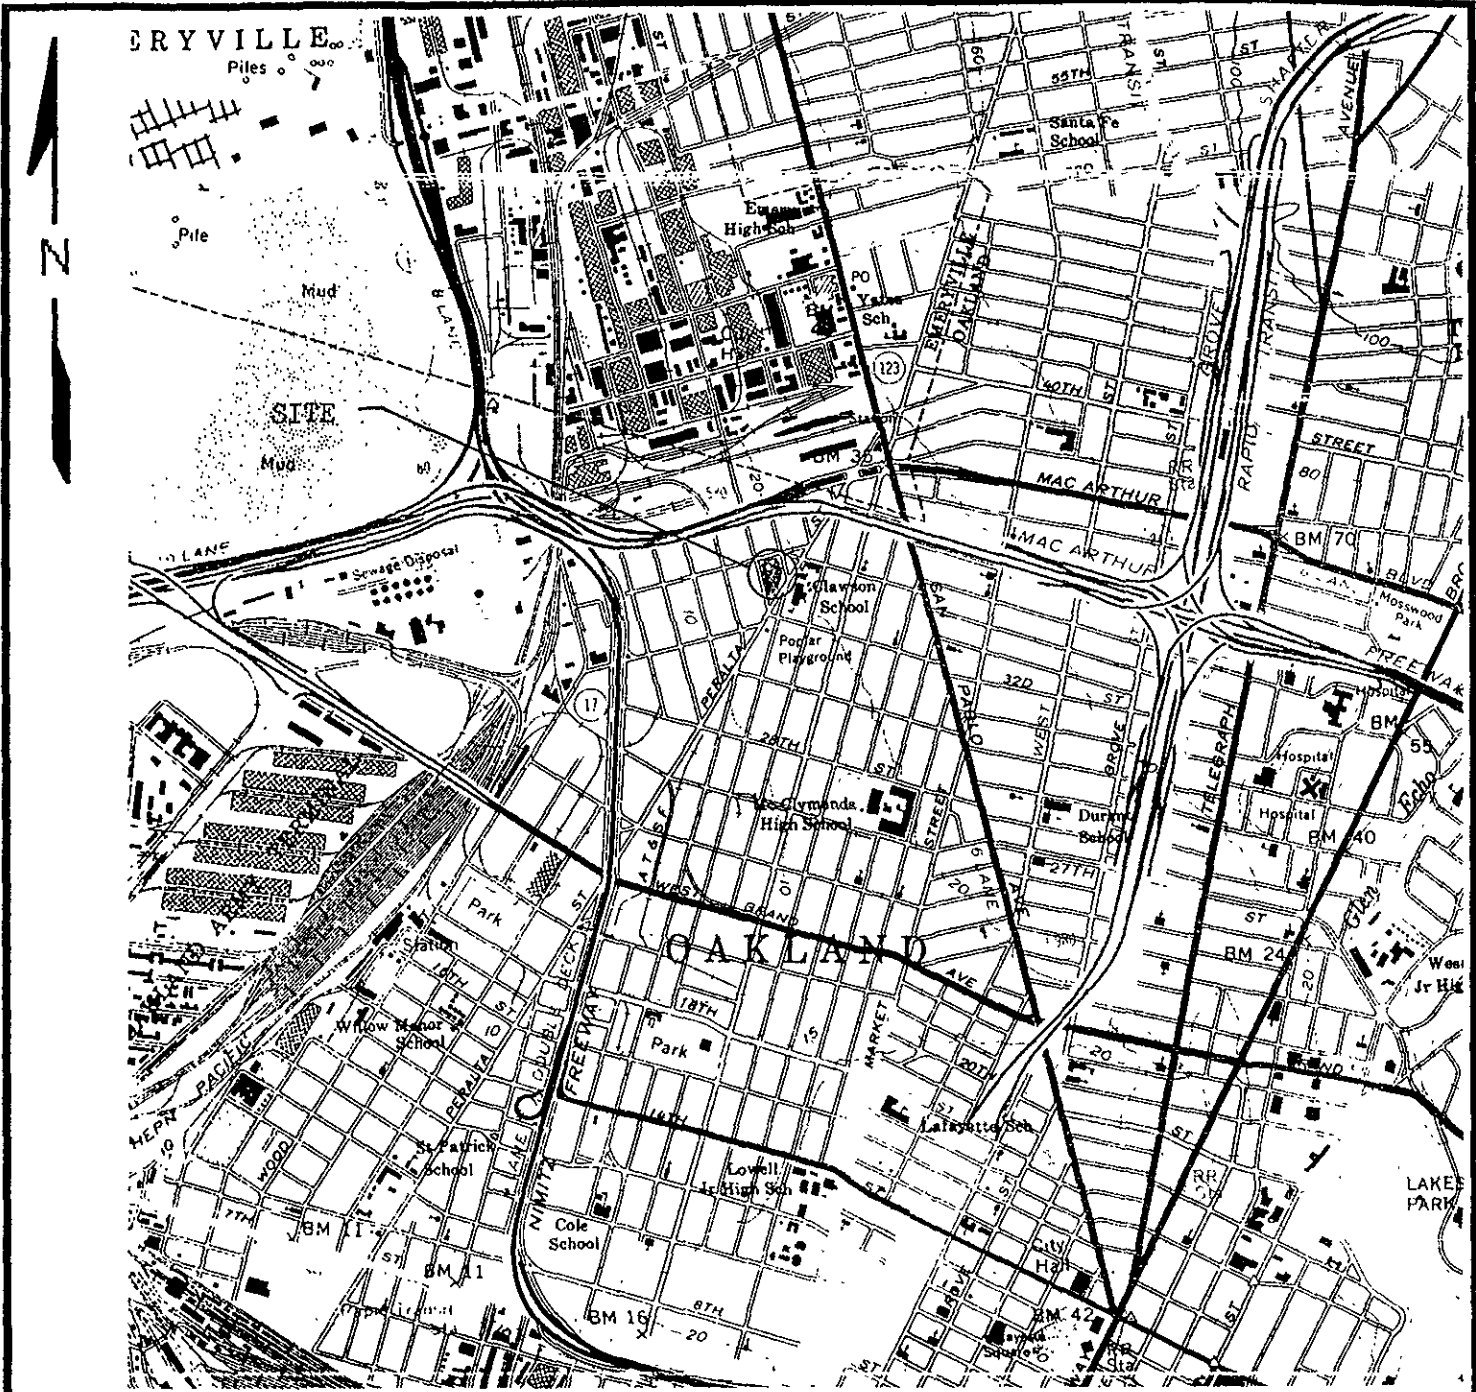

AQUA SCIENCE ENGINEERS, INC.

Scott Ferriman
Environmental Specialist

APPENDIX A

Well Sampling Field Log

WELL SAMPLING FIELD LOG

Project Name and Address: Romak Iron Works, Oakland, CA
 Job #: 2657 Date of sampling: 5-21-97
 Well Name: MW-1 Sampled by: S/F
 Total depth of well (feet): 21.65 Well diameter (inches): 2"
 Depth to water before sampling (feet): 6.64
 Thickness of floating product if any: Sherr
 Depth of well casing in water (feet): 15.01
 Number of gallons per well casing volume (gallons): 2.5
 Number of well casing volumes to be removed: 4
 Req'd volume of groundwater to be purged before sampling (gallons): 10
 Equipment used to purge the well: Dedicated Poly Bailer
 Time Evacuation Began: 14:40 Time Evacuation Finished: 15:20
 Approximate volume of groundwater purged: 10
 Did the well go dry?: no After how many gallons: -
 Time samples were collected: 15:30
 Depth to water at time of sampling: 6.87
 Percent recovery at time of sampling: 98%
 Samples collected with: Dedicated Poly Bailer
 Sample color: Cloudy Odor: Strong H₂S odor
 Description of sediment in sample: none

SAMPLES COLLECTED

Sample	# of containers	Volume & type container	Pres	Iced?	Analysis
MW-1	3	40 ml Vials	HE1	Yes	TPH/BTEX/MTBE
↓	1	1 L Amber	↓	↓	TPH
	1	1 L Amber	↓	↓	O+G BF

RE: Analysis for project ROMAK IRON WORKS, number 2657.

REPORTING INFORMATION

Samples were received cold and in good condition on May 22, 1997. They were refrigerated upon receipt and analyzed as described in the attached report. ChromaLab followed EPA or equivalent methods for all testing reported.

No discrepancies were observed or difficulties encountered with the testing.

Motor Oil was found in sample MW-1.
