Subject: # [REDACTED]

Site Address: 3519 Castro Valley Boulevard, Castro Valley, CA
Castro Valley Gasoline Service Station

Dear Ms. Chu:

Enclosed for your review is SOMA's "Tank Closure and Replacement Report" for the subject site.

Thank you for your time in reviewing our report. If you have any questions or comments, please call me at (925) 244-6600.

Sincerely,

Mansour Sepehr, Ph.D., PE
Principal Hydrogeologist

1.0 INTRODUCTION

This report has been prepared by SOMA Environmental Engineering, Inc. (SOMA) on behalf of Mr. Mirazim Shakoori, the property owner of 3519 Castro Valley Boulevard, Castro Valley, California (the "Site"). As shown in Figure 1, the Site is located at the southeast corner of Castro Valley Boulevard and Redwood Road. The Site is located in an area of commercial land use. As shown in Figure 2, the Site is bordered by Castro Valley Boulevard on the north, Redwood Road on the west, and commercial properties on the east and south.

There were four underground storage tanks (USTs) that were removed in September 2003. The four former USTs included a 10,000-gallon tank for storing regular unleaded gasoline, an 8,000-gallon tank for storing super unleaded, a 6,000-gallon tank for storing plus unleaded, of a 2,000-gallon tank for storing waste oil. This report documents the on-site remedial activities conducted during the removal and replacement of the on-site USTs in September 2003. During the USTS removal and upgrade period a [REDACTED] were removed and disposed of at Forward Landfill, Stockton, California.

1.1 Background

? In 1984, there were three single-walled fiberglass USTs with capacities of 6,000-gallons, 8,000-gallons, and 10,000-gallons installed in the southeastern portion of the Site. A former dispenser island reportedly existed on the west side of the Site; however, there was no available information on the date of the dispenser's removal.

In 1988, a 2,000-gallon double-walled fiberglass waste oil tank (WOT) was installed to replace the previous waste oil UST. In September 1988, Kaprealian Engineering, Inc. (KEI) removed the original 380-gallon WOT and observed holes in this UST. The soil samples collected from the bottom of the excavation, at 8.5

feet below ground surface (bgs), contained benzene at 6.8 micrograms per kilogram (ug/Kg or parts per billion) and toluene at 9.5 ug/Kg. The results of the laboratory analysis did not indicate the presence of total petroleum hydrocarbons (TPH) or total oil and grease (TOG) in the soil samples. In March 1989, an Unauthorized Release Report (URR) was submitted to Alameda County Health Care Services (ACHCS).

Prior to 1989, the subject site was a Mobil service station. In 1989, the subject property became the site of a British Petroleum (BP) station. In March 1994, the subject property was transferred to Mr. Mirazim Shakoori who operated the Site as a Chevron station.

Since 1992, quarterly monitoring has been conducted at the Site. Prior to SOMA, URS Corporation, Cambria Environmental Technology, Inc., Blaine Technical Services, Alisto Engineering (AE), and Environmental Science & Engineering, Inc. (ESE) conducted these monitoring and sampling events. Since 1995, off-site groundwater contamination has been documented with elevated Methyl tertiary Butyl Ether (MtBE) levels detected in off-site groundwater monitoring well MW-7. In 1999, the sampling schedule was modified to include semi-annual sampling of ESE-5 and MW-7 (see Figure 2 for their locations).

In 1993, ESE reportedly encountered petroleum hydrocarbon contaminants in all of the monitoring wells with the maximum groundwater concentrations detected in ESE-1, which is located west of and adjacent to the three USTs. This well contained total petroleum hydrocarbons as gasoline (TPH-g) at 2,300 ug/L, benzene at 370 ug/L, toluene at 160 ug/L, ethylbenzene at 17 ug/L, and xylenes at 110 ug/L. A URR for this documented release was submitted to ACHCS in March 1993.

In December 1994, ACC Environmental Consultants, Inc. (ACC) conducted an investigation along the western edge of the property before the commencement

of the Redwood Boulevard road-widening project. ACC drilled five boreholes to a maximum depth of 10 feet bgs. The maximum TPH-g and benzene, toluene, ethylbenzene, and total xylenes (collectively referred to as BTEX) soil concentrations detected in the road-widening boreholes was 59,000 ug/Kg TPH-g, 5,890 ug/Kg benzene, 220,000 ug/Kg ethylbenzene, and 540,000 ug/Kg xylenes.

In July 1995, AE installed three additional monitoring wells. AE installed two on-site wells, MW-6 and MW-8, and one off-site well, MW-7, on the adjacent property, southeast of the Site.

In February and March 1996, AE also advanced several hand-auger boreholes in the vicinity of the former western pump island and product lines. The boreholes were hand-augered to a maximum depth of 8.5 feet bgs. AE reported that petroleum hydrocarbon concentrations increased with depth and the highest concentration was encountered at the capillary fringe. It was concluded that a dissolved phase plume migrated from an upgradient source. Subsequently, in April 1996, AE decommissioned well MW-8, which was located on the western margin of the Site to accommodate the road-widening project along Redwood Boulevard.

