Subject: **Shell-branded Service Station**
 1800 Powell Street
 Emeryville, California

Dear Mr. Weston:

Attached for your review and comment is a copy of the *Product Dispenser Sampling Report* for the above referenced site. Upon information and belief, I declare, under penalty of perjury, that the information contained in the attached document is true and correct.

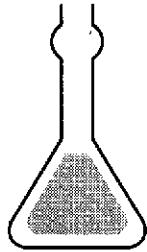

As always, please feel free to contact me directly at (559) 645-9306 with any questions or concerns.

Sincerely,

Shell Oil Products US

Karen Petryna

Re: **Product Dispenser Sampling Report**
Shell-Branded Service Station
1800 Powell Street, Emeryville, California
Incident #98995349, SAP Number 135266

Dear Mr. Weston:

On behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell), this report prepared by Toxicem Management Systems, Inc. (TOXICHEM) transmits the results of sampling conducted during station upgrade activities at the site referenced above. Included in this report is a brief discussion of the site description, scope of work, findings, and conclusions.

SITE DESCRIPTION

The Shell-Branded service station is located on Powell Street immediately adjacent and to the west of Interstate I-80 in Emeryville at the base of the Emeryville Peninsula (Emeryville Marina). Across Powell Street to the south, the East Shore State Park is located within the Emeryville Crescent (a horseshoe shaped tidal marsh with mudflat areas bounding San Francisco Bay). The Bay is located approximately 390 feet south of the site and the nearest creek (Temescal Creek) is located approximately ¼ mile south of the site within the Emeryville Crescent.

The local land use is predominantly a mixture of retail and commercial land uses. Multi-story (hotel and office) buildings bound the site to the west and north, respectively. Interstate 80 and off-ramp are present to the east of the site, and the Eastshore State Park and San Francisco Bay are to the south of the site.

A well survey was performed by Cambria (2004) through the Department of Water Resources. No active water supply wells were found within ½ mile radius of the site. Additionally, groundwater is not used in the study area and is designated as part of the Zone B: Emeryville Brownfields Groundwater Management Zone.

A total of seven groundwater monitoring wells are monitored on an annual basis. During the most recent groundwater monitoring event (November 10, 2004), static groundwater occurred within the on-site wells between 9.35 and 10.45 feet below ground surface (bgs) with flow to the south-southwest. The maximum concentration of total purgeable petroleum hydrocarbons

Alameda County
FEB 7 2005
Environmental Health

(TPPH) and benzene was present in Well S-10 at 660 micrograms per liter ($\mu\text{g}/\text{L}$) and 64 $\mu\text{g}/\text{L}$, respectively. The maximum concentration of methyl tertiary butyl ether (MtBE) was present in Well S-12 at 140 $\mu\text{g}/\text{L}$ located upgradient of the UST complex.

Thick, separate-phase liquid/tar has been present in Well S-9 at thicknesses up to 2.8 feet (with an outlier thickness measurement of 9 feet), therefore the well is not gauged, nor sampled during the monitoring event. The liquid has been analyzed by Shell Global Solutions and Triton Analytics Corporation. They concluded that:

- About 18% is gasoline range hydrocarbons.
- There was little material from the chromatographic region of about carbon number C₁₃ to C₁₈ or boiling points from about 455 to 600°F.
- Approximately 45% of the sample's weight lies in the vacuum gas oil range, or the carbon region above diesel (above 650°F) to the region of vacuum tower bottoms (pitch, asphalt).
- Approximately 35% of the material represents the heaviest fraction (1000°F+ to a max of C₁₁₀ or boiling point 1351°F).
- There are many types of roofing materials that would have a significant amount of hydrocarbons in the Vacuum Gas Oil (VGO) range as well the Vacuum Residue range (Pitch) (1000°F). Some roofing materials that are applied as a semi-liquid from a 5 gal bucket contain solvent that evaporates after application but then remained quite flexible due to the mixture of vacuum gas oils in addition to the pitch and other fillers. The roofing materials (hot melt) contain less of the VGOs and are therefore more rigid and not sticky after application.

In summary, the material present in Well S-9 can be attributable to the previous facility at the site: Beginning in 1884, the Paraffine Company operated an industrial complex on the Emeryville waterfront and filled areas along the shoreline through 1969. Based on boring log data, the fill at the Shell service station is at least 10 feet deep and appears continuous across the site. The fill consists of imported clayey, silty and sandy soil, industrial material and construction debris (concrete, bricks, tar paper and wood fragments). Products manufactured by Paraffine included: linoleum, roofing and building materials, paints, varnishes, lacquers and enamels.

SCOPE OF WORK

The scope of this investigation included the following activities:

- Collect soil samples from beneath the product dispensers and one location beneath product piping at the direction of the Alameda County Health Agency, Department of Environmental Health (ACDEH).
- Collect samples of residual materials generated during excavation activities and profile for disposal.

