**Re: Former Chevron Service Station #9-1153
3126 Fernside Boulevard, Alameda, California**

Dear Ms. Shin:

Enclosed is the Third Quarter Groundwater Monitoring Report for 1997, that was prepared by our consultant Blaine Tech Services, Inc. for the above noted site. Samples were analyzed for TPH-g, BTEX and MtBE constituents.

Separate phase hydrocarbons (SPH) continues to be detected in monitoring well C-1 and 0.150 gallons was removed since the last quarterly event. This is a decrease of almost 1 ½ gallons from the previous report. Monitoring wells C-3, MW-4, MW-8, MW-9 and MW-10 were below method detection limits for all constituents. The benzene constituent decreased in wells MW-5 and MW-6 while increasing in well MW-7

Depth to the ground water varied from 4.04 feet to 5.39 feet below grade with a direction of flow southeasterly.

Separate phase hydrocarbons that accumulates in monitoring well C-1, is now scheduled for removal once a month. As you requested, the bio-indicator parameters of dissolved oxygen, oxidation-reduction potential, pH, alkalinity, ferrous iron, nitrate and sulfate were collected. The dissolved oxygen, oxidation-reduction potential and pH results will be found on the monitoring data sheets while the other parameter results will be in the analytical data sheets.

Now that we have a baseline for the bio-indicator parameters, it may be appropriate to install Oxygen Releasing Compounds (ORC's) into the three wells (C-1, MW-6, MW-7), that have constantly detected dissolved hydrocarbons. Injection of ORC's could only help to speed up the natural attenuation process. I would appreciate your comments on this suggestion.

Chevron will continue to monitor the wells quarterly as you have requested. If you have any questions or comments, call me at (510) 842-9136.

Sincerely,
CHEVRON PRODUCTS COMPANY

Philip R. Briggs
Site Assessment and Remediation Project Manager

3rd Quarter 1997 Monitoring at 9-1153

Third Quarter 1997 Groundwater Monitoring at
Chevron Service Station Number 9-1153
3126 Fernside Blvd.
Alameda, CA

Monitoring Performed on July 9, 1997

Groundwater Sampling Report 970709-X-1

This report covers the routine monitoring of groundwater wells at this Chevron facility. Blaine Tech Services, Inc.'s work at the site includes inspection, gauging, evacuation, purgewater containment, sample collection and sample handling in accordance with standard procedures that conform to Regional Water Quality Control Board requirements.

Routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated volume of a three-case volume purge, elapsed evacuation time, total volume of water removed, and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater is, likewise, collected and transported to McKittrick Waste Treatment Site for disposal.

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL DATA AND ANALYTICAL RESULTS**. The full analytical report for the most recent samples is located in the **Analytical Appendix**. The table

also contains new groundwater elevation calculations taken from the computer plotted gradient map which is located in the **Professional Engineering Appendix**.

At a minimum, Blaine Tech Services, Inc. field personnel are certified upon completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Yours truly,

SEQUOIA ANALYTICAL

Peggy Penner
Project Manager

Please Note:

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.

SEQUOIA ANALYTICAL

Peggy Fenner
Project Manager

Please Note:

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.