Since 1996, groundwater monitoring programs have been conducted at the Site by various environmental consultant firms.

In May 2000, an apparently leaking shear valve was discovered in the southern dispenser island piping. A URR was submitted to the ACHCS. In a letter dated June 16, 2003, Eva Chu, of the ACHCS, required an additional investigation be performed to delineate the horizontal and vertical extent of the off-site MiBE plume.

2.0 FIELD ACTIVITIES

The scope of field activities was to remodel the gasoline service station. The remodeling activities included replacing the current USTs with larger capacity USTs, and moving their current location to the new area as presented in Figure 2. The field activities included excavating the old USTs and excavating the new UST pit to install the new USTs.

In August 2003, Mr. Shakoori retained W. A. Craig, Inc. (WAC) of Napa, California, as the construction contractor to excavate, remove and replace the existing USTs and remodel the service station. The following section describes the field activities conducted at the Site. Mr. Shakoori also retained SOMA to oversee the environmental aspects of the UST replacement including the collection of soil samples and the off-site disposal of the fuel-impacted soils. To oversee the compaction of the former UST area, SOMA retained BSK Associates (BSK) of Pleasanton, California. Photo-documentation of the field activities is presented in Appendix A.

2.1 Additional Soil Characterization

Prior to the UST removal activities, soils in the former and new UST areas needed to be characterized in order to expedite landfill acceptance of the off-hauled contaminated soils. SOMA personnel obtained a drilling permit from the Alameda County Public Works Agency (ACPWA); the drilling permit is attached as Appendix B. To characterize the soils, SOMA advanced two boreholes - one near the former UST pit and the other near the new UST area.

On August 20, 2003, SOMA retained Vironex to drill the two continuously sampled boreholes to total depths of 20 feet bgs. Based on photo-ionization detector (PID) readings, SOMA field personnel collected composite soil samples

from the soil cores and submitted them to Curtis & Tompkins Laboratories for analyses. With the composite analytical, SOMA obtained an acceptance letter from the landfill that allowed continuous delivery of the contaminated soils from the former and new UST areas.

2.2 UST Excavation

Prior to excavation activities, WAC obtained the necessary permits from the Alameda County Fire Department (ACFD). The UST Removal Permit is also attached as Appendix B. During the excavation activities, SOMA personnel monitored the air within and near the tank excavation pits using a PID as will be described in section 2.2.1.

On September 2, 2003, site preparation for excavation of the USTs commenced along with excavation of the new UST area. WAC used a John Deere backhoe to begin removing backfill around the three gasoline USTs located in the southeast corner of the Site and the nearby waste oil UST located adjacent to the east side of the station building. Vent pipes were attached to the former USTs and remnant fuel was pumped out of the former tanks. John's Excavating (JE), of Santa Rosa, California, used a 330L track-mounted excavator to excavate and emplace shoring corner posts into the new UST area.

On September 3, 2003, WAC continued to prepare for UST removal. The crew continued to expose the three gasoline USTs by removing and stockpiling contaminated gravel backfill. The remaining fuel was pumped from the southeast end of the tanks by tilting the three USTs toward the southeast edge of the tank pit. Pump turbines were also removed from the three USTs.

In the dispenser island area, WAC also began remodeling the dispenser islands. By the end of the day, the crew removed and stored the dispenser island pumps in the station building.

In the new UST area, JE continued excavating and installing shoring along the perimeter of this area to stabilize the excavation sidewalls. A convoy of trucks were uploaded with contaminated soils that were disposed at the Forward Landfill, a class II landfill facility in Stockton, California. Appendix C includes the manifests of the waste soils. SOMA collected a soil composite sample from the upper 5 feet of this area and delivered the sample to Curtis & Tompkins Laboratory for 24-hour rush analysis.

On September 4, 2003, JE used a track-mounted excavator to remove the four USTs. The ACHCS and the ACFD oversaw the UST removal. The former USTs included three ribbed single-walled fiberglass tanks with capacities of 6,000-gallons, 8,000-gallons, and 10,000-gallons and a 2,000-gallon double-walled fiberglass WOT. Under the supervision of the ACHCS, SOMA collected a groundwater sample from the pit bottom of the pit and confirmation samples from the excavation sidewalls as described in section 2.2.2. The ACHCS required no over-excavation of the former UST pit.

In the dispenser island area, WAC removed cut concrete slab sections overlying the product lines. The crew then hand-excavated gravel backfill to expose the product lines.

In the new UST area, JE continued excavating and uploading contaminated soils for off-hauling to Forward Landfill. When the lab reported only trace to non-detectable petroleum hydrocarbons in the composite sample collected from the upper 5 feet, SOMA directed WAC to use the remaining majority of this soil for backfilling the former UST pit.

On September 5, 2003, JE uploaded the contaminated gravel stockpile into a convoy of trucks that off-hauled the gravel to Forward Landfill. WAC skimmed free product from the surface of the groundwater pooled at the bottom of the

former UST pit and stored the free product water in six 55-gallon drums. Under the geotechnical oversight of BSK, the former UST pit was then backfilled and compacted to approximately 2.5 feet bgs as described in section 2.2.3. The waste oil UST pit was partially backfilled with clean stockpiled gravel that was removed from this tank excavation.

