Alameda, CA 94502
Contact: Mark Detterman
(510) 567-6876

The following is a report detailing the results of the June 2015 quarterly groundwater sampling at the Albany Hill Mini Mart property. This sampling was conducted as required by the ACHCSA. The sampling schedule was reverted to a quarterly monitoring schedule at the request of the ACHCSA to monitor for possible rebound from the discontinuation of groundwater remediation, which ceased on March 2, 2015. ASE prepared this report on behalf of Jasminder and Sonia Sikand, the responsible party.

2.0 GROUNDWATER FLOW DIRECTION AND GRADIENT

On June 30, 2015, ASE measured the depth to groundwater in all ten site monitoring wells using an electric water level sounder. The surface of the groundwater was also checked for the presence of free-floating hydrocarbons or sheen. No sheen or free-floating hydrocarbons were observed in any of the monitoring wells. Groundwater elevation data is presented in Table One. A groundwater potentiometric surface map is presented as Figure 2. The general groundwater flow direction is toward the east and north. The groundwater flow direction at the site varies significantly from quarter to quarter, and was likely previously effected by the ozone-sparging taking place at the site. In general, the groundwater gradient is much flatter this quarter than in previous sampling periods,

3.0 GROUNDWATER SAMPLE COLLECTION AND ANALYSIS

On June 30, 2015, ASE collected groundwater samples from all ten monitoring wells. Prior to sampling, each monitoring well was purged of at least three well casing volumes of groundwater using disposable polyethylene bailers. The parameters pH, temperature and electrical conductivity were monitored during the well purging, and samples were not collected until these parameters stabilized. Monitoring well MW-9 went dry prior to completion of the purging of three well casing volumes and was allowed to recover for two hours prior to sampling. Groundwater samples were collected from each well using the same polyethylene bailers and were decanted from the bottom of the bailers using low-flow emptying devices into 40-ml volatile organic analysis (VOA) vials, pre-preserved with hydrochloric acid. The samples were capped without headspace, labeled, and placed in coolers with wet ice for transport to McCampbell Analytical, Inc. of Pittsburg, California (ELAP #1644) under appropriate chain-of-custody documentation. Well sampling field logs are presented in Appendix A.

The well purge water was placed into a 55-gallon steel drum and labeled for temporary storage until proper disposal could be arranged.

The groundwater samples were analyzed by McCampbell Analytical for total petroleum hydrocarbons as gasoline (TPH-G), benzene, toluene, ethyl benzene, and total xylenes (collectively known as BTEX), fuel oxygenates including methyl tertiary-butyl ether (MTBE), and naphthalene by EPA Method 8260B. Analysis for total petroleum hydrocarbons as diesel (TPH-D) by EPA Method 8015M was discontinued as agreed upon by the Alameda County Health Care Services Agency. The analytical results for this and previous sampling events are summarized in Table Two. The most recent certified analytical report and chain-of-custody documentation are included as Appendix B.

4.0 RESULTS AND CONCLUSIONS

- In groundwater samples collected from monitoring well MW-1, MTBE was detected at a concentration of 2.2 parts per billion (ppb). No other hydrocarbons were detected. Overall, there has been a significant long-term decreasing trend of hydrocarbon concentrations in this well, and the current concentration is at a historic low.

Aqua Science Engineers, Inc. 55 Oak Court, Suite 220, Danville, CA 94526
(925) 820-9391 - Fax (925) 837-4853 - www.aquascienceengineers.com

- No TPH-G, BTEX, naphthalene or oxygenates were detected in groundwater samples collected from monitoring well MW-2. This is the 15th consecutive sampling event that no hydrocarbons or oxygenates were detected in this well.
- No TPH-G, BTEX, naphthalene or oxygenates were detected in groundwater samples collected from monitoring well MW-3. This is the 9th time in the last 11 sampling events that no hydrocarbons or oxygenates were detected in groundwater samples from this well.
- Groundwater samples collected from monitoring well MW-4 contained 200 ppb TPH-G, 28 ppb benzene, 7.7 ppb MTBE, 2.2 ppb TBA, and 0.53 ppb DIPE. These results are very similar to the previous couple sampling events. There has been a significant long-term decreasing trend in hydrocarbon concentrations from this well.
- Groundwater samples collected from monitoring well MW-5R contained 1,800 ppb TPH-G and 1.9 ppb benzene. These results show a slight decrease in concentrations from the previous quarter, and there is a long-term decreasing trend in hydrocarbon concentrations from this well. The hydrocarbon concentrations are at their lowest since 2010. No toluene, ethyl benzene, xylenes, oxygenates or naphthalene were detected.
- No BTEX, naphthalene or oxygenates were detected in groundwater samples collected from monitoring well MW-6 during this sampling period, other than 1.2 ppb MTBE. This MTBE concentration is a decrease from the previous quarter. The TPH-G concentration this quarter is 330 ppb, which is an increase from the non-detectable concentration last quarter. No BTEX has been detected in this well since 2009. There has been a long-term decreasing trend in hydrocarbon concentrations from this well, and currently there have only been sporadic TPH-G and MTBE concentrations detected.
- No TPH-G, BTEX, naphthalene, or oxygenates were detected in groundwater samples collected from monitoring well MW-7. This is the 15th time in the last 17 sampling events and the 8th consecutive sampling event, that no hydrocarbons or oxygenates were detected in groundwater samples collected from this well.
- No hydrocarbons or oxygenates were detected in groundwater samples collected from monitoring well MW-8 this quarter. This is the 16th consecutive sampling event that no hydrocarbons were detected in groundwater samples collected from this well.
- Groundwater samples collected from monitoring well MW-9 contained 1,500 ppb TPH-G, 41 ppb benzene, 110 ppb ethyl benzene, 160 ppb total xylenes, and 33 ppb naphthalene. These results show a slight increase in TPH-G, benzene and ethyl benzene concentrations and a slight decrease in total xylenes and naphthalene concentrations from the previous sampling event. There has been a long-term decreasing trend in hydrocarbon concentrations in this well, with the xylenes and naphthalene concentrations at historic lows.
- The only compounds detected in groundwater samples collected from monitoring well MW-10 during this sampling period were 150 ppb TPH-G and 2.1 ppb MTBE. These concentrations are very similar to the previous sampling event.

