Report - Fuel Leak Case No. R00000281; (Global ID # T0600101651); BP #11104
1716 Webster Street, Alameda, CA 94501

Dear Mr. Delong,

Please see attached the "Timeline, Diesel and Waste Oil Source Evaluation, and Current Site Conditions" Report requested on March 14, 2014 by Mr. Mark E. Detterman, PG, CEG, Senior Hazardous Materials Specialist with the Alameda County Environmental Health Services (ACEHS).

This Report was prepared in a manner consistent with the level of care and skill ordinarily exercised by professional geologists and environmental scientists.

Timeline, Diesel and Waste Oil Source Evaluation and Current Site Conditions Report

1716 Webster Street, Alameda, CA 94501

EXECUTIVE SUMMARY

<u>YEAR</u>	<u>SUMMARY NOTES</u>
1897	A chinese laundry existed on site at #1720 Webster St. (Source: historical Sanborn Fire Insurance Maps, attached).
1909-1911	A chinese laundry listed at #1720 Webster St. (Source: historical City Directories, attached)
1915-1933	A garage, fuel station, repair, and auto parking on site. (Source: historical City Directories, attached)
1933-2008	1802 Buena Vista Ave. (adjacent) listed as a fuel station as follows: Standard Station (1933-1935), Station Inc., gas station (1939), Chevron Station (1975-2008) . (Source: historical City Directories, attached)
1937-2013	Property listed as fuel station as follows: General Petroleum Corp. (1937), Morine Harold Gas Station (1939, 1941), Randall Beverly Margt Gas Station (#1728), Carson Mobil Service (1962), Westgate Mobil Auto Service Center (1986), Webster BP Oil (1991- 2000), Union 76 (2006-2008), Webster 76 (2013) - (Source: historical City Directories, attached)
1943	"Gibson Wm W Jessie, Gas Station located" at #1801 Webster St. is listed at the adjacent site northwest (Source: historical City Directories, attached)

1948 and 1950	<p>A gasoline and oil station existed on site, A smaller "WO"-waste oil UST is located in the southeastern portion of the subject property. (Source: Sanborn Fire Insurance Maps, attached).</p> <p>Another gasoline station labeled gasoline and oil was located at the adjacent site to the north across Buena Vista Avenue (#1802 Webster St.). (Source: Sanborn Fire Insurance Maps, attached).</p>
1955	"B & L Cleaners" at #653 Buena Vista Ave. (Source: historical City Directories, attached)
1987	The shape of USTs and structures on site has changed. No waste oil USTs noted. (Source: Sanborn Fire Insurance Maps, attached).
May 30, 1990	Existing USTs installed in 1983.
June 27, 1990	To submit permit for a new 1,000-gallon waste oil UST
September 26, 1990	Sketch showing USTs in the northwestern corner of the property.
October 4, 1990	Hand-written field notes: <i>1,000-gallon water pumped out total (fuel, <u>oil</u> + water)</i>
July 25, 1991	Notice of Violation - requirements for the double-walled waste oil tank which was installed in 1987
September 13, 1991	Second Notice of Violation
June 26, 1992	BP Meeting w/LOP - notes Ms. Shiu mentioned that this office has some information to indicate that a 550-gallon waste oil tank was removed from the site.
July 8, 1992	TOG and TPH-D and HVO Not Detected in a soil sample from MW-3 next to an "underground waste oil tank"
August 21, 1992	Environmental Assessment - Used oil is also stored on-site, until transported for off-site disposal.

- July 27, 1994** Letter naming the following RPs: Alfred De Clercq, Scott Hooton-BP Oil, Chester Bennett-Tosco Corporation
"Date First Reported 09/21/90
Substance: Diesel
Petroleum: (X)Yes"
- Note: substance involved "Diesel" ?
- June 6, 2001** Letter from BP to SWRCB- regarding 1987 Waste Oil UST Removal. SWRCB: "Concentrations of total hydrocarbons and Volatile Organic Compounds are within acceptable limits established by the regulatory agencies. Therefore, we recommend no further investigation at this time."
- Pre-1990 Permits: **BP's consultants have been unable to locate documentation showing the underground tanks on this site were permitted prior to January 1, 1990.**
- June 11, 2001** Letter from ACHCSA - All components of the fuel delivery system are continuously monitored for releases.
The used oil tank is double wall FRP with continuous leak detection in the annular space.
- November 2, 2009** ConocoPhillips no longer Owner/Operator for Site.
- 2009-2014** The USTs are cathodically protected steel, double-walled underground storage tanks (UST). The USTs are equipped with electronic leak detection, overflow and spill prevention devices.. The piping is monitored via electronic leak According to reports on the tightness testing provided (attached) there has been no indication of a release from the current tank system.
- June 22, 2012** email from: Dilan Roe of ACHCSA - Subject: Case Evaluation & Justification for No Further Action,
- A sample of the free product was collected in recovery well RW-1 and one sample each from the low, mid, and high octane unleaded gasoline dispensers. The chromatogram of the free product in well RW-1 has some of the characteristics of a middle distillate either diesel fuel or fuel oil, and states that although the RW-1 chromatogram is not typical of diesel or fuel oil chromatograms seen, it does not rule out the possibility that RW-1 is some unique formulation of diesel fuel or fuel oil.