In the western third of the new UST area, JE continued excavating contaminated soils below 5 feet bgs and uploading the waste soil for off-hauling to Forward Landfill. Later in the day, the upper 5 feet was excavated, stockpiled, and emplaced into the former UST pit as described in section 2.2.3. Imported clean sandy backfill was delivered and stored on the west side of the Site – separate from the stockpiled native soil.

On September 8, 2003, engineered backfilling of the former UST pit continued with aggregate baserock emplaced and compacted to near surface grade under the oversight of BSK. Remaining native soil from the upper 5 feet of the new UST area was emplaced into the nearby former waste oil UST pit and compacted with the backhoe bucket.

In the new UST area, JE nearly completed excavating the new UST pit. A split-level was excavated at the pit bottom to accommodate an 8-foot diameter UST on the approximately 16-foot deep south side and a 10-foot diameter UST on the approximately 18 foot-deep north side.

On September 9, 2003, WAC and JE dewatered the new UST pit bottom and emplaced pea gravel bedding into the new UST pit in preparation for the new tanks. After emplacing the pea gravel bedding, tank-holding beams were emplaced followed by additional pea gravel. In the dispenser island area, product line excavation commenced.

No SOMA personnel was on-site to observe the installation of the new USTs that reportedly occurred on September 10, 2003. The old gasoline tanks were reportedly replaced with the new double-walled fiberglass USTs. The two new tanks have capacities of 12,000-gallons for storing regular unleaded gasoline and 20,000-gallons for storing super and plus unleaded gasoline.

On September 11, 2003, SOMA sampled the excavated product lines as shown in Figure 3. Under the supervision of the ACHCS, SOMA field personnel collected confirmation soil samples adjacent to each of the pump island dispensers at approximate depths of 2 to 3 feet bgs.

On September 15, 2003, SOMA field personnel returned to the Site for follow-up confirmation soil sampling for further excavation. As shown in Figure 3, SOMA field personnel collected confirmation soil samples from an approximate depth of 4 feet bgs at two locations in the product line excavations.

2.2.1 Excavation Oversight

As a safety precaution, the PID meter was used to monitor air quality inside and near the excavation pits for health and safety reasons during field activities. When ambient-air PID readings exceeded 10 parts per million (ppm), construction crew personnel in the immediate area donned air-purifying respirators with organic vapor cartridges. In general, [REDACTED] impacted soils were excavated and disposed of in Forward landfill, Stockton, California.

2.2.2 Groundwater and Soil Sampling Procedures

Under the direction of the ACHCS, SOMA field personnel conducted groundwater sampling and confirmation soil-sampling of the former UST pit. To collect a groundwater sample from the former UST pit, SOMA personnel lowered a disposable poly bailer into the pooled groundwater and collected decanted

groundwater into four 40-milliliter VOAs. The VOAs were sealed in a manner that prevented the inclusion of bubbles.

SOMA field personnel collected confirmation soil samples after the ACHCS inspector directed the backhoe operator to scoop out soil from the capillary fringe of the sidewalls at approximately 8 to 10 feet bgs. Field personnel drove a 6-inch long brass sleeve into native soil collected in the backhoe bucket, filling the sleeve to eliminate headspace in the sample. Both ends of the sample sleeve were covered with Teflon tape and plastic end caps. Soil and groundwater samples were labeled and placed in an ice chest with proper chain of custody (COC) documentation.

2.2.3 Excavation Backfilling and Compaction of the Former UST Area

Before emplacing backfill into the former UST area, BSK performed a compaction curve on representative samples of the selected backfill to provide an ASTM compaction standard. Representatives of BSK were on-site to oversee the emplacement and compaction of the backfill. Test results and compaction test curves are included in the BSK report, which is attached as Appendix D in this report.

After removing the fuel-impacted gravels from the former UST area, the construction crews backfilled and compacted the excavations with a variety of selected backfills. To bridge over groundwater, which was observed at the bottom of the excavation, and provide a firm structural foundation as per BSK, approximately 5 feet of crushed 1.5" drain rock was emplaced and compacted to approximately 7 feet bgs. JE compacted the drain rock with a vibratory compactor mounted on the hoe-end of the track-mounted excavator. WAC then emplaced filter fabric over the drain rock to prevent overlying finer grained fills from dropping into the interstitial drain-rock voids resulting in potential settlement of the former UST area.

JE and WAC then emplaced approximately 2 feet of native soil backfill over the fabric-covered drain rock and compacted the native soil with the vibratory compactor. For backfill grades deeper than 5 feet bgs, BSK tested a compacted lift of native soil emplaced as an access ramp above 5 feet bgs to verify adequate compaction procedure. When the backfill grade was shallower than 5 feet deep, BSK personnel directly tested the backfill compaction with a nuclear gauge to verify that the backfill had been compacted to at least 90% relative compaction, ASTM 1557 D.

