**SUBJECT: FIRST QUARTER OF 2004 GROUNDWATER
MONITORING AND SAMPLING AT THE PROPERTY**
Located at 400 San Pablo Avenue, in
Albany, California

Dear Mr. Stevens:

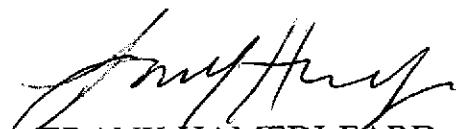

This report presents the results of first quarter of 2004 groundwater monitoring and sampling conducted by Enviro Soil Tech Consultants (ESTC), on March 2, 2004, at the subject site (Figure 1).

Seven monitoring wells (STMW-1 through STMW-5, MW-2 and MW-3) located on- and off-site were monitored for presence of floating products and/or any distinctive odor. Groundwater samples were collected from these monitoring wells and submitted to state-certified laboratory for analyses.

If you have any questions or require additional information, please feel free to contact our office at (408) 297-1500.

Sincerely,

ENVIRO SOIL TECH CONSULTANTS

FRANK HAMEDI-FARD
GENERAL MANAGER

LAWRENCE KOO, P. E.
C. E. #34928

PURPOSE:

The purpose of this quarterly monitoring and sampling investigation was to determine the direction of groundwater flow and the extent of subsurface hydrocarbons contamination at the site.

SITE DESCRIPTION:

The site is located at 400 San Pablo Avenue, in Albany, California, approximately one mile east of San Francisco Bay (Figure 1). The site is bordered by El Cerrito Creek to the north, San Pablo Avenue to the east and Adams Street to the west. The surrounding area comprises primarily light commercial and residential buildings (Figure 2).

BACKGROUND:

The site was vacant until the late 1950's when Plaza Car Wash and the adjacent Norge Dry Cleaner buildings were constructed. The three underground fuel storage tanks were installed on the site in 1970.

Observation of petroleum free-floating product in the adjacent El Cerrito Creek, on July 3, 1989, prompted the Albany Fire Department to install absorbent materials and a boom as a temporary containment measure. A storm drain, which borders the site on the west, was found to be the source of petroleum products discharged into El Cerrito Creek.

The inventory reconciliation records for Plaza Car Wash, reviewed by Kamur Industries in July 1989, showed discrepancies in the unleaded gasoline inventory. A product line test, conducted in mid-July 1989, confirmed a small leak in the unleaded gasoline fuel lines beneath the pump island. The leak was repaired and approximately five to ten cubic yards of gasoline contaminated soil was removed from beneath the line. Analytical results of a composite sample of the excavated soil revealed Total Petroleum Hydrocarbon (TPH) concentration of 7,500 parts per million (ppm).

In August 1989, Subsurface Consultants, Inc. (SCI) was retained by Kamur Industries to perform a site assessment. SCI drilled five soil borings and obtained soil samples for laboratory analysis. Four of the soil borings were converted to monitoring wells. Laboratory analysis showed the presence of gasoline contaminants in all soil and groundwater samples.

Per California Regional Water Quality Control Board (CRWQCB) staff request, water samples were also obtained from El Cerrito Creek and the storm drain outlet on August 3, 1989. Laboratory analysis revealed high levels of dissolved hydrocarbons at the storm drain outlet and low levels approximately 20 feet down-stream.

A soil vapor study (SVS), conducted by SCI in the area of the Plaza Car Wash and adjacent properties, revealed the presence of hydrocarbon contamination in the soil.

On September 19, 1989, Pacific Pipeline Survey conducted a video inspection of the Adams Street storm drain. The inspection revealed excess concrete along the pipe bottom, a bend area across the pipe section and large cracks in the pipe. The bend area was considered to be the most likely location for petroleum products to enter the storm drainpipe and eventually discharge into El Cerrito Creek.

Storm drainpipe joints exposed during sump installation procedures were sealed with mortar. All excavated soils found to be contaminated (when screened with organic vapor analyzer) were removed and stored on-site pending proper disposal. Stockpiled soils from the product line repair and sump installation areas were treated on-site and transported to the West Contra Costa Sanitary Landfill for disposal.