August 21, 2013

Conceptual Site Model and Case Closure Request

This is a detailed, thorough, and complete Case Closure Request Report. Only an executive summary is presented below.

In Section 1.2 "Site Background" of this Report, it is stated "The Site has operated as a gasoline fueling station since the environmental case was open in 1990."???

In 1983, one waste oil UST, was installed at the Site. The waste oil UST was replaced in 1987 by Mobil Oil Corporation with a 1,000 gallon capacity double wall fiberglass UST.

In 2009, ConocoPhillips sold the station to United Brothers Enterprise, Inc. (UBE), who subsequently replaced the 6,000 gallon gasoline tank with a 6,000 gallon steel diesel tank in the same year.

During the third quarter 2011 routine monitoring and sampling event, 0.06 feet of light non-aqueous phase liquid (LNAPL) was measured in well RW-1. In August 2011, a fuel fingerprint samples of LNAPL was collected from well RW-1, and from the gasoline dispensers. Based on the analytical results, RW-1 had some of the characteristics of a middle distillate either diesel fuel or fuel oil. Based on these results, "the free product in RW-1 cannot be identified and does not appear to be a fuel product from former operations at the Site".

September 6, 2013

One 1,000-gallon waste oil underground storage tank (UST) was removed from the subject site. Concentrations up to 30.9 mg/ kg TPHd and 213 mg/ kg TPHmo were detected in soil, and concentrations up to 18,200 micrograms per liter ($\mu\text{g/l}$) TPHd and 46,200 $\mu\text{g/l}$ TPHmo were detected in groundwater.

SITE HISTORY AND ENVIRONMENTAL COMPLIANCE ACTIVITIES

Numerous detailed and thorough reports have been recently prepared by Broadbent, Inc. on behalf of Atlantic Richfield Company's and by others since 1990; therefore, only significant data related to the underground oil or diesel tanks and copies of significant documents is copied and/or presented below. Significant information within these documents is marked in boldface and underlined below.

May 30, 1990

Letter Consultant to ACHCSA

Existing USTs installed in 1983. There are two observation wells at this site.

June 27, 1990

Letter from ACHCSA to Lou Parisi of BP Oil Company

Re: Five-Year Permits for Operation of Four Underground Storage Tanks at BP Oil company

We have recently reviewed and accepted the plans for the replacement of the dispensers - and of associated piping as is needed - for three underground gasoline storage tanks (sized 12,000 gallons, 10,000 gallons; and 6,000 gallons) at the above facility. To obtain five-year operating permits for these tanks and for the **1,000 gallon waste oil tank** also on site, you must submit the following information to our office:

September 26, 1990

Sketch done by ACHCSA's Inspector showing USTs in the northwest corner of the property.

October 4, 1990

ACHCSA's Inspector hand-written field notes: *1,000-gallon water pumped out total (fuel, oil + water)*

July 25, 1991

Notice of Violation

3) For the double-walled **waste oil tank** which was **installed in 1987**, you are required to submit the following items:

- a) Correctly completed underground storage tank permit application - Form B. An application form is enclosed for your use;
- b) Initial tank and pipeline precision test results, per Section 2635(7), CCR and Section 25289(b) of the Health and Safety Code;
- c) A written routine monitoring procedure/plan per Section 2632(d)(1) or 2634(d)(2), Title 23, CCR, which includes, where applicable: the frequency of performing the monitoring method, the methods and equipment to be used for monitoring, where monitoring will be performed, the location(s) from which the monitoring will be performed, the name(s) or title(s) of the person(s) responsible for performing the monitoring and/or maintaining the equipment, and the reporting format;

Please be advised that the written monitoring plan should include information about calibration and/or maintenance of continuous electronic leak detection system and automatic line leak detector.

September 13, 1991

Second Notice of Violation

Permit to Operate four USTs (three single-walled product and one double-walled waste oil) exist at the subject facility.

June 26, 1992

BP Meeting w/LOP - notes

Ms. Shiu mentioned that this office has some information to indicate that a 550-gallon waste oil tank was removed from the site.

July 8, 1992

TOG and TPH-D and HVO was analyzed only in a soil sample collected on 7/8/92 at 6 ft bgs from MW-3 located north and next to an "underground waste oil tank" but was not detected.

August 21, 1992

Environmental Assessment

Unleaded gasoline (regular, plus and super) is the only fuel presently stored and dispensed at the site. **Used oil** is also stored on-site, until transported for off-site disposal.