The construction crews then emplaced approximately 2.5 feet of imported sandy backfill over the compacted native soil. This backfill layer was also compacted to 90% relative compaction using a Bomag vibratory sheepsfoot compactor when the vibratory compactor could not achieve the required 90% relative compaction.

JE and WAC then emplaced the final backfill layer of aggregate base to near surface grade. The aggregate baserock was compacted to the required 95% relative compaction with the vibratory sheepfoot compactor.

2.3 Well Decommissioning

Before commencing field activities, it was found that groundwater monitoring well ESE-4 was within the new UST pit area, and had to be decommissioned. Since the depth of the new UST excavation pit was expected to be about the same as the total depth of ESE-4, for cost saving purposes this well was not decommissioned prior to excavation activities. As such, during the week of September 2, 2003, well ESE-4 was decommissioned by excavation. Since the total depth of this well was 22 feet bgs, only 4 feet below final excavation depth, JE decommissioned ESE-4 by excavating all well construction materials to a depth of approximately 22 to 23 feet bgs.

After completing the field activities, it was found that one additional groundwater monitoring well, ESE-3, had been severely damaged during the USTs' removal.

ESE-3 is located immediately to the north of the former USTs pit as presented in Figure 2. To properly abandon ESE-3, SOMA contracted Woodward Drilling, of Rio Vista, California. The following is the procedure that Woodward Drilling used to decommission well ESE-3, which is in accordance with the published guidelines of the ACHCS.

2.3.1 Decommissioning of Well ESE-3

Before commencing drilling activities, SOMA obtained the necessary drilling permit from the APWA (attached as Appendix B).

On October 3, 2003, monitoring well ESE-3 was decommissioned by drilling out the well casing to a depth of approximately 31 feet bgs using an 8-inch hollow stem auger. When the well casing was completely removed, the auger stem was left in place in the borehole. Portland I/II cement with approximately 5% bentonite was pumped through the hollow stem auger and into the borehole. After pumping the cement-bentonite slurry into the borehole, the hollow stem auger was removed in 5-foot increments from the borehole to optimize complete filling of the well borehole.

Soil cuttings generated by the drilling were placed in 55-gallon drums and stored on-site. After decommissioning well ESE-3, the drilling equipment was properly decontaminated.

SOMA collected a composite soil sample from the soil cuttings and a water sample from the decontamination process to determine proper disposal designations of these drums. On October 3, 2003, SOMA's field personnel delivered the samples to Curtis & Tompkins, Ltd. Laboratory in Berkeley, California. The well decommissioning documentation is presented in Appendix E.

3.0 LABORATORY ANALYTICAL RESULTS

Curtis & Tompkins, Ltd., a state certified laboratory, analyzed the soil and groundwater samples for TPH-g, BTEX, MtBE, and total lead. The laboratory respectively prepared the samples for TPH-g and TPH-d analyses using EPA Methods 5030B and measured the constituents of concern using EPA Method 8015B. The samples for BTEX and MtBE analyses were prepared using EPA Method 5030B and analyzed using EPA Method 8021B. The laboratory confirmed detections of MtBE using EPA Method 8260B. Total samples for lead analyses were prepared using EPA Method 3050 and analyzed using EPA Method 6010B. Appendix F presents the soil and groundwater laboratory analytical reports and chain of custody documentation for the samples.

3.1 Confirmation Soil Sampling Results

On September 4, 2003, confirmation soil sampling was conducted beneath the former gasoline and waste oil UST pits and in the product line trenches near the pump islands. The samples were delivered to Curtis & Tompkins Laboratory for analyses. The following describes the results of the laboratory analyses.

As shown in Table 1a, soil analytical results indicate that the most contaminated sidewall of the gasoline UST pit appears to be on the downgradient (southwest) side. The southwest sidewall sample contained TPH-g at 17,000 ug/Kg, toluene at 44 ug/Kg, ethylbenzene at 280 ug/Kg, total xylenes at 112 ug/Kg, MtBE at 71 ug/Kg, and TPH-d at 36 ug/Kg. In the other sidewall samples, the lab reported these constituents of concern at near trace levels or did not detect these compounds above laboratory reporting limits.

Table 1b presents the results of the laboratory analysis on the soil samples collected from beneath the product lines on September 11 and 15, 2003. As the

results indicate, elevated levels of TPH-g were reported beneath the product lines at 4 feet bgs. However, based upon the ACHCS's request, the contaminated soil was left in place for cost saving purposes.

In the sidewall sample from the waste oil UST, the lab did not detect petroleum hydrocarbon or volatile organic constituents of concern above the laboratory reporting limits. Chromium, lead, nickel and zinc were detected at 31, 6.3, 36, and 50 mg/Kg.

3.2 Groundwater Sampling Results Form Former UST Pit

As discussed earlier, free product was encountered at the top of the watertable beneath the former UST pit. After removing free product and storing it in the 55-gallons drums, groundwater samples were collected and submitted to the laboratory for analyses. The following section discusses the laboratory results on the groundwater samples collected.

