Subject: Fourth Quarter 2008 Groundwater Monitoring Report
Former Lemoine Sausage Factory
630 29th Avenue
Oakland, California

Dear Mr. Wickham:

Bureau Veritas North America, Inc. (Bureau Veritas) is pleased to present the results of the Fourth Quarter 2008 groundwater monitoring event performed at the Former Lemoine Sausage Factory, located at 630 29th Avenue in Oakland, California.

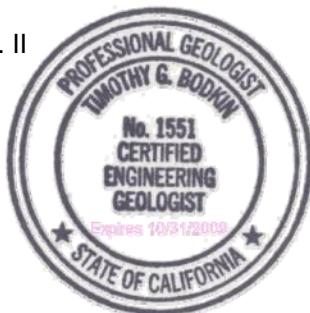

We declare, under penalty of perjury, that the information and/or recommendations contained in this attached report are true and correct to the best of our knowledge and belief. If you have any comments or questions regarding this report, please do not hesitate to contact Timothy Bodkin at (925) 426-2626.

Sincerely,

Alyssa C. Abegg
Environmental Consultant

1.0 INTRODUCTION

Bureau Veritas North America, Inc. (Bureau Veritas) has prepared the following Fourth Quarter 2008 Groundwater Monitoring Report for the former Lemoine Sausage Factory (the "Site"). The Site is located at 630 29th Avenue near its intersection with 7th Street in Oakland, California (Figure 1). Groundwater monitoring is being performed at the Site on a quarterly basis in accordance with an Alameda County Environmental Health (ACEH) directive dated June 19, 1999. Groundwater monitoring has been required due to a past release from an underground gasoline underground storage tank (UST).

The purpose of the groundwater monitoring is to document groundwater flow conditions and water quality beneath the Site. Depth to groundwater measurements were obtained and groundwater samples were collected and analyzed for total petroleum hydrocarbons as gasoline (TPH-g) and associated compounds, including benzene, toluene, ethylbenzene and total xylenes (BTEX), and volatile organic compounds (VOCs).

2.0 SITE DESCRIPTION AND HISTORY

A single 1,000-gallon gasoline UST and associated plumbing/piping were formerly located beneath the sidewalk along 7th Street immediately east of the subject building. The fuel dispenser for the UST was located in a "cubby hole" near the building's roll-up door. The UST, fuel dispenser, and associated piping were removed on November 21, 1996. Confirmation soil samples were collected from the excavation for laboratory analyses. A petroleum hydrocarbon sheen was noted on the groundwater surface within the tank excavation. Analytical results for the confirmation samples showed the presence of petroleum hydrocarbons.

Subsequent groundwater investigations were performed to define the vertical and lateral extent of petroleum hydrocarbons in groundwater and to monitor groundwater conditions around the Site. Several monitoring wells were installed and screened within the first-encountered water bearing zone, which predominantly occurs within low permeability clayey and sandy silts. High concentrations of TPH-g and benzene historically have been detected in the immediate vicinity or just downgradient of the former UST. VOCs also have been detected in monitoring wells located to the south and southwest of the former UST location and are believed to originate from an off-site source.

3.0 FIELD ACTIVITIES

Groundwater level measurements and samples were obtained from ten (10) existing monitoring wells (MW-1, MW-2, and MW-6 through MW-13).

3.1 GROUNDWATER LEVEL MEASUREMENTS

On December 2, 2008, depth to water measurements were obtained in the monitoring wells to calculate groundwater elevations and to estimate the groundwater flow direction and gradient. The wells were opened and allowed to stabilize prior to measuring the groundwater levels. The depth to water in each well was measured using an electronic well sounder. Groundwater depths were measured from a surveyed reference

elevation point represented by a V-notch at the top of each casing. Groundwater elevations were calculated by subtracting the measured depth to water from the top of casing elevation at each monitoring well.

3.2 GROUNDWATER PURGING

Prior to groundwater sample collection at each monitoring well, approximately three (3) well casing volumes of standing water were removed, with the exception of Wells MW-1 and MW-2 which were not purged due to insufficient amounts of water within the wells and poor groundwater recharge noted during purging. In addition, Wells MW-9 and MW-10 were purged dry during the purging events. Wells MW-6 through MW-13 were purged by hand bailing with new 1-liter plastic disposable bailers.