September 1992

The site is located at 1716 Webster Street in Alameda, California (Figure 1) and is currently owned and operated by BP Oil Company (BP). In September 1990, Kapraelian Engineering, Inc. (KEI) supervised the removal of product delivery lines and existing dispenser islands. KEI collected soil samples from the site walls of the excavation and one ground water sample from the excavation. Laboratory analysis of the samples indicated that petroleum hydrocarbons were present in the subsurface soils and ground water. At the request of the Alameda County Department of Environmental Health (ACDEH), KEI supervised additional soil excavation in the vicinity of the dispenser islands to remove hydrocarbon impacted soils. The extent of the adsorbed hydrocarbons in subsurface soils was not completely delineated by additional excavation and soil sampling.

July 27, 1994

Letter from the Alameda County Health Care Services Agency to Responsible Parties (RPs) and Notice of Requirement to Reimburse

Addressed to the following RPs:

Alfred De Clercq

Scott.Hooton
BP Oil

Chester Bennett
Tosco Corporation

"Date First Reported 09/21/90

*Substance: **Diesel***

Petroleum: (X)Yes"

Note: substance involved "Diesel" ?

May 19, 1996

Permit to Operate four USTs (three single-walled product and one double-walled waste oil) exist at subject facility.

June 6, 2001

Letter from BP to SWRCB, CLAIM No. 016524, Former BP Site No. 11104, 1716 Webster Street, Alameda, CA

RE: 1987 Waste Oil UST Removal

Mobil Oil Corporation removed a waste-oil UST during 1987. Based on the results of Mobil Oil Corporation removed a waste-oil UST during 1987. Based on the results of soil testing performed at the time of the removal, Mobil's consultant made the following conclusion: "**The analytical results indicate that the concentrations of total hydrocarbons and Volatile Organic Compounds are within acceptable limits established by the regulatory agencies. Therefore, we recommend no further investigation at this time.**"

BP's files do not contain any correspondence from the Alameda County Health Care Services Agency requiring any follow-up work associated with the 1987 waste-oil tank removal. It seems reasonable, then, to conclude that no cleanup directives were issued.

Pre-1990 Permits

BP's consultants have been unable to locate documentation showing the underground tanks on this site were permitted prior to January 1, 1990. I understand that the Underground Storage Tank Cleanup Fund will accept reasonable documentation showing the underground tanks were permitted prior to January 1, 1990, including a signature from your agency to that effect. BP understands that the Alameda County Health Care Services will provide this documentation in the near future. I expect to receive this sometime within the next 60 to 90 days, so please do not render BP's claim ineligible in the meantime.

June 11, 2001

Letter from ACHCSA

Subject: Underground storage tank operating permit, 1716 Webster Street, Alameda CA 94501

The installed system at the above location includes three single wall fiberglass reinforced plastic (FRP) motor vehicle fuel tanks (MVF). The double wall FRP pressurized piping is monitored continuously at the submersible turbine sump (STP). Tank leak detection is performed using an automatic tank gauge which continuously gathers product elevation data in each of the three tanks. The data is analyzed by the monitoring console and reported as a hard copy printout on a monthly basis.

All components of the fuel delivery system are continuously monitored for releases. The electronic monitor, Veeder Root TLS 350, is configured to shut down the appropriate turbine(s) if the monitor is in alarm as a result of a product detection in the STP. The turbine(s) will also shut down if power to the monitor is disconnected. Dispenser containment is equipped with mechanical shear valve shutdown of product lines if liquid is detected in the containment.

The used oil tank is double wall FRP with continuous leak detection in the annular space. The tank is filled directly through a straight drop into the tank and visually monitored to prevent overfilling.

November 2, 2009

ConocoPhillips no longer Owner/Operator for Site.

June 22, 2012

email from: Dilan Roe of ACHCSA

Subject: Case Evaluation & Justification for No Further Action, RO0000281, RO0000076, RO0000100

I have focused mainly on the Former BP Station No. 11104 (RO_0000281) due to the discovery of free product in recovery well RW-1 located adjacent to the underground storage tank pit in during the Third Quarter 2011 and 1st Quarter 2012 groundwater monitoring events.

"First Quarter 2012 Monitoring Report (March 30, 2012, Broadbent & Associates, Inc.) In August 2011, BAI reportedly collected a sample of the free product in recovery well RW-1 and one sample each from the low, mid, and high octane unleaded gasoline dispensers. The four samples were submitted to Torkelson Geochemistry, Inc. to be analyzed by capillary gas chromatography analysis. Based on the results of the hydrocarbon fingerprint analysis, Torkelson concluded that the chromatogram of the free product in well RW-1 has some of the characteristics of a middle distillate either diesel fuel or fuel oil, and states that although the RW-1 chromatogram is not typical of diesel or fuel oil chromatograms he has seen, it does not rule out the possibility that RW-1 is some unique formulation of diesel fuel or fuel oil.

Based on these results, both Broadbent and Closure Solutions conclude that the free product in well RW-1 cannot be identified and does not appear to be a fuel product from site operations.

However, based on a discussion with ACEH CUPA, subsequent to ConocoPhillips sale of the station to United Brothers Enterprise, Inc. (UBE) in 2009, the 6,000 gallon gasoline tank was replaced with a 6,000 gallon steel diesel tank in the same year. ACEH is concerned that in light of the discovery of free product in the well and the existence of a diesel tank at the site, that neither Broadbent nor Closure Solutions has made recommendations for interim corrective actions and that Closure Solutions contends that the site is still a candidate for low-risk closure. I will be submitting a formal directive letter requesting further site investigation, however advise Atlantic Richfield Company to be proactive in this matter.