As shown in Table 2, MtBE was detected at 14,000 ug/L in a groundwater sample collected from the former UST pit. The laboratory also reported TPH-g at 1,300 ug/L, benzene at 110 ug/L, toluene at 220 ug/L, ethylbenzene at 18 ug/L, and total xylenes at 171 ug/L.

4.0 WASTE DISPOSAL

On October 13, 2003, SOMA contracted Foss Environmental to remove the soil and water drums from the Site. Drummed free product water was removed as hazardous waste and the other drummed solid and liquid wastes were removed as non-hazardous wastes. The waste disposal documentation is presented in Appendix C.

5.0 REPORT LIMITATIONS

This report summarizes the work overseen and conducted by SOMA, including observations and descriptions of the Site's conditions. It includes the analytical results produced by Curtis & Tompkins Laboratories for the current site excavation and soil remediation. All conclusions and recommendations are based on the results of the laboratory analysis and field observations. Conclusions beyond those specifically stated in this document should not be inferred from this report.

SOMA warrants that the services provided were done in accordance with the generally accepted practices in the environmental engineering and consulting field.

PERMIT CONDITIONS

Critical Permit Requirements Apply

- A. GENERAL.
 1. A permit application should be submitted so as to arrive at the ACPWA office five days prior to proposed starting date.
 2. Submit to ACPWA within 60 days after completion of permitted original Department of Water Resources-Well Completion Report.
 3. Permit is void if project not begun within 90 days of approval date.
- B. WATER SUPPLY WELLS
 1. Minimum surface seal thickness is two inches of cement grout placed by trowel.
 2. Minimum seal depth is 30 feet for municipal and industrial wells or 20 feet for domestic and irrigation wells unless a lesser depth is specially approved.
- C. GROUNDWATER MONITORING WELLS INCLUDING PNEUMOMETERS
 1. 45% in. surface seal thickness is two inches of cement grout placed by trowel.
 2. Minimum seal depth for monitoring wells is the maximum depth permissible or 20 feet.
- D. GEOTECHNICAL (containing water)

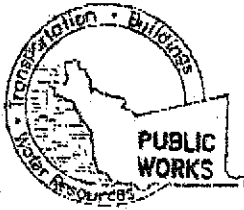

Backfill bore hole by trowel with cement grout or cement grout and aggregate. Upper seal area fast installed in kind or with compacted tailings.
- K. CATHODIC

Well hole inside zone with concrete placed by trowel.
- F. WELL DESTRUCTION

Send a map of work site. A separate permit is required for wells deeper than 45 feet.
- G. SPECIAL CONDITIONS

NOTE: One application can be submitted for each well or well structure. Multiple borings on one application are acceptable for geotechnical and contamination investigations.

PERMIT NO. W03-0758

WATER RESOURCES SECTION GROUNDWATER PROTECTION ORDINANCE

B#1-GENERAL CONDITIONS: GEOTECHNICAL & CONTAMINATION BOREHOLES

1. Prior to any drilling activities shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that Federal, State, County or to the City and follow all City or County Ordinances. No work shall begin until all the permits and requirements have been approved or obtained.
2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be back filled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.
3. Permittee, permittee's, contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on-or off site storm sewers, dry wells, or waterways or be allowed to move off the property where work is being completed.
4. Permit is valid only for the purpose specified herein August 19, to August 19, 2003. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.
5. Drilling Permit(s) can be voided/ canceled only in writing. It is the applicants responsibilities to notify Alameda County Public Works Agency, Water Resources Section in writing for an extension or to cancel the drilling permit application. No drilling permit application(s) shall be extended beyond ninety (90) days from the original start date. Applicants may not cancel a drilling permit application after the completion date of the permit issued has passed.
6. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, property damage, personal injury and wrongful death.
7. Submit site plan showing location of boring.

UNDERGROUND STORAGE TANK SYSTEM CLOSURE PERMIT APPLICATION/CLOSURE PLAN

1. Facility Name (Tank Site): CASTRO VALLEY CHEVRON Bldg. No.: _____
 Address: 3519 Castro Valley Blvd City: Castro Valley Zip: 94546
 EPA ID No.: _____ Contact Person: _____ Phone No.: (____) _____

 Address: 3519 Castro Valley Blvd City: Castro Valley Zip: 94546

3. Tank Operator's Name: Azmi Shakkari
 Address: _____ City: _____ Zip: _____

4. Applicant's Name: FUEL SYSTEMS CONSULTING
 Address: 490 Express Dr City: Rio Vista CA Zip: 94571
 Contact Person: ROBERT LEACH Phone No.: (707) 374 4340

5. Tank Closure Contractor: _____
 Address: _____ City: _____ Zip: _____
 Contact Person: _____ Phone No.: (____) _____

Hazardous Substance Removal Certificate: on file; attached
 Worker's Compensation Declaration: on file; attached; not applicable
 Business License (if required): on file; attached; not applicable

6. Firm that will take soil/water samples: _____ Phone No.: (____) _____

7. State-certified laboratory that will analyze samples: _____ Phone No.: (____) _____

This box is for agency use only

Laboratory analyses shall test for:

	TPH G	TPH D	BTX&E	MTBE	TE Lead	Cl Hydro	O&G	EPA 8270	pH	Other (Specify)
Tank 1										
Tank 2										
Tank 3										
Tank 4										
Tank 5										
Tank 6										

Additional analyses may be required by inspector in field.

