**Re: Former Chevron Service Station # 9-4816
301 14th Street
Oakland, California**

Dear Ms. Evans:

Enclosed is a copy of the Supplemental Monitoring February 1998 report, prepared by our consultant Blaine Tech Services, Inc. for the above noted site. This report is being submitted in response to the requirements of the Residual Management Plan (RMP) which has been approved for this site.

As noted in the RMP, if the average concentration of the onsite wells C-1, C-2, C-3 and CR-1 exceed the SSTL (2600 ppb-benzene) during any sampling event, your office should be notified within 30 days of the event and the wells re-sampled within 15 days of the sampling event.

As noted in the Fourth Quarter Groundwater Monitoring Report for 1997, dated February 11, 1998 the average concentration of benzene was exceeded in the above noted wells and they were re-sampled as required in the RMP.

The wells were analyzed for the TPH-g, BTEX and MtBE constituents. In this supplemental sampling event, monitoring well C-2 was below method detection limits for the BTEX and MtBE constituents, while well C-1 was below method detection limits for the TE and MtBE constituents. The benzene constituent declined in wells C-3 and CR-1 from the 4th quarter sampling event. The average concentration of benzene in the four wells is 264.87 ppb, which is significantly below the 2,600-ppb threshold limit noted in the (RMP).

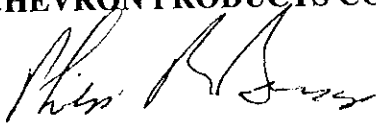

It appears that the increase in the average concentration of benzene in the fourth quarter (3052.5-ppb) may have been an anomaly, as the average concentration of benzene in the second quarter of 1997 was 591.7-ppb.

June 27, 1998
Ms. Pam Evans
Former Chevron Service Station #9-4816
Page 2

Chevron's consultant did not include a copy of the site map for reference, therefore, I have included a copy of the fourth quarter site map that you can use for reference of the wells. The groundwater elevation and direction of flow shown does not apply to this sampling event.

If you have any questions or comments, call me at (510) 842-9136.

Sincerely,
CHEVRON PRODUCTS COMPANY

Philip R. Briggs

Monitoring Performed on February 16, 1998

Groundwater Sampling Report 980216-D-1

This report covers the routine monitoring of groundwater wells at this Chevron facility. Blaine Tech Services, Inc.'s work at the site includes inspection, gauging, evacuation, purgewater containment, sample collection and sample handling in accordance with standard procedures that conform to Regional Water Quality Control Board requirements.

Routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated volume of a three-case volume purge, elapsed evacuation time, total volume of water removed, and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater is, likewise, collected and transported to McKittrick Waste Treatment Site for disposal.

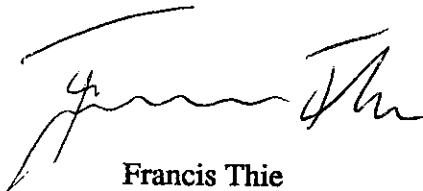

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL DATA AND ANALYTICAL RESULTS**. The full analytical report for the most recent samples is located in the **Analytical Appendix**.

At a minimum, Blaine Tech Services, Inc. field personnel are certified upon completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Yours truly,

Control Limits					

Please Note:

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.

Peggy Fenner
Project Manager

Please Note:

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.