August 21, 2013

Conceptual Site Model and Case Closure Request.

This is a detailed, thorough, and complete Case Closure Request Report. Only data significant for our report is presented below.

In Section 1.2 "Site Background" of this Report, it is stated "The Site has operated as a gasoline fueling station since the environmental case was open in 1990."???

Free product has been removed to the extent possible free product has not been detected at the Site during monitoring history at the Site, with the following exception. Recently, a thin (maximum thickness of 0.06 feet) has been measured in RW-1 during the third quarter 2011, first quarter 2012, and third quarter 2012. A thin sheen was noted during the first quarter 2013, however the thickness of this product was too thin to be measured. At the time when the LNAPL was first noted during the third quarter 2011, a sample of this product was collected and submitted for fingerprinting analysis. The chromatogram pattern which the product resembled most closely was the diesel standard, but was not completely similar. However, it was determined in this reporting that the LNAPL was not gasoline product.

As described in the Site history (Appendix A), BP operated a service station from 1983 to 1994, at which time it was sold to ConocoPhillips. The station currently dispenses diesel, however, BP never dispensed diesel during its historic fueling operations. In addition, a records review at the ACEH CUPA department noted that the current UST used for diesel storage located directly adjacent to RW-1, the well where the LNAPL has been measured. During the most current groundwater monitoring and sampling event, LNAPL observed in well RW-1 was sampled and GRO was detected at a concentration of 110 ug/L, a concentration not indicative of proximity to free-phase gasoline. Therefore, the LNAPL noted during recent monitoring events is a result of former BP service station operations. It is unclear if the source of the LNAPL noted is from the adjacent diesel USTs or an incidental surface spill from an adjacent planter or crack in the station paving. Additionally, no LNAPL has been observed in adjacent well MW-1, indicating the current lateral extent of any LNAPL is small. Since none of these sources are from BP operations, the free-product is not the responsibility of ARC to remove. Since no other free product has been observed at the Site, it has been "removed to the extent possible."

Wells were installed in 1992 and 1993, soil samples from 4.5 to 6 feet bgs were collected in each of these locations. A full suite of VOCs were analyzed for the sample from MW-3 (near the waste oil tank), including naphthalene, and none were detected above reporting limits.

Previous Environmental Activities at Site

In **1983**, three single wall fiberglass gasoline underground storage tanks (UST; 12,000 gallon, 10,000 gallon, and 6,000 gallon), **one waste oil UST**, and single wall fiberglass product piping were installed at the Site. The **waste oil UST was replaced in 1987** by Mobil Oil Corporation (Mobil) with a **1,000 gallon** capacity double wall fiberglass UST.

In 2009, ConocoPhillips sold the station to United Brothers Enterprise, Inc. (UBE), who subsequently replaced the 6,000 gallon gasoline tank with a **6,000 gallon steel diesel tank** in the same year.

During the third quarter 2011 routine monitoring and sampling event, 0.06 feet of light non-aqueous phase liquid (LNAPL) was measured in well RW-1. Since no LNAPL had previously been reported in this well historically, the source of this LNAPL was not clear. In August 2011, Broadbent & Associates, Inc. collected fuel fingerprint samples of LNAPL from well RW-1, and from the gasoline dispensers for the low, mid, and high range octane unleaded gasoline in order to determine the source of the LNAPL. Samples were not collected from the diesel dispenser. The four samples were submitted to Torkelson Geochemistry, Inc. to be analyzed by capillary gas chromatography analysis. Based on the analytical results of the hydrocarbon fingerprint analysis, the chromatogram of the free product in RW-1 had some of the characteristics of a middle distillate either diesel fuel or fuel oil. Although the RW-1 chromatogram is not typical of diesel or fuel oil chromatograms, it does not rule out the possibility that RW-1 is some unique formulation of diesel fuel or fuel oil. Based on these results, the free product in RW-1 cannot be identified and does not appear to be a fuel product from former operations at the Site.

September 6, 2013

One 1,000-gallon waste oil underground storage tank (UST) was removed from the subject site. Two soil samples were collected beneath the UST, and one stockpile and one grab groundwater sample were also collected. Concentrations up to 30.9 mg/ kg TPHd and 213 mg/ kg TPHmo were detected in soil, and concentrations up to 18,200 micrograms per liter ($\mu\text{g/l}$) TPHd and 46,200 $\mu\text{g/l}$ TPHmo were detected in groundwater.

SANBORN FIRE INSURANCE MAPS REVIEW

The Sanborn Map Company produced a series of large-scale maps, dating from 1867 to the present and depicting the commercial, industrial, and residential sections of some twelve thousand cities and towns in North America. The maps show significant detail regarding dwellings, commercial buildings, and factories. Where available, Sanborn maps are a valuable source of information about past land uses. Sanborn maps were originally created in the late 1800s and early 1900s for assessing fire insurance liability in urbanized areas of the United States. These maps include detailed town and building information.