8. Name of Licensed Transporter of Tanks: _____

EPA ID No.: _____ Phone No.: (____) _____

9. Destination of Tanks and Piping: _____

10. Tank System:	Size (gallons)	Substance(s) Previously Contained
Tank 1	10,000	87 Gasoline
Tank 2	8,000	89 Gasoline
Tank 3	6,000	92 Gasoline
Tank 4	2,000	WASTE OIL
Tank 5		
Tank 6		

If the owner/operator does not have a current Hazardous Materials Business Plan/HMMP which includes these tanks on file with the local agency, provide an 8-1/2" x 11" plot plan of the tanks to be closed. Indicate the nearest cross street to the facility, buildings immediately adjacent to the tanks, location(s) of tanks to be closed, and location of nearby utilities.

This Underground Tank Closure Permit expires 6 months from the date of closure plan approval. If tanks have not been closed within 6 months, a new closure permit application and appropriate fees may be required.

Facility closure inspections must be scheduled at least 48 hours in advance. Call the appropriate local agency to make necessary arrangements.

I certify that I have read the tank closure guidelines and declare that the above information is correct to the best of my knowledge. The owner of the tank(s) described above is aware of the pending closure. I agree to comply with all applicable city and county ordinances and state laws relating to hazardous materials/wastes, and hereby authorize representatives of local agencies to enter upon the within mentioned property for inspection purposes.

FLAMMABLE AND COMBUSTIBLE LIQUID TANK REMOVAL GUIDELINE

PERMITS

Article 4 – Uniform Fire Code – Section 4.101-18

Permit is required and shall be obtained from the Fire Prevention office to remove, abandon, place temporarily out of service, or otherwise dispose of any combustible or flammable liquid storage tank. In addition, the contractor shall have passed the hazardous substance removal certification examination in accordance with Senate Bill 2004. Contact Contractor's State License Board for more information.

Permit application can be obtained from Alameda County Fire Prevention office, located at 22341 Redwood Rd., Castro Valley, CA 94546. For more information, call (510) 670-5853.

PRIOR TO REMOVAL

1. Notify the Fire Prevention office a minimum of 48 hours in advance to schedule an inspection for removal. The inspection shall be coordinated with the Alameda County Environmental Health Department, who will have a representative on site as well.
2. Ensure that any tank product or residue has been satisfactorily removed from tank and all product lines, manifested, and transported follow State and local regulations.
3. Electrical lines, piping, and like items associated with the tanks shall be isolated or disconnected.
4. Proper fire safety procedures shall be followed.
 - A) "NO SMOKING" signs shall be posted.
 - B) No cutting torches, spark producing equipment or open flame shall be used on tanks or piping.
 - C) A minimum of two portable fire extinguishers, rated 2A-40B/C shall be on site. A first aid kit shall be on site and readily accessible.
5. The vent piping shall be left intact until the tank is properly purged. Purge all vapors through the vent piping which shall terminate a minimum 12 feet above grade, 3 feet from adjacent roofline. If the vent piping is not in place, prior to purging the tank a vent pipe shall be installed by the contractor.
6. To purge tank, place a minimum 15 pounds of dry ice per 1000 gallons of tank capacity into the tank **TWO HOURS PRIOR** to any further work being performed. Dry ice

ALAMEDA COUNTY HEALTH CARE SERVICES AGENCY
 ENVIRONMENTAL HEALTH SERVICES
 1131 HARBOR BAY PARKWAY, RM 250
 ALAMEDA, CA 94502-6577
 PHONE # 510/567-6700

ACCEPTED

Underground Storage Tank Closure Permit Applications
 Alameda County Division of Hazardous Materials
 1131 Harbor Bay Parkway, Suite 250
 Alameda, CA 94502-6577

These closure/removal plans have been received and found to be acceptable and essentially meet the requirements of State and Local Health Laws. Changes to your closure plans indicated by this Department are to assure compliance with State and local laws. The project proposed herein is now released for issuance of any required building permits for construction/demolition.
 One copy of the accepted plans must be on the job and available to all contractors and craftsmen involved with the removal.
 Any changes or alterations of these plans and specifications must be submitted to this Department and to the Fire and Building Inspections Department to determine if such changes meet the requirements of State and local laws. Notify this Department at least 72 hours prior to the following required inspections:

- Removal of Tank(s) and Piping
- Sampling
- Final Inspection

Issuance of a) permit to operate, b) permanent site closure, is dependent on compliance with accepted plans and all applicable laws and regulations.

THERE IS A FINANCIAL PENALTY FOR NOT OBTAINING THESE INSPECTIONS.

State Certification No. DHS No 1644

13. Have tanks or pipes leaked in the past? Yes [] No [] Unknown [X]

If yes, describe. _____

14. Describe methods to be used for rendering tank(s) inert:

Triple rinse USTs - 15 lbs of Dry ice per 1000 galbns.