The purge volume from each monitoring well was determined by multiplying the nominal cross-sectional area of the well casing by the water column within each well casing. The water column height in each well was determined by subtracting the depth to water from the total well casing depth. Water quality parameters (pH, specific conductivity, temperature, and turbidity) were measured and recorded onto Field Sampling Data Sheets. Water quality parameter measurements were taken prior to purging and after removing each well casing volume of water from each monitoring well.

Groundwater purged from monitoring wells was stored onsite in sealed 55-gallon drums and labeled with the project-identifying information. Groundwater level measurements for the Fourth Quarter 2008 monitoring event were recorded on Field Sampling Data Sheets, as presented in Appendix A.

3.3 GROUNDWATER SAMPLING

Before groundwater sampling commenced, each purged monitoring well was allowed to recharge to at least 80% of the pre-purged standing water volume, except for Wells MW-1 and MW-2 for the reasons stated above. Groundwater samples for laboratory analyses were retrieved using either a peristaltic pump equipped with polytubing or a new disposable bailer. Groundwater samples were poured into appropriate laboratory-supplied containers. Sample containers were sealed, labeled with identifying project information, logged onto a chain-of-custody document, and temporarily stored in a chilled ice chest containing crushed ice for transport to the laboratory.

3.4 LABORATORY ANALYSES

Groundwater samples were analyzed by Curtis and Tompkins Ltd. of Berkeley, California, a State of California-certified laboratory. The samples were analyzed by the following United States Environmental Protection Agency (USEPA) approved analytical methods:

- USEPA Method 8021B for TPH-g/BTEX
- USEPA Method 8260B for VOCs

Certified analytical data sheets and chain-of-custody documentation for the Third Quarter 2008 groundwater sampling event are presented in Appendix B.

4.0 FINDINGS

4.1 GROUNDWATER FLOW CONDITIONS

Groundwater flow conditions were assessed based upon the groundwater level measurements obtained in the wells. Groundwater depths ranged between 6.17 and 11.13 feet below the tops of well casings. Groundwater elevations ranged between 6.66 and 10.70 feet above mean sea level. Groundwater flow is to the southwest at an estimated gradient of 0.016 feet per foot (ft/ft), as measured between Wells MW-10 and MW-13. Depth to water measurements and groundwater elevation data from this event and previous events are presented in Table 1. The Fourth Quarter 2008 groundwater elevation map is presented on Figure 2.

4.2 ANALYTICAL RESULTS

Analytical results for groundwater showed the presence of petroleum hydrocarbons and VOCs. The frequency and range of petroleum hydrocarbons and VOCs detected in groundwater during this quarter are as follows:

- TPH-g was detected in Wells MW-1, MW-2, MW-8, MW-9, MW-12, and MW-13 at concentrations ranging between 65 and 20,000 micrograms per liter ($\mu\text{g/L}$).
- Benzene was detected in Wells MW-1, MW-2, MW-8, MW-9, MW-12, and MW-13 at concentrations ranging between 0.53 and 8,400 $\mu\text{g/L}$. This is the first detection of benzene in Well MW-10 since First Quarter 2002 monitoring event.
- Toluene was detected in Wells MW-1, MW-2, MW-8 and MW-9 at concentrations ranging between 1.5 and 220 $\mu\text{g/L}$.
- Ethylbenzene was detected in Wells MW-1, MW-2, MW-8, MW-9, and MW-13 at concentrations ranging between 27 and 1,000 $\mu\text{g/L}$.
- Total xylenes were detected in Wells MW-1, MW-2, MW-8, MW-9, and MW-13 at concentrations ranging between 2.8 and 610 $\mu\text{g/L}$.
- Trichloroethene (TCE) was detected in Wells MW-12 and MW-13 at concentrations of 98 and 16 $\mu\text{g/L}$, respectively.
- 1,2-Dichloroethane (1,2-DCA) was detected in Well MW-6 for the first time since Second Quarter 2004 Monitoring Event at a concentration of 0.6 $\mu\text{g/L}$.
- Cis-1,2-dichloroethene (cis-1,2-DCE) was detected in Wells MW-8, MW-9, MW-12, and MW-13 at concentrations ranging between 12 and 830 $\mu\text{g/L}$.
- Trans-1,2-dichloroethene (trans-1,2-DCE) was detected in Wells MW-8, MW-12, and MW-13 at concentrations of 43, 58, and 63 $\mu\text{g/L}$, respectively.
- Vinyl chloride (VC) was detected in Wells MW-8 and MW-13 at concentrations of 200 and 5.8 $\mu\text{g/L}$, respectively.