Fire insurance maps that include the subject property were requested from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. ALFA reviewed Sanborn Fire insurance maps obtained from EDR's collection on April 25, 2014 - copy attached.

In 1897, a chinese laundry existed on site at #1720 in its southern portion (see attached Sanborn map). The street was labeled "Seventh formerly Webster" and a dwelling existed at #1722. Vacant land existed to the east and across Buena Vista Avenue to the north. Vacant land and a few dwellings existed to the northwest, west, and south.

In 1948 and 1950 two gasoline stations were observed. The subject property gasoline station is located in the southeastern corner of the intersection of Webster St. and Buena Vista Ave. at #1720 Webster St.

The following labels noted on site on this map: "GAS & OIL"-gasoline and oil in the northwestern portion of the site, "GR & CONC"-gravel and concrete northwest of the building, a building labeled "GREAS'G" and "NO CH."-no chimney. Two USTs observed north and west of the building, respectively. The site addresses are #1720 Webster Street and #704 Buena Vista Avenue.

A smaller UST oriented approximately northwest-southeast labeled "WO"-waste oil is located in the southeastern portion of the subject property.

According to the Sanborn Fire Insurance Map, in 1948 and 1950 a gasoline station labeled "GREAS'G"-greasing and "GAS & OIL" - gasoline and oil was located at the adjacent site to the north across Buena Vista Avenue (#1802 Webster St.). Two USTs existed next to the site building.

Apartments and dwellings existed at adjacent sites to the northeast, east, and south and commercial buildings including some areas labeled auto repair/paint spraying, auto body shop, and used cars at the adjacent site to the southwest across Webster St. and an area labeled Welding and Auto Painting noted far to the west at #650 Buena Vista Ave.

In 1987, the shape of the USTs and structures on site has changed; two iron USTs are drawn as two circles in the northwestern portion of the site and a rectangle structure is drawn east of the USTs. No area is labeled as waste oil on this map.

The shape of the structure and UST locations at the fuel station (labeled "filling station") at #1802 Webster St., the adjacent site to the north, across Webster St. has changed. An area across Webster St. to the west is labeled "Used Cars".

LOCAL CITY DIRECTORIES REVIEW

City directories have been produced for most urban and some rural areas since the late 1800s. The directories are generally not comprehensive and may contain gaps in time periods. ALFA reviewed historical city directories obtained from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. on April 25, 2014 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following tables:

City Directory Search for 1716 Webster Street, Alameda (Subject Property)

Year(s)	Occupant Listed
2013	Webster 76
2006, 2008	Union 76, Alameda Smog Test Only Center,
1992, 1996, 2000	Webster BP
1991	Webster BP Oil (#1716)
1986	Westgate Mobil Auto Service Center
1962	Carson Mobil Service
1943	Randall Beverly Margt Gas Station (#1728)
1939, 1941	Morine Harold Gas Station
1937	General Petroleum Corp.
1933, 1934	Jackson Wm ptrnmkr
1933	Chovin Marcel Auto Parking (#1720)
1928, 1930	A D & A F Coker Garage David Blanche elev. o pr. (#1720)
1924, 1925	Sunset Garage (AD & A F Coker)
1923	Sunset Fuel & Feed Co. (John Ferretta), Fertilizer , Fuel & Feed
1922	Flindt Harry, Fuel Feed and Express Country Hauling
1920	Wood L JR (#1720) Harry F (#1716)
1915	Scott & Lally, garage
1911	Sullivan Katherine, nurse Regan Mary, nurse Morgersen Henry, vet. surgeon
1909, 1910, 1911	Quong Chong, laundry(#1720)
1907	Henderson Harry, contractor
1884	East side Webster: Gooby Edwin, real estate, Jaquith Annie, dressmaker SW corner Webster & Buenavista: Seib Barbara Webster & Buenavista (W-S): Benn Ferdinand, carpenter Webster & Buenavista (W-S): Scully Daniel, house painter

In 1909-1911 a chinese laundry listed at #1720 Webster St.

In 1915-1933, a garage, fuel station, repair, and auto parking existed on site.

Since 1937, the subject property is listed as fuel station as follows: General Petroleum Corp. (1937), Morine Harold Gas Station (1939, 1941), Randall Beverly Margt Gas Station (#1728), Carson Mobil

Service (1962), Westgate Mobil Auto Service Center (1986), Webster BP Oil (1991-2000), Union 76 (2006-2008), Webster 76 (2013).

In 1943, "Gibson Wm W Jessie, Gas Station located" at #1801 Webster St. is listed at the adjacent site northwest of the intersection Webster St. / Buena Vista Ave.

Since 1933, the adjacent property to the north across Buena Vista Avenue located at #1802 Buena Vista Ave. is listed as a fuel station as follows: Standard Station (1933-1935), Station Inc., gas station (1939), Chevron Station (1975-2008)

In 1955, "B & L Cleaners" is listed at the adjacent site to the northwest across the intersection Webster St. / Buena Vista Ave. at #653 Buena Vista Ave.

