lft msg, rcvd paper copy of 11/15/07 QMR, not acceptable submittal
needs signed, stamped version W/Rp cover ltr submitted electronicall to ftp site

8400 Pardee,

11/26/07, 328p, Ben Black, Arcadis BBL, 770-428-9009 x19
QQMR for UPS Oakland hub, clarification as to what I am looking for.
stamped original cover pages, copy understand, doenst know what to do about e-submittal.

12/03/07, 10a, he will upload this & future reports to ftp site w/cover ltr from RP

7/3/97 Mtg w/ B. Scheibach + L. Lyons

agreed to:

provide a map to attempt to delineate soil
+ GW contamination in North area

• will propose w/ ^{the} additional borings the addition
of ORC.

will monitor semi-annual for at least
2 spring events (1 yr).

#583

Request chromatograms for samples from well
up gradient geopoles to verify fill contamination
Are PNA's - detected in prior grab sw samples
of concern? compare vs commercial PRG's.
Assume gw is not potable. - Compared to Water Board's
RBSL's & not a problem.

Propose trenches (to 6' depth) around tank pit +
recovery sumps at end of troughs. The pads/
booms installed in sumps / manual bailing or skimmer
How about regular pumping from the sump? ~~total~~
fluids
How about adding bio-remediation agents (nutrient/
microbes/surfactants) into trench
will propose semi annual monitoring

will get cost
estimate

Closure: should see no further F.P./sheen - +
verify dissolved TPH_d < 5000 ppb. (?) per RWQCB
(RBSL's, (at least 2 consecutive samplings).
Soils (subsurface) recommended cleanup level = 1000/2500ppm
Frequency of monitoring?

Hugh Devery: (770)-933-5378

and surface water aquatic protection not an issue / add
Conduct study.

- Down gradient gw not significantly impacted TW 6 + 7

6/2/97

Spoke w/ G. Stivala of BBC.

Confirmed that the 6/97 sampling @
UPS should be for TPHd only on MWs 1-3
+ Method 8100 (PAHs) on MW-2.

As far as the upgradient "backfill" Contamination
probably will address with a deed notice.

7/8/93

Conversation w/ J. Pomeroy

have taken 1 under the line @ $\sim 2\frac{1}{2}'$
(near tank pit) also found apparent contamination under
remote full part from over fill (spillage)
- encountered several unmarked utilities
which will prevent the excavation & removal of
the line.

- I requested hand boring under full
part & soil splng @ $\sim 2\frac{1}{2}'$ & 5'
plus ~~the~~ 2 soil bores to either side of
the part (at 5') & soil splng @ $2\frac{1}{2}'$ & 5'

x = splng @ $2\frac{1}{2}'$

o = full part contamination

• = proposed new borings

to determine lateral extent