Before tanks are pumped out and inerted, all associated piping must be flushed back into the tank(s). All accessible piping must then be removed. Inaccessible piping must be permanently plugged using grout.

(JD)

The Bay Area Air Quality Management District, 415/771-6000, along with local Fire and Building Departments, must also be contacted for tank removal permits. Fire departments typically require the use of a combustible gas indicator to verify tank inertness. It is the contractor's responsibility to have a functional combustible gas indicator on-site to verify that the tank(s) is inerted.

(JD)

15. Tank History and Sampling Information *** (see instructions) ***

Tank		Material to be sampled (tank contents, soil, groundwater)	Location and Depth of Samples (ALL)
Capacity (GALLONS)	Use History include date last used (estimated)		
10,000	Regular Unleaded in use	Soil, groundwater	① Soil samples will be collected 2 feet into native soil ② Groundwater samples (if encountered) will be grab samples per excavation
8,000	Super Unleaded in use	Soil, groundwater	
6,000	Plus Unleaded in use	"	
2,000	Waste Oil closed in place	"	

One soil sample must be collected for every 20 linear feet of piping that is removed. A ground water sample must be collected if any ground water is present in the excavation.

Excavated/Stockpiled Soil

Stockpiled Soil Volume
(estimated)

≈ 200 cubic yards

Sampling Plan

4 point composite per 100 yards

Stockpiled soil must be placed on bermed plastic and must be completely covered by plastic sheeting.

Will the excavated soil be returned to the excavation immediately after tank removal? yes no unknown

If yes, explain reasoning _____

If unknown at this point in time, please be aware that excavated soil may not be returned to the excavation without prior approval from this office. This means that the contractor, consultant, or responsible party must communicate with the Specialist **IN ADVANCE** of backfilling activities. *(JD)*

16. Chemical methods and associated detection limits to be used for analyzing samples:

The Tri-Regional Board recommended minimum verification analyses and practical quantitation reporting limits should be followed. See attached Table 2.

W.A. Craig Inc will comply w/ Tri regional recommendations

17. Submit Site Health and Safety Plan (See Instructions)

Contaminant Sought	EPA or Other Sample Preparation Method Number	EPA or Other Analysis Method Number	Method Detection Limit
<p>TPH g BTEX Fuel Oxy Pb SCVBS TOTAL Pb CL HL LUST 5 METALS TPH-d O&G SDMI VOCs</p> <p>ALL TANKS WASTE OIL ONLY</p>		<p>As recommended by Tri Regional Guidelines</p>	

18. Submit Worker's Compensation Certificate copy / ATTACHED

Name of Insurer STATE Comp Insurance Fund

- 19. Submit Plot Plan *** (See Instructions) ***
- 20. Enclose Deposit (See Instructions)
- 21. Report all leaks or contamination to this office within 5 days of discovery.
The written report shall be made on an Underground Storage Tank Unauthorized Leak/Contamination Site Report (ULR) form. (JK)
- 22. Submit a closure report to this office within 60 days of the tank removal. The report must contain all information listed in item 22 of the instructions. (JK)
- 23. Submit State (Underground Storage Tank Permit Application) Forms A and B (one-B form for each UST to be removed) (mark box 8 for "tank removed" in the upper right hand corner) (JK)

I declare that to the best of my knowledge and belief that the statements and information provided above are correct and true.

I understand that information, in addition to that provided above, may be needed in order to obtain approval from the Environmental Protection Division and that no work is to begin on this project until this plan is approved.

I understand that any changes in design, materials or equipment will void this plan if prior approval is not obtained.

I understand that all work performed during this project will be done in compliance with all applicable OSHA (Occupational Safety and Health Administration) requirements concerning personnel health and safety. I understand that site and worker safety are solely the responsibility of the property owner or his agent and that this responsibility is not shared nor assumed by the County of Alameda.

Once I have received my stamped, accepted closure plan, I will contact the project Hazardous Materials Specialist at least three working days in advance site work to schedule the required inspections.

CONTRACTOR INFORMATION

Name of Business W.A. Craig, Inc.

Name of Individual William A. Craig II

Signature  Date 5/01/03

PROPERTY OWNER OR MOST RECENT TANK OPERATOR (Circle one)

Name of Business CASTRO VALLEY CHEVRON

Name of Individual A. MARIANO SHAKOORE

Signature  Date 5/31/03

INSTRUCTIONS

General Instructions

- * Three (3) copies of this plan plus attachments and a deposit must be submitted to this Department.
- * Any cutting into tanks requires local fire department approval.
- * One complete copy of your approved plan must be at the construction site at all times; a copy of your approved plan must also be sent to the landowner.
- * State of California Permit Application Forms A and B are to be submitted to this office. One Form A per site, one Form B for each removed tank.