Historical groundwater analytical results for petroleum hydrocarbons and VOCs detected in groundwater are presented in Table 2. TPH-g and benzene concentrations detected in groundwater and

isoconcentration contours for these constituents detected during Fourth Quarter 2008 are presented on Figures 3 and 4, respectively. TCE and cis-1,2-DCE concentrations detected in groundwater during Fourth Quarter 2008 are presented on Figure 5.

5.0 CONCLUSIONS

Groundwater conditions for this quarter are relatively consistent with the trends noted during previous monitoring events. TPH-g and BTEX concentrations detected in groundwater generally remained within the same order of magnitude as those analytical results from previous events. TPH-g concentrations decreased in all wells in which it was detected during this monitoring event. Benzene concentrations increased in Wells MW-1, MW-10, and MW-13 and decreased in Wells MW-2, MW-8, MW-9, and MW-12. The highest concentrations of TPH-g and benzene were detected in Wells MW-2 and MW-9, which are both located within the central portion of the warehouse building downgradient of the former UST location. The lateral extent of the hydrocarbon plume is roughly defined by the TPH concentrations detected in the outermost monitoring wells encompassing the Site.

VOC concentrations detected in Wells MW-8, MW-12, and MW-13 generally decreased in comparison to those concentrations detected during the previous event. The source of the VOCs in groundwater is unknown and appears to originate from an offsite area. VOC concentrations detected in groundwater are not related to the UST release. VOC degradation compounds including cis-1,2-DCE, trans-1,2-DCE, and vinyl chloride detected in groundwater over the past several monitoring events indicate that degradation of the TCE is occurring. No additional investigation of the TPH- and VOC-impacted groundwater is recommended at this time.

	9/9/2008	13.39	7.03	6.36
	12/2/2008	13.39	6.73	6.66

Notes:

1. Top of casing elevations are referenced to mean sea level (msl) and surveyed with reference to the benchmark located at Peterson Street and East 7th Street.
2. NM refers to Not Measured.
3. ft, msl refers to feet above mean sea level.

HISTORICAL GROUNDWATER ANALYTICAL RESULTS
FORMER LEMOINE SAUSAGE FACTORY
630 29TH AVENUE
OAKLAND, CALIFORNIA

Well Location	Date Sampled	TPH-g (ug/L)	Benzene (ug/L)	Toluene (ug/L)	Ethylbenzene (ug/L)	Total Xylenes (ug/L)	TCE (ug/L)	1,2-DCA (ug/L)	cis-1,2-DCE (ug/L)	trans-1,2-DCE (ug/L)	VC (ug/L)
MW-13	9/9/2008	4,300	29 C	<0.5	41	9.5 C	17	<0.5	52	<0.5	6.5
	12/2/2008	3,200	55 C	<0.5	27	13.2	16	<0.5	51	63	5.8
CDPH MCL		-	1	150	300	1,750	5	0.5	6	10	0.5

Notes:

1. Results are reported in micrograms per liter ($\mu\text{g}/\text{L}$).
2. NA refers to Not Analyzed.
3. TPH-g refers to Total Petroleum Hydrocarbons as Gasoline.
4. TCE refers to Trichloroethene.
5. trans-1,2-DCE refers to trans-1,2-dichloroethene.
6. cis-1,2-DCE refers to cis-1,2-dichloroethene.
7. VC refers to vinyl chloride.
8. 1,2-DCA refers to 1,2-dichloroethane.
9. Y = Sample exhibits chromatographic pattern which does not resemble standard.
10. Z = Sample exhibits unknown single peak or peaks.
11. C = Presence confirmed, but RPD between columns exceed 40%.
12. L = Lighter hydrocarbons contributed to the quantitation.
13. CDPH MCL refers to California Department of Public Health Maximum Contaminant Level.

