Re: Dublin Auto Wash

7240 Dublin Boulevard Dublin, California ACHCSA Case No. 304

Dear Mr.Chan:

I, Mr. Hooshang Hadjian, have retained Pangea Environmental Services, Inc. (Pangea) as the environmental consultant for the project referenced above. Pangea is submitting the attached report on my behalf.

I declare, under penalty of perjury, that the information and/or recommendations contained in the attached report is true and correct to the best of my knowledge.

Sincerely,

Hooshang Hadjian

Thistym

Mr. Kapil Mohan Dublin San Ramon Services District Regional Wastewater Treatment Facility 7399 Johnson Drive Pleasanton, CA 94588

Re: Monthly Discharge Compliance Report – October 2010 Groundwater Remediation, 7240 Dublin Blvd, Dublin, California

Dear Mr. Mohan:

Pangea Environmental Services, Inc. (Pangea) has prepared this *Monthly Discharge Compliance Report – October 2010* for the subject site for the period of September 21 to October 27, 2010. As specified in the Industrial Wastewater Discharge Permit #10010 issued January 28, 2010, initial monthly discharge compliance reports are required by the Dublin San Ramon Services District (DSRSD). This report presents the monthly test results -- no regulated substances (petroleum hydrocarbons) were detected in the system effluent compliance point. Described below are background information, system operation and performance, system sampling, and future activities.

BACKGROUND INFORMATION

DPE system installation was required and approved by the Alameda County Environmental Health (ACEH) to cleanup residual petroleum hydrocarbons from a prior unauthorized release. The DPE system consists of an aboveground vacuum pump to simultaneously extract soil vapor and groundwater. The groundwater treatment equipment consists of a 120-gallon vapor/liquid separator (knockout tank), transfer pump, particulate filter vessel, two 1,000-lb activated carbon vessels connected in series, and a water totalizer meter. Once the transfer tank becomes full, the transfer pump is activated by level control switches in the transfer tank and pumps the groundwater through the water treatment system prior to discharge to the sanitary sewer under permit from the DSRSD.

SYSTEM OPERATION AND PERFORMANCE

The DPE system commenced continuous operation on Monday, September 20, 2010. As of the end of this reporting period (October 27, 2010), the DPE system extracted and treated approximately 22,889 gallons of groundwater. The groundwater flow rate has ranged from approximately 0.62 to 2.27 gpm, which includes any system shutdown periods. GWE system performance is summarized in Table 1.

Discharge Compliance Report 7240 Dublin Blvd Dublin, CA November 4, 2010

SYSTEM SAMPLING

During this reporting period, samples were collected from the influent, midpoint and effluent (permit location IWD-001) of the groundwater treatment portion of the DPE system on October 14, 2010. The system operated for approximately 29 days of the 37 day reporting period. System flow data and groundwater analytical results are summarized on Table 1. Based on laboratory analytical results, the DPE system was operating in compliance with discharge permit conditions: no regulated substances (petroleum hydrocarbons) were detected in the system midpoint or effluent (permit location IWD-001). The laboratory analytical report is included in Appendix A.

PLANNED FUTURE ACTIVITIES

Current plans include DPE system operation for a total of a couple months.

CLOSING

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

If you have any questions, please email <u>briddell@pangeaenv.com</u> or call me at (510) 435-8664.

Sincerely,

Pangea Environmental Services, Inc.

Suddelf

Bob Clark-Riddell

ABBREVIATIONS AND NOTES:

Benzene analyzed by EPA Method 8021B

MTBE = Methyl tertiary butyl ether analyzed by EPA Method 8021 Cm

^{1 =} Initial totalizer reading was 9,997,126 (or -2,874 gallons). After reaching 9,999,999 the meter returns to 0,000,000. Therefore, shown reading above 0 is actual reading plus 2,874. The 9/21/10 reading of 9,998,851 less 9,997,126 equals 1,725 gallons discharged. gpm = Gallons per minute

TPHd = Total Petroleum Hydrocarbon as Diesel analyzed by EPA Method 8015B with silica gel cleanup

TPHg = Total Petroleum Hydrocarbon as Gasoline analyzed by EPA Method 8015B

^{-- =} not measured/not available

^{*} Estimated contaminant mass calculated by multiplying average concentration detected during period (Table 1) by volume of extracted groundwater. Uses most recent lab data.

D		•		
Dear	- 1 1	ın	а	•

Enclosed within are:

- 1) The results of the 5 analyzed samples from your project: #7240 Dublin Blvd,
- 2) A QC report for the above samples,
- 3) A copy of the chain of custody, and
- 4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius Laboratory Manager

McCampbell Analytical, Inc.

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

£ TPH(btex) = sum of BTEX areas from the FID.

cluttered chromatogram; sample peak coelutes with surrogate peak.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.