In December 1989, Kamur industries retained International Technology Environmental Services (ITES) to conduct monitoring and sampling of on-site monitoring wells, the Adams Street sump and El Cerrito Creek. Monitoring and sampling was conducted on a monthly basis from December 1989 through May 1990. All on-site wells showed high levels of dissolved hydrocarbons, and one well showed traces of floating product. The sump also indicated high levels of dissolved hydrocarbons. The El Cerrito Creek samples, taken after each significant rainstorm, showed non-detectable levels in the upstream station; the storm drain outlet samples showed moderate levels of dissolved hydrocarbons and the down-stream station showed fairly low to non-detectable levels.

In September 1990, Kamur Industries, Inc. retained Alpha Geo Services, Inc. (AGS) and STE to remove three underground tanks, conduct soil sampling and excavate, characterize and dispose of contaminated soil. In addition, STE conducted water sampling of El Cerrito Creek during rainy months per Regional Water Quality control Board (RWQCB) requirements and installed additional monitoring wells as requested by Alameda County Health Department (ACHD).

The details of tank removal, soil sampling and excavation of contaminated soil are described in AGS and STE reports titled "Removal of 3 Underground Storage Tanks" dated January 9, 1991 and "Underground Tank Soil Sampling and Excavation Report" dated January 15, 1991. The report on soil treatment and disposal is included in STE's report titled "Report on Soil Remediation at the Plaza Car Wash" dated May 13, 1991.

In February 1991, STE installed two on-site monitoring wells (STMW-1 and STMW-2). In addition, the on-site wells MW-1 and MW-4 were abandoned during soil excavation of the former underground tank area. The investigation detected no free-floating product in the wells. Dissolved hydrocarbons were detected in all on-site wells. The details of this subsurface investigation are described in STE's report titled "Report of Supplemental Subsurface Investigation for Kamur Industries, Inc. at the Plaza Car Wash" dated May 14, 1991.

ESTC has conducted quarterly monitoring and sampling of the monitoring wells since 1991. The details of the quarterly groundwater monitoring and sampling are described in the reports dated July 26, 1991; November 22, 1991; February 13, 1992; May 27, 1992; August 24, 1992; January 4, 1993; March 22, 1993; July 19, 1993; November 2, 1993; January 26, 1994; April 18, 1994; August 5, 1994; November 14, 1994; February 24, 1995; June 12, 1995; August 31, 1995; December 26, 1995; March 26, 1996; June 18, 1996; February 20, 1997; June 10, 1997; September 12, 1997; June 22, 1998; April 16, 1998; September 15, 1998; November 5, 1998; March 18, 1999 and June 3, 1999.

Per verbal request of Ms. Eva Chu with ACHCSA on September 27, 1999, ESTC has conducted limited groundwater sampling of the observation well on October 1, 1999. The details of this work are described in ESTC's report entitled "Limited Groundwater Sampling of Observation Well at the Property..." dated November 17, 1999.

Per the request of Mr. Murray Stevens of Kamur Industries, ESTC decommissioned the observation wells OB-1 and OB-2 on May 15, 2000. The details of wells abandonment are described in ESTC's report entitled "Wells Abandonment at the Property..." dated May 16, 2000.

Due to the petroleum odor and discoloration of excavated soil during excavation for installation of new underground reclaim water storage tank, per the request of Ms. Eva Chu, ESTC has conducted a limited soil sampling of the property. The details of this work are described in ESTC's report entitled "Limited Soil Sampling at the Property..." dated May 26, 2000.

On June 5, 2001, ESTC has prepared proposed work plan to estimate of Emission Rate of Chemicals from the fuel impacted soil and groundwater and to be used for preparation of human health risk assessment. The proposed work plan was revised, after verbal request from Ms. Eva Chu with ACHCSA on June 21, 2001. The details of revised work plan are described in ESTC's report entitled "Revised Proposed Work Plan for the Property..." dated June 22, 2001.