APPENDIX A
FIELD SAMPLING DATA SHEETS

Groundwater Elevation Data
Former Lemoine Sausage Factory
630 29th Avenue
Alameda, California

Well Identification	Date Measured	Time Measured	Time Sampled	Top of Casing Elevation (ft,msl)	Initial Depth to Water (feet)	Sampling Depth to Water (feet)	Groundwater Elevation (ft,msl)
MW-1	12-2-08	830		16.69	6.17		10.52
MW-2	12-2-08	830		20.79	11.13	7	9.66
MW-6	12-2-08	826		16.6	6.36		10.24
MW-7	12-2-08	822		15.47	6.79		9.68
MW-8	12-2-08	840		17.58	8.29		9.29
MW-9	12-2-08	836		17.61	7.31		10.30
MW-10	12-2-08	833		16.92	6.22		10.70
MW-11	12-2-08	818		14.87	6.71		8.16
MW-12	12-2-08	815		14.05	6.59		7.46
MW-13	12-2-08	810		13.39	6.73		6.66

Notes:

1. Top of casing elevations are referenced to mean sea level (msl). The reference point is the benchmark

GROUNDWATER SAMPLING DATA SHEET

Project Name: Former Lemoine Sausage Factory		Well ID Number:	MW-1					
Project No.: 33104-004578.00		Sample ID Number:	MW-1					
Project Location: 630 29th Avenue, Oakland, CA		Date Gauged:	12/2/08					
Field Technician: A. Abeyss Jeremy Wilson		Date Purged:	-					
Weather Conditions: partly cloudy, 50's		Date Sampled:	12/2/08					
Top of Casing Elevation (ft, msl): 16.69		Casing Diameter (inches):	3/4 "					
Depth to Water Elevation (ft, btoc): 6.17		Wellhead Condition:	ok					
Groundwater Elevation (ft, msl): 10.52		Presence of Wellhead Gases:	N/A					
Depth to Well Bottom (ft, btoc): 7.69		Vapor Reading (ppm):	N/A					
Water Column Height (ft): 1.52		Presence of SPH:	N/A					
Calculated Purge Volume (gal): ~ 0.06		Thickness of SPH (ft):	N/A					
Actual Purge Volume (gal): 0		Comments:	-					
Gallons Per Foot: 1"=0.04, 2"=0.17, 3"=0.37, 4"=0.66, 6"=1.5, other=r2 x 0.163								

PURGING MEASUREMENTS

Time	Volume Removed (gal)	Specific Conductivity	Temp (°C)	Dissolved Oxygen (mg/L / %)	pH (units)	Turbidity (NTUs) or TDS g/L	ORP	Odor

Water Level Indicator Model & No.: Water level indicator	Purge Method: peristaltic pump
pH/Cond/Temp Meter Model: Hach U-22	Purge Equipment Used: "
Turbidity Meter Model: "	Purge Rate (gpm): N/A
Sample Collection Time: 11/5/08	Chemical Laboratory: Curtis and Tompkins
Sample Collection Method: peristaltic pump	Chemical Analysis: TPH-g/BTEX/VOCs
Sample Containers Used: Voas	
Other Field Observations: Color strong

CASE NARRATIVE

Laboratory number: **208242**
Client: **Bureau Veritas North America**
Project: **33104-004578.00**
Location: **Sausage Factory**
Request Date: **12/02/08**
Samples Received: **12/02/08**

This data package contains sample and QC results for eleven water samples, requested for the above referenced project on 12/02/08. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):

High surrogate recovery was observed for bromofluorobenzene (FID) in MW-13 (lab # 208242-010), due to interference from coeluting hydrocarbon peaks. High surrogate recovery was observed for bromofluorobenzene (PID) in MW-13 (lab # 208242-010); the corresponding trifluorotoluene (PID) surrogate recovery was within limits. MW-09 (lab # 208242-006) had pH greater than 2. This sample was analyzed within the seven day holding time for unpreserved samples. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

MW-09 (lab # 208242-006) had pH greater than 2. This sample was analyzed within the seven day holding time for unpreserved samples. No other analytical problems were encountered.
