Jim,

I have no objection to use of the alternative product for a vapor barrier.

Subject: finishing the 1125 Miller Ave., Oakland Vapor Barrier

Jerry,

Clearwater is planning on completing the vapor sealant on the new concrete surface in the dispenser area (closet) at the 1125 Miller Ave., Oakland, California project.

I reread the workplan, and given cost and availability, I propose changing the "Retro-Coat" brand for a less costly "Aquafin Vaportight Coat" SG2. According to the manufacturer, the Aquifin product is a 2-component coating designed to create a vapor and water barrier to volatile contaminants. Given the lower costs of implementing the installation of this product, I request using the Aquifin product instead of the originally specified "Retro-Coat" named product. If you are in agreement, please confirm, and we will complete the installation of the vapor barrier.

Regards,

James A. Jacobs, P.G., C.H.G.