CONCLUSIONS

The following environmental conditions were identified at the subject Property and in the immediate surrounding areas implying the use of gasoline, diesel, engine oils, waste oil storage, volatile organics, other hazardous materials, etc.:

A "chinese laundry" existed on site between approximately 1897-1911

A garage, fuel station, repair, and auto parking existed on site between approximately 1915-1933.

A fuel station existed at the adjacent site to the north 1802 Webster St. since approximately 1933.

A gasoline station was located in 1943 at #1801 Webster St., the adjacent site to the northwest.

In 1955, "B & L Cleaners" is listed at #653 Buena Vista Ave (adjacent).

Since approximately 1937 the subject Property was fuel station. The subject Property structures, UST locations and number have changed at least four times within the last 77 years.

During these 77 years, the gasoline and/or diesel USTs have been located in the central-western and north-northwestern portions of the subject Property and the Waste Oil USTs have been located at different locations in the southeastern corner of the subject Property.

Based on the 1948 and 1950 Sanborn Fire Insurance Maps and City Directories discussed above, the first Waste Oil UST was installed in the late-1930's south of the building. According to LOP, the 550-gallon waste oil tank (apparently the waste oil UST installed in the late-1930's) was removed from the site. The removal date is unknown.

The other three Waste Oil USTs at this site have been installed and removed and replaced in 1983, 1987, 1990, and finally removed in 2013. These other three Waste Oil USTs have been located approximately at same location in the area of the last Waste Oil UST removed in 2013.

The old 550-gallon WOT was located in the central-southern portion of the site (see 1948 and 1950 Sanborn Maps) and the other three WOT have been located at another approximate location east-southeast of the site building.

TOG, TPH-D and HVO was Not Detected in a soil sample collected in 1992 from MW-3 next to an "underground waste oil tank"

Currently, the USTs are cathodically protected steel, double-walled underground storage tanks (UST). The USTs are equipped with electronic leak detection, overfill and spill prevention devices. The piping is monitored via electronic leak According to reports on the tightness testing provided (attached) there has been no indication of a release from the current tank system.

In an e-mail dated June 22, 2012, Mr. Dilan Roe of ACHCSA evaluated the analytical results of the free product from the recovery well RW-1 and one sample each from the low, mid, and high octane unleaded gasoline dispensers. "The chromatogram of the free product in well RW-1 has some of the characteristics of a middle distillate either diesel fuel or fuel oil, and stated that although the RW-1 chromatogram is not typical of diesel or fuel oil chromatograms seen, it does not rule out the possibility that RW-1 is some unique formulation of diesel fuel or fuel oil."

In 2009, ConocoPhillips sold the station to United Brothers Enterprise, Inc. (UBE), who subsequently replaced the 6,000 gallon gasoline tank with a **6,000 gallon steel diesel tank** in the same year.

During the third quarter 2011 routine monitoring and sampling event, 0.06 feet of light non-aqueous phase liquid (LNAPL) was measured in well RW-1. In August 2011, a fuel fingerprint samples of LNAPL was collected from well RW-1, and from the gasoline dispensers. Based on

the analytical results, RW-1 had some of the characteristics of a middle distillate either diesel fuel or fuel oil. Based on these results, "the free product in RW-1 cannot be identified and does not appear to be a fuel product from former operations at the Site".

One 1,000-gallon waste oil underground storage tank (UST) was removed on September 6, 2013 from the subject site. Concentrations up to 30.9 mg/ kg TPHd and 213 mg/ kg TPHmo were detected in soil, and concentrations up to 18,200 micrograms per liter ($\mu\text{g/l}$) TPHd and 46,200 $\mu\text{g/l}$ TPHmo were detected in groundwater.

Based on historical data presented above, City Directories dating back to 1884, Sanborn Fire Insurance Maps dating back to 1897, and a thorough review of all environmental documents dating back to 1990, the following conclusion are presented below:

1. Off-site sources such as car repair shops, a laundry, paint shops, a gas station existed in the last approximately 80 years in the immediate surrounding areas. Based on type of soils, (sand and silty sand) in the area, groundwater flow direction and gradient, and an assumed high permeability and conductivity, we evaluate the potential of impact of contaminants from off-site sources to be high.

2. On-site sources of contaminants consist of gasoline, diesel, engine oil, and waste oil from the USTs which existed on site in the last approximately 77 years and engine oil, gasoline, and VOCs compounds used at repair shops. As mentioned above, sand and silty sand exist in the subject Property area, high permeability and conductivity soils exist on-site. groundwater flow direction is north-northwest to north-northeast and the gradient average is 0.005 ft/ft.; however, the groundwater flow direction is likely affected by numerous excavations done when USTs were removed/replaced. It is common in California, multiple environmental cases, open and/or closed, be listed under same address in the SWRCB's Geotracker, DTSC's EnviroStor, and Cal EPA's Envirofacts databases. Therefore, we concur with Broadbent request for Low-Threat Risk UST Case Closure request and believe the environmental case regarding the gasoline impacted groundwater should be closed.