Per the approval of the work plan from Ms. Eva Chu with ACHCSA in a letter dated August 13, 2001, and December 11, 2001, and per Mr. Murray Stevens' authorization, on May 29, 2002, ESTC has retained Alpha Geo Services (AGS) to drill six soil borings by using direct push technology (Geoprobe) to collect soil and grab groundwater samples for estimation of Emission Rate of chemicals from the fuel impacted soil and groundwater. The details of this investigation are described in the report entitled "Soil and Groundwater Investigation for the Property..." dated June 10, 2002.

Per the request of ACHCSA, ESTC has resumed quarterly monitoring and sampling the on-site monitoring wells. The details of the quarterly groundwater monitoring and sampling are described in ESTC's report "Quarterly Groundwater Monitoring and Sampling at the Property..." dated September 22, 2003.

Per the request of Mr. Scott O. Seery, R.G. with ACHCSA, ESTC has complied historical events for the subject site in a report entitled "Historical Events Report for the Property..." dated October 1, 2003

SCOPE OF PRESENT WORKS:

- Developed all the wells.
- Measured depth-to-water table in the on-site and off-site monitoring wells and monitored for presence of any floating product and/or odor.
- Purged each monitoring well prior to sampling.
- Sampled the monitoring wells for laboratory analyses.
- Submitted water samples to a state-certified laboratory to be analyzed for Total Petroleum Hydrocarbons as gasoline (TPHg), Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX), Methyl Tertiary Butyl Ether (MTBE) and other hydrocarbon fuel oxygenated compounds (per EPA 8260B).
- Reviewed results and prepared a report of the investigation.

FIELD ACTIVITIES:

The seven monitoring wells (STMW-1 through STMW-5, MW-2 and MW-3) were monitored for presence of floating product(s) and/or any distinctive odor. Groundwater samples were collected and submitted to state-certified laboratory for analysis of TPHg, BTEX, MTBE and other hydrocarbons fuel oxygenated compounds (EPA 8260B).

GROUNDATER MONITORING:

On March 2, 2004, ESTC's staff monitored the seven wells to measure water depth and check for the presence of sheen and/or odor. No sheen or odor was detected in monitoring wells STMW-3 to STMW-5, MW-2 and MW-3. Rainbow sheen and petroleum odor were noted in monitoring wells STMW-1 and STMW-2.

The static shallow groundwater levels ranged from 5.70 feet to 8.58 feet below ground surface during the recent quarterly sampling event. Table 1 summarizes the depth-to-groundwater and observations made.

GROUNDWATER SAMPLING:

Water samples from the monitoring wells were collected analyzed for TPHg, BTEX, MTBE and other hydrocarbons fuel oxygenated compounds per EPA Method 8260B. Approximately three to four well volumes of water was purged from each well using a bailer before the sample was collected in order to assure the sample was representative of surrounding groundwater. A stainless steel bailer was used for sample collection. Water sampling equipment was decontaminated before and after each well sampling using Tri-sodium Phosphate (TSP) and water wash, followed by double rinsing. Groundwater samples were contained in a 40-millimeter glass vials with Teflon-lined caps. After labeling, the samples were immediately stored in a cold ice chest. Strict chain-of-custody procedures were maintained during sample acquisition, storage and transport. The sampling was conducted in accordance with ESTC's Standard Operation Procedure (SOP) (Appendix "D") and ACHCSA's guidelines for sampling and monitoring well.

GROUNDWATER FLOW DIRECTION:

Water elevation data were used to determine groundwater direction. Table 1 summarizes the groundwater elevations. The groundwater flow beneath the site was in a northeasterly direction as of March 2, 2004 (Figure 2).

ANALYTICAL RESULTS:

Groundwater samples from the six monitoring wells were submitted to Entech Analytical Labs, in Santa Clara, California to be analyzed for TPHg, BTEX, MTBE and other hydrocarbons fuel oxygenated compounds (EPA 8260B).

