Thank you! I will let you know once we have it re-scheduled, which should be for the first time we have 5 days after less than 1/2 inch rain.

Paul

Paul,

Since the proposed well locations are near the edge of the building, it does seem that we should be concerned about the soil moisture. If it was further in, it would probably be better, or at least there'd be some time before the moisture front came through. To avoid second guessing the data, you should probably hold off.

**Subject:** Rain and upcoming soil gas sampling at California Linen

Hi Mark,

We are currently scheduled to collect soil gas samples at California Linen this coming Thursday. All of the samples are indoors. Do you have any concerns for our sampling sub-slab and 5 feet below the slab of the building when there has been rain in the days preceding the sampling? Thank you!

Paul