Aqua Science Engineers, Inc. 55 Oak Court, Suite 220, Danville, CA 94526

Concentrations exceeding Environmental Screening Levels¹ (ESLs):

- In MW-1, no concentrations exceeded ESLs.
- In MW-2, no concentrations exceeded ESLs.
- In MW-3, no concentrations exceeded ESLs.
- In MW-4, TPH-G, benzene and MTBE concentrations exceeded ESLs.
- In MW-5R, TPH-G and benzene concentrations exceeded ESLs.
- In MW-6, the TPH-G concentration exceeded the ESL.
- In MW-7, no concentrations exceeded ESLs.
- In MW-8, no concentrations exceeded ESLs.
- In MW-9, TPH-G, benzene, ethyl benzene, total xylene and naphthalene concentrations exceeded ESLs.
- In MW-10, the TPH-G concentration exceeded the ESL.

TPH-G, benzene, and MTBE isoconcentration maps are presented as Figures 3, 4, and 5, respectively.

5.0 RECOMMENDATIONS

As requested in the January 14, 2015 letter from the Alameda County Health Care Services Agency as well as the May 7, 2015 modified workplan approval letter, the following will take place during the next quarter:

- A third quarter groundwater monitoring event will take place in September 2015.
- ASE recommends the removal of MW-2, MW-3, MW-7 and MW-8 from the groundwater monitoring program, since no hydrocarbons have been detected in any of these wells for at least 5 years.

6.0 REPORT LIMITATIONS

The results presented in this report represent the conditions at the time of the groundwater sampling, at the specific locations where the groundwater samples were collected, and for the specific parameters analyzed by the laboratory. It does not fully characterize the site for contamination resulting from sources other than the former underground storage tanks and associated plumbing at the site, or for parameters not analyzed by the laboratory. All of the laboratory work cited in this report was prepared under the direction of an independent CAL-DHS certified laboratory. The independent laboratory is solely responsible for the contents and conclusions of the chemical analysis data.

¹ As presented in the "Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater" document prepared by the California Regional Water Quality Control Board, San Francisco Bay Region dated December 2013.

	6/30/15		11.03	35.87

Notes:

Data prior to September 10, 2004, including survey data, is based on tables compiled by AARS.

* Top of casing elevations were initially surveyed to an arbitrary benchmark. The elevations were resurveyed on November 11, 2002 with respect mean sea level.

ESL		100	100	1.0	40	30	20	NE	12	5.0	Varies

Notes:

Data prior to August 2004 is based on a table compiled by AARS - ASE has not checked results against original laboratory reports.

* Does not match diesel pattern

** Confirmed by GC/MS method 8260

ESL = Environmental screening levels presented in the "Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater (May 2008)" document prepared by the California Regional Water Quality Control Board, San Francisco Bay Region for sites where groundwater is a current or potential source of

Most recent concentrations are in **Bold**.

Non-detectable concentrations noted by the less than sign (<) followed by the laboratory detection limit.

NE indicates that no ESL has been established for this compound.

"When Quality Counts"

Analytical Report

WorkOrder: 1507098

Report Created for: Aqua Science Engineers, Inc.

55 Oak Court Suite 220
Danville, CA 94526

Project Contact: Dave Allen

Project P.O.:

Project Name: #3934; Albany Hill

Project Received: 07/02/2015

Analytical Report reviewed & approved for release on 07/10/2015 by:

Angela Rydelius,
Laboratory Manager

*The report shall not be reproduced except in full, without the written approval of the laboratory.
The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.*

Glossary of Terms & Qualifier Definitions

Client: Aqua Science Engineers, Inc.
Project: #3934; Albany Hill
WorkOrder: 1507098

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DUP	Duplicate
EDL	Estimated Detection Limit
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

a3	sample diluted due to high organic content.
e4	gasoline range compounds are significant.
e8	kerosene/kerosene range/jet fuel range
e11	stoddard solvent/mineral spirit (?)

Quality Control Qualifiers

F2	LCS recovery for this compound is outside of acceptance limits.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.