Groundwater samples from monitoring wells detected TPHg ranging from non-detectable (wells STMW-3 and STMW-4) to maximum 84000 microgram per liter ($\mu\text{g/L}$) (well STMW-1); Benzene ranging from non-detectable (wells STMW-3 to STMW-5) to maximum of 4200 $\mu\text{g/L}$ (STMW-1); Toluene ranging from non-detectable (wells STMW-3 to STMW-5, MW-2 and MW-3) to maximum of 5300 $\mu\text{g/L}$ (STMW-1); Ethylbenzene ranging from non-detectable (wells STMW-3 to STMW-5, MW-2 and MW-3) to maximum of 1800 $\mu\text{g/L}$ (STMW-1) and Total Xylenes ranging from non-detectable (wells STMW-3 to STMW-5, MW-2 and MW-3) to maximum of 9100 $\mu\text{g/L}$ (STMW-1). All seven monitoring wells detected MTBE below laboratory detection limit. Monitoring wells STMW-1, STMW-2, STMW-5 and MW-3 detected some other hydrocarbons fuel oxygenated compounds in the water samples. A summary of groundwater monitoring data and analytical results are presented in Table 1 and Table 2 (Appendix "A"). The laboratory analytical report is included in Appendix "E".

SUMMARY AND RECOMMENDATIONS:

No sheen or odor was detected in four wells (STMW-3 through STMW-5, MW-2 and MW-3). Rainbow sheen and petroleum odor were noted in monitoring wells STMW-1 and STMW-2. Five out of seven wells detected TPHg in groundwater samples. Four out of seven wells detected Benzene and other hydrocarbons fuel oxygenated compounds in groundwater samples. Two out of seven wells detected Toluene Ethylbenzene and Total Xylenes in groundwater samples.

The results of first quarter of 2004 groundwater monitoring event indicated that groundwater flows in a southeasterly direction parallel to El Cerrito Creek consistent with the previous groundwater flow direction. As the groundwater contour map shows (Figure 2) there is no or little hydraulic communication between the groundwater flow regime and the El Cerrito Creek.

As the data indicate the maximum contaminant level was detected in STMW-1 next to the former underground storage tanks (USTs). As such TPHg and Benzene were detected at maximum concentrations of 84000 and 4200 µg/L, respectively in a groundwater sample collected from STMW-1. As the results of the laboratory analyses indicate MTBE was not detected above laboratory detection limit in any of the groundwater samples. It appears that plume of the petroleum hydrocarbons are limited around the former USTs.

During the current monitoring event, 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenze, Isopropylbenzene and Naphthalene were also detected in wells STMW-1 and STMW-2. The maximum concentrations of 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, Isopropylbenzene and Naphthalene in STMW-1 were 3200, 860, 100 and 580 µg/L, respectively. Tetrachloroethene was also detected in wells STMW-5 (1.9 µg/L) and MW-3 (190 µg/L). In addition, n-Propylbenzene was detected in well STMW-2 at 71 µg/L in water sample, and cis-1,2-Dichloroethene, Trichloroethene and Vinyl Chloride were detected in well MW-3 at 440, 190 and 5.3 µg/L, respectively.

Sine five out of seven monitoring wells detected dissolved hydrocarbons in the groundwater, ESTC recommends continuation of quarterly groundwater monitoring and sampling of the monitoring wells.

A copy of this report should be forwarded to ACHCSA.

LIMITATIONS:

This report and the associated work have been provided in accordance with the general principles and practices currently employed in the environmental consulting profession. The contents of this report reflect the conditions of the site at this particular time. The findings of this report are based on:

- 1) The observations of field personnel.
- 2) The results of laboratory analyses performed by a state-certified laboratory.

It is possible that variations in the soil and groundwater could exist beyond the points explored in this investigation. Also, changes in groundwater conditions of a property can occur with the passage of time due to variations in rainfall, temperature, regional water usage and other natural processes or the works of man on this property or adjacent properties.