3. The gasoline UST was converted to a diesel UST in 2009. After two years, in 2011, free product, a light non-aqueous phase liquid (LNAPL) was measured in well RW-1. Based on the analytical results, RW-1 had some of the characteristics of a middle distillate either diesel fuel or fuel oil. Based on these results, "the free product in RW-1 cannot be identified and does not appear to be a fuel product from former operations at the Site".

It is unusual to detect suddenly free product in RW-1, a well monitored for years. As mentioned above, "the free product in RW-1 does not appear to be a fuel product from former operations at the Site" It is our professional opinion, the source of this free product contamination is unknown and the source is not likely the diesel UST installed two years prior to free product detection.

4. One 1,000-gallon waste oil underground storage tank (UST) was removed on September 6, 2013 from the subject site. Concentrations up to 30.9 mg/ kg TPHd and 213 mg/ kg TPHmo were detected in soil, and concentrations up to 18,200 micrograms per liter ($\mu\text{g/l}$) TPHd and 46,200 $\mu\text{g/l}$ TPHmo were detected in groundwater. No holes were noted in the waste oil UST.

As mentioned above, in the last 77 years waste oil USTs have been located at different locations in the southeastern corner of the subject Property. A repair shop and hoists also existed next to the waste oil UST area. The removal of the 550-gallon waste oil UST which existed (or still exists) approximately 20 ft west of the 2013 removed waste oil UST is not documented. Therefore, the possible source of TPHd and TPHmo contamination detected in 2013 could be from any of these locations.