FINDINGS

Product Dispenser Sampling

Prior to TOXICHEM's arrival on September 22, 2004, Gettler Ryan, Inc. had removed the nine product dispensers to facilitate environmental sampling (Figure 1). At the direction of the ACDEH, TOXICHEM collected soil samples beneath each of the nine former product dispensers at between 4.5 and 5.5 feet bgs. Sample locations are shown on Figure 1. Soil analytical data is presented in Table 1. Field procedures are presented as Attachment A.

Product Line Replacement Sampling

Due to a product line failing a line test prior to station re-opening, the section of piping was replaced and soil samples were collected on October 12, 2004. Two soil samples were collected by TOXICHEM at the direction of the ACDEH at depths of 4.3 and 4.6 feet bgs (at sample location MPD-10, Figure 1). Deeper sampling and overexcavation were not feasible due to the newly installed product piping. An Unauthorized Release Report (URR) was submitted by Shell to the ACDEH via email on October 15, 2004 (a copy is included as Attachment A).

Soil Analytical Data

Soil analytical data are summarized below and are presented on Table 1. At the request of the ACDEH, all soil samples (including soil stockpile samples) were analyzed for total extractable petroleum hydrocarbons (TEPH) by EPA Method 8015M; TPPH, benzene, toluene, ethylbenzene and xylene (BTEX) compounds, MtBE, di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-Butyl alcohol (TBA), 1,2-DCA and EDB by EPA Method 8260B; and for total lead by EPA Method 6010B. The certified analytical reports and chain-of-custody documentation for the soil samples are presented as Attachment B.

- During the dispenser sampling performed on September 22, 2004 all nine soil samples contained detectable concentrations reported as TEPH. However, the laboratory noted that the low concentrations (1.5 to 85 mg/kg) reported in Samples MPD-1 through MPD-7 did not match their diesel standard and were mainly constituents in the late diesel range. The seven samples also did not contain detected concentrations of TPPH.
- Samples MPD-8 and MPD-9 were reported to contain 3,500 mg/kg and 320 mg/kg TEPH, respectively but were noted to be in the early diesel range and did not match the laboratory diesel standard. Interestingly, Sample MPD-8 which reported the maximum concentration as TEPH (3,500 mg/kg, though in the early diesel range and not indicative of diesel) did not contain any other detectable constituent analyzed with the exception of minor TPPH (54 mg/kg) and lead at 5.4 mg/kg.
- Similarly, the concentrations reported as TEPH beneath the replaced product lines were not indicative of diesel and were reported as being in the early diesel range (Samples MPD-10 at 4.3 and 4.6 feet bgs). The maximum concentrations of TPPH were associated with Sample MPD-10 at these two sample depths at 7,900 and 5,600 mg/kg, respectively. Additionally, the maximum site concentrations of toluene, ethylbenzene and xylenes were detected in Sample MPD-10 at 53 mg/kg (at 4.6 feet bgs), 26 mg/kg (at 4.6 feet bgs) and 630 mg/kg (at 4.3 feet bgs), respectively.

- Benzene was only reported above the detection limit in one of the eleven samples collected (MPD-5 at 0.031 mg/kg).
- MtBE was detected in three of the eleven samples collected at a maximum concentration of 0.64 mg/kg in Sample MPD-3. TBA was detected in two of the eleven samples collected at a maximum concentration of 0.032 mg/kg in Sample MPD-6. No additional oxygenates or lead scavengers were detected in the dispenser samples collected.
- Lead was detected in every soil sample analyzed at concentrations ranging from 4.2 mg/kg (MPD-10 at 4.3 feet bgs) to 150 mg/kg (MPD-1 at 4.5 feet bgs).

Residual Sampling and Disposal Documentation

During site upgrade activities, soil generated was stockpiled on visqueen, sampled and profiled for disposal. On October 5, 2004, approximately 30.5 tons of soil was hauled by Manley and Sons Trucking to Forward Landfill in Manteca, California. Disposal documentation is included in Attachment C.

To facilitate tank top upgrade activities, minor dewatering was required. A vacuum truck from Onyx Industrial was utilized to extract approximately 3,779 gallons of groundwater from the UST pit on September 15, 2004. The groundwater was hauled under Bill of Lading to the Shell Martinez Refinery for recycling and treatment (Attachment C).

All removed piping, sumps and miscellaneous equipment was contained within a storage bin and transported to ECI under hazardous waste manifest for disposal. Hazardous waste manifests are included in Attachment C.