This report is issued with the understanding that it is the responsibility of the owner or his/her representative to ensure that the information and recommendations contained herein are called to the attention of the Local Environmental Agency.

The services that ESTC provided have been in accordance with generally accepted environmental professional practices for the nature and conditions of the work completed in the same or similar localities, at the time the work was performed. This report is not meant to represent a legal opinion. No other warranty, express or implied is made.

TPHg - Total Petroleum Hydrocarbons as gasoline

BTEX - Benzene, Toluene, Ethylbenzene, Total Xylenes

GW Elev. - Groundwater Elevation

Det. - Detected

ND - Not Detected (Below Laboratory Detection Limit)

* Well screens are not submerged

a - Laboratory analyses were analyzed by Anametrix Inc.

b - Laboratory analyses were analyzed by Carter Analytical Laboratory

c - Laboratory analyses were analyzed by Chromalab, Inc.

d - Laboratory analyses were analyzed by Geochem Labs

e - Laboratory analyses were analyzed by Priority Environmental

f - Laboratory analyses were analyzed by Argon Mobil Labs

g - Laboratory analyses were analyzed by North State Environmental

h - Laboratory analyses were analyzed by Entech Analytical Labs

i TPH as gasoline value reported possibly aged gasoline

j TPH as gasoline reported value is the result of higher boiling point compounds within the TPH as gasoline quantitation range

k TPH as gasoline reported value is the results of a high concentration of Benzene and of higher boiling point compounds within TPH as gasoline quantitation range

l TPH as gasoline value is the result of discrete peaks within the TPH as gasoline quantitation range

* Laboratory was not state certified since January 30, 1998

MTBE - Methyl Tertiary Butyl Ether

NMFP - Non-Measurable Floating Product

Perf. - Perforation

NA - Not Analyzed

N/A - Not Applicable

† Well screens are submerged

STANDARD OPERATION PROCEDURE

ENVIRO SOIL TECH CONSULTANTS

GROUNDWATER SAMPLING

Prior to collection of groundwater samples, all of the sampling equipment (i.e. bailer, cables, bladder pump, discharge lines and etc.) was cleaned by pumping TSP water solution followed by distilled water.

Prior to purging, the well "Water Sampling Field Survey Forms" were filled out (depth to water and total depth of water column were measured and recorded). The well was then bailed or pumped to remove four to ten well volumes or until the discharged water temperature, conductivity and pH stabilized. "Stabilized" is defined as three consecutive readings within 15% of one another.

The groundwater sample was collected when the water level in the well recovered to 80% of its static level.

Forty milliliter (ml.), glass volatile organic analysis (VOA) vials with Teflon septa were used as sample containers. The groundwater sample was decanted into each VOA vial in such a manner that there was a meniscus at the top. The cap was quickly placed over the top of the vial and securely tightened. The VOA vial was then inverted and tapped to see if air bubbles were present. If none were present, the sample was labeled and refrigerated for delivery under chain-of-custody to the laboratory. The label information would include a sample identification number, job identification number, date, time, type of analysis requested, and the sampler's name.

Order: 38125

Date Collected: 3/2/2004

Project Name: 400 San Pablo Avenue, Albany

Date Received: 3/4/2004

Project Number: 8-90-421-SI

P.O. Number: 8-90-421-SI

Project Notes:

On March 04, 2004, samples were received under documented chain of custody. Results for the following analyses are attached:

<u>Matrix</u>	<u>Test</u>	<u>Method</u>	<u>Comments</u>
Liquid	EPA 8260B	EPA 8260B	
	TPH as Gasoline	EPA 8015 MOD. (Purge)	

Chemical analysis of these samples has been completed. Summaries of the data are contained on the following pages. USEPA protocols for sample storage and preservation were followed.

Entech Analytical Labs, Inc. is certified by the State of California (#2346). If you have any questions regarding procedures or results, please call me at 408-588-0200.

Sincerely,

Patti Sandrock
QA/QC Manager