RECOMMENDATIONS

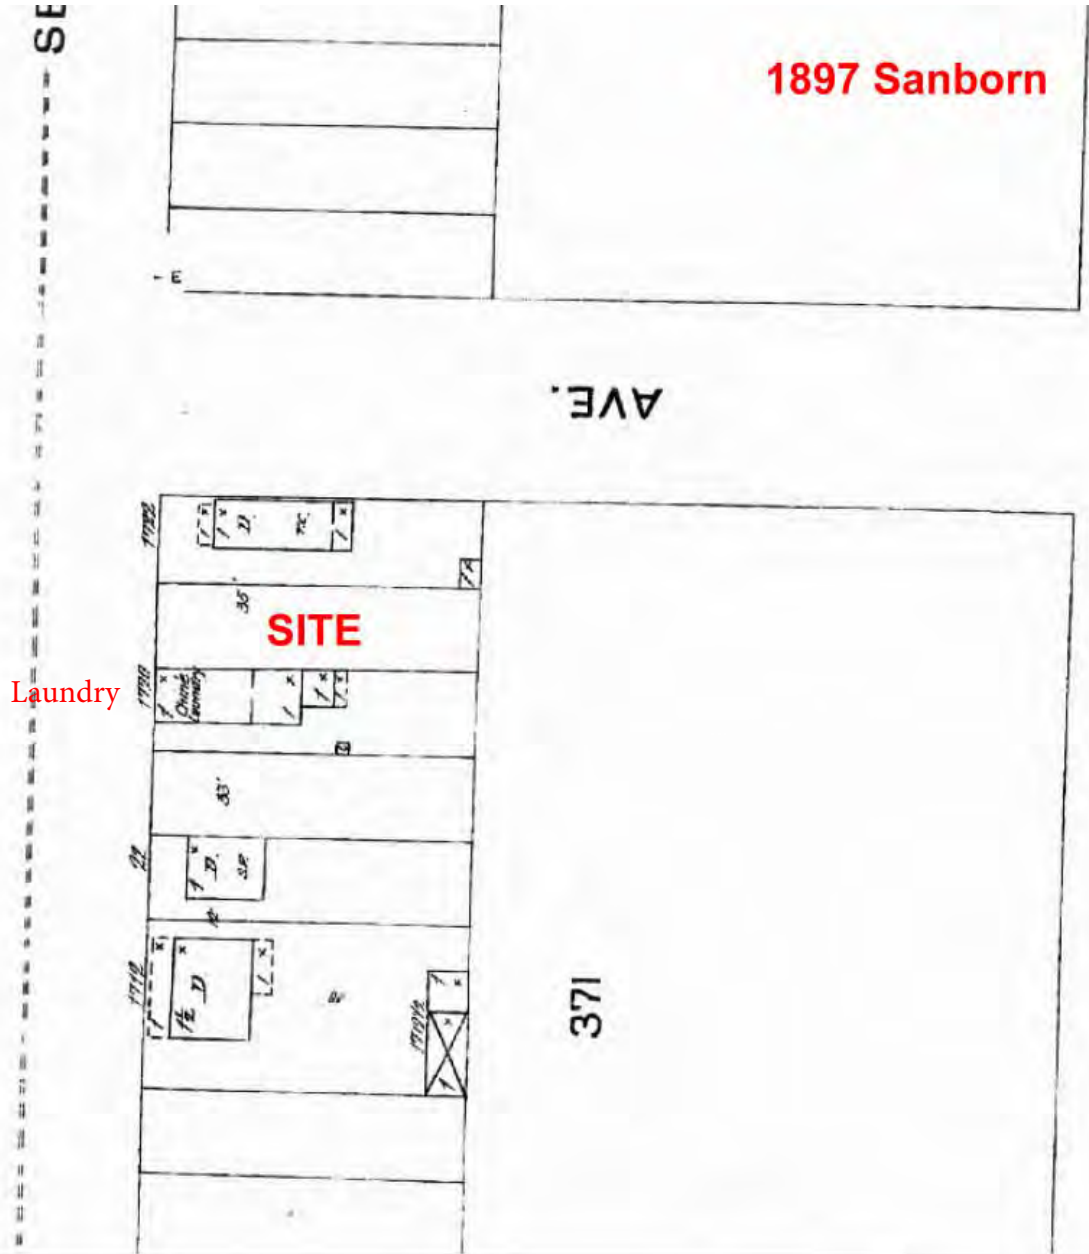

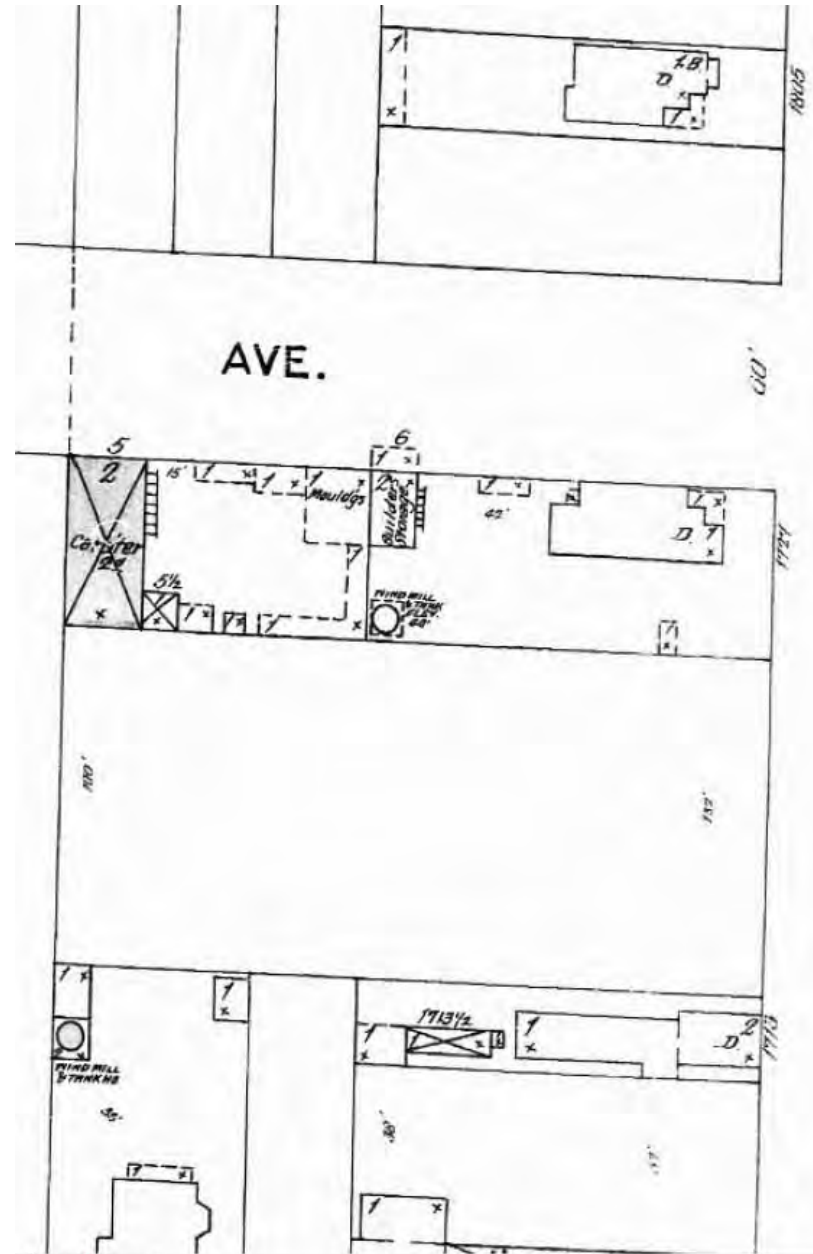

On March 25, 2014 in a letter titled "Notice of Responsibility, Fuel Leak Case No. R00000281 and GeoTracker Global ID T0600101651 , 1716 Webster Street, Alameda, CA 94501" the current property operator Delong Liu of Delong Oil, Inc. was named "Responsible Party"

Delong Oil, Inc. purchased the subject Property in 2009. In 2013, part of the property development, Delong Oil voluntarily paid for an 1,000-gallon waste oil UST removal. As documented throughout this Report, historically, potential off-site and on-site sources of contamination existed well before Property's acquisition.

Delong Oil name should be removed from the "Responsible Parties" list.