Line Item Specific Instructions

2. SITE ADDRESS
Address at which closure is taking place.
5. EPA I.D. NO. under which the tanks will be manifested
EPA I.D. numbers may be obtained from the State Department of Toxic Substances Control, 916/324-1781.
6. CONTRACTOR
Prime contractor for the project..
10. STATE REGISTERED HAZARDOUS WASTE TRANSPORTERS/FACILITIES
 - a) All residual liquids and sludges are to be removed from tanks before tanks are inerted.
 - c) Tanks must be hauled as hazardous waste.
 - d) This is the place where tanks will be taken for cleaning.
15. TANK HISTORY AND SAMPLING INFORMATION

Use History - This information is essential and must be accurate. Include tank installation date, products stored in the tank, and the date when the tank was last used.

Material to be sampled - e.g. water, oil, sludge, soil, etc.

Location and depth of samples - e.g. beneath the tank a maximum of two feet below the native soil/backfill interface, side wall at the high water mark, etc.

16. CHEMICAL METHODS AND ASSOCIATED DETECTION LIMITS
See attached Table 2.

17. SITE HEALTH AND SAFETY PLAN

A site specific Health and Safety plan must be submitted. We advocate the site health and safety plan include the following items, at a minimum:

- a) The name and responsibilities of the site health and safety officer;
- b) An outline of briefings to be held before work each day to appraise employees of site health and safety hazards;
- c) Identification of health and safety hazards of each work task. Include potential fire, explosion, physical, and chemical hazards;
- d) For each hazard, identify the action levels (contaminant concentrations in air) or physical conditions which will trigger changes in work habits to ensure workers are not exposed to unsafe chemical levels or physical conditions;
- e) Description of the work habit changes triggered by the above action levels or physical conditions;
- f) Frequency and types of air and personnel monitoring - along with the environmental sampling techniques and instrumentation - to be used to detect the above action levels. Include instrumentation maintenance and calibration methods and frequencies;
- g) Confined space entry procedures (if applicable);
- h) Decontamination procedures;
- i) Measures to be taken to secure the site, excavation and stockpiled soil during and after work hours (e.g. barricades, caution tape, fencing, trench plates, plastic sheeting, security guards, etc.);
- j) Spill containment/emergency/contingency plan. Be sure to include emergency phone numbers, the location of the phone nearest the site, and directions to the hospital nearest the site;
- k) Documentation that all site workers have received the appropriate OSHA approved trainings and participate in appropriate medical surveillance per 29 CFR 1910.120; and
- l) A page for employees to sign acknowledging that they have read and will comply with the site health and safety plan.

The safety plan must be distributed to all employees and contractors working in hazardous waste operations on site. A complete copy of the site health and safety plan along with any standard operating procedures shall be on site and accessible at all times.

NOTE: These requirements are excerpts from 29 CFR Part 1910.120(b)(4), Hazardous Waste Operations and Emergency Response; Final Rule, March 6, 1989. Safety plans of certain underground tank sites may need to meet the complete requirements of this Rule.

19. PLOT PLAN

The plan should consist of a scaled view of the facility at which the tank(s) are located and should include the following information:

- a) Scale;
- b) North Arrow;
- c) Property Lines;
- d) Location of all Structures;
- e) Location of all relevant existing equipment including tanks and piping to be removed and dispensers;
- f) Streets;
- g) Underground conduits, sewers, water lines, utilities;
- h) Existing wells (drinking, monitoring, etc.);
- i) Depth to ground water; and
- j) All existing tank(s) and piping in addition to the tank(s) being removed.

20. DEPOSIT

A deposit, payable to "Treasurer of Alameda County" for the amount indicated on the Alameda County Underground Storage Tank Fee Schedule, must accompany the plans.

21. Blank Unauthorized Leak/Contamination Site Report forms may be obtained in limited quantities from this office or from the San Francisco Bay Regional Water Quality Control Board (510/286-1255). Larger quantities may be obtained directly from the State Water Resources Control Board at (916) 739-2421.

22. TANK CLOSURE REPORT

The tank closure report should contain the following information:

- a) General description of the closure activities;
- b) Description of tank, fittings and piping conditions. Indicate tank size and former contents; note any corrosion, pitting, holes, etc.;
- c) Description of the excavation itself. Include the tank and excavation depth, a log of the stratigraphic units encountered within the excavation, a description of root holes or other potential contaminant pathways, the depth to any observed ground water, descriptions and locations of stained or odor-bearing soil, and descriptions of any observed free product or sheen;
- d) Detailed description of sampling methods; i.e. backhoe bucket, drive sampler, bailer, bottle(s), sleeves
- e) Description of any remedial measures conducted at the time of tank removal;
- f) To-scale figures showing the excavation size and depth, nearby buildings, sample locations and depths, and tank and piping locations. Include a copy of the plot plan prepared for the Tank Closure Plan under item 19;
- g) Chain of custody records;
- h) Copies of signed laboratory reports;
- i) Copies of "TSDF to Generator" Manifests for all hazardous wastes hauled offsite (sludge, rinsate, tanks and piping, contaminated soil, etc.); and
- j) Documentation of the disposal of/and volume and final destination of all non-manifested contaminated soil disposed offsite.

RECOMMENDED MINIMUM VERIFICATION ANALYSES FOR UNDERGROUND TANK LEAKS

For Use by Unidocs Member Agencies or where approved by your Local Jurisdiction

TABLE #2