CONCLUSIONS

Based on the results of this investigation, TOXICHEM concludes that:

- The concentrations reported as TEPH in the soil samples collected is not indicative of diesel fuel.
- The samples collected beneath the replaced piping (MPD-10 at 4.3 and 4.6 feet bgs) reported the maximum concentrations of TPPH (7,900 mg/kg and 5,600 mg/kg, respectively), however benzene was not detected in the samples.
- Benzene was only reported above the detection limit in one of the eleven samples collected (MPD-5 at 0.031 mg/kg).
- MtBE was detected in three of the eleven samples collected at a maximum concentration of 0.64 mg/kg in Sample MPD-3. TBA was detected in two of the eleven samples collected at a maximum concentration of 0.032 mg/kg in Sample MPD-6. No additional oxygenates or lead scavengers were detected in the dispenser samples collected.
- A total of approximately 3,779 gallons of groundwater was removed from the UST area.
- An Unauthorized Release Report (URR) was submitted by Shell to the ACDEH via email on October 15, 2004 (a copy is included as Attachment A).

FIELD PROCEDURES AND UNAUTHORIZED RELEASE REPORT

FIELD PROCEDURES

Soil Sampling Procedures

Soil samples were collected by advancing a hand driven stainless-steel sampling sleeve and brass ring into undisturbed soil, or alternatively by driving a brass sleeve into native soil excavated by the backhoe. Soil samples were retained in brass rings, capped with Teflon squares and plastic end caps, labeled, and immediately stored in an iced chest. The soil samples, along with a completed chain of custody were submitted to a certified laboratory.

Stockpile Sampling Procedures

The soil stockpile was sampled by driving brass sleeves into freshly exposed material and composited in the laboratory to represent the material in the stockpile. The brass sleeves were then capped with Teflon squares, affixed with plastic end caps, labeled, placed in an iced cooler and transported to the laboratory.

Robert,
As previously requested, please find attached the subsequent analytical report for the sampling performed beneath the product line that was tested. Please call or email any further questions you may have.

Thank you,
Ross

Sample Receipt Checklist

Submission #:2004- 10 - 0436

Checklist completed by: (initials) YM Date: 10/14/04

Courier name: STL San Francisco Client W.C.

Custody seals intact on shipping container/samples

Yes No Not Present

Chain of custody present?

Yes No

Chain of custody signed when relinquished and received?

Yes No

Chain of custody agrees with sample labels?

Yes No

Samples in proper container/bottle?

Yes No

Sample containers intact?

Yes No

Sufficient sample volume for indicated test?

Yes No

All samples received within holding time?

Yes No

Container/Temp. Blank temperature in compliance ($4^{\circ}\text{C} \pm 2$)?

Temp: 16 $^{\circ}\text{C}$ Yes No

Potential reason for $> 6^{\circ}\text{C}$ - Ice melted Ice in bags Not enough ice Not enough blue ice Samples in boxes

Sampled < 4 hr. ago? Ice not required (e.g. air or bulk sample)

Ice Present Yes No

Water - VOA vials have zero headspace?

No VOA vials submitted Yes No

(if bubble is present, refer to approximate bubble size and itemize in comments as S (small ~O), M (medium - O) or L (large - O))

Water - pH acceptable upon receipt? Yes No

pH adjusted- Preservative used: HNO₃ HCl H₂SO₄ NaOH ZnOAc - Lot # (s) _____

For any item check-listed "No", provide detail of discrepancy in comment section below:

Comments:

Project Management [Routing for instruction of indicated discrepancy(ies)]

Site: 1800 Powell Street, Emeryville

Dear Mr. Tinline

Attached is our report for your samples received on 09/22/2004 14:56

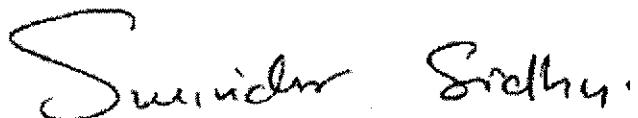

This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 11/06/2004 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.

You can also contact me via email. My email address is: ssidhu@stl-inc.com

Sincerely,

Surinder Sidhu
Project Manager

Subject: 1800-1/2 Powell Street, Emeryville - Soil analytical results

Robert,
At your request, please find attached the analytical report for the sampling I performed on September 22, 2004. I've also included a map for sample locations and designations.

The two samples collected on Tuesday beneath the product line that didn't pass the leak test were submitted on normal turn around time (10 days). We are having laboratory bump up the turn around time to as fast as they can do, but they're currently backed up and couldn't promise anything better than 5-day TAT at this point.

The Unauthorized Release Report was also submitted today as requested.

Please call or email any questions you may have.

Thank you,
Ross

Dear Mr. Tinline

Attached is our report for your samples received on 09/22/2004 14:56

This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 11/06/2004 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.

You can also contact me via email. My email address is: ssidhu@stl-inc.com

Sincerely,

Surinder Sidhu

Legend and Notes

Result Flag

edr

Hydrocarbon reported is in the early Diesel range, and does not match our Diesel standard

ldr

Hydrocarbon reported is in the late Diesel range, and does not match our Diesel standard

ndp

Hydrocarbon reported does not match the pattern of our Diesel standard

sd

Surrogate recovery not reportable due to required dilution.
