4th Quarter 2003, Status Report and Request for Closure

Dear Mr. Gholami:

Presented herein is the Fourth Quarter 2003, Status Report prepared for Former Thrifty Oil Co. (Thrifty) Station #054 located at 2504 Castro Valley Boulevard, Castro Valley, California (**Figure 1**). This report presents the results of the groundwater monitoring activities conducted during the fourth quarter of 2003. Thrifty has retained the services of Earth Management Company (EMC) to conduct quarterly groundwater monitoring and sampling activities at this site.

Groundwater Monitoring

Depth to groundwater is measured in each monitoring well quarterly. Historic groundwater gauging data obtained from April 11, 1988 through December 4, 2003, is presented in **Table 1**. In general, groundwater occurs beneath the station at depths ranging from 1.16 feet below top of casing (btc) in monitoring well RS-9 to 6.78 feet btc in monitoring well RS-8 (**Appendix A**). A groundwater elevation contour map based on the December 4, 2003 data is presented in **Figure 1**. Groundwater elevation data indicates that the general direction of groundwater flow beneath the site is toward the southeast with a hydraulic gradient of approximately 0.0733 to 0.1183 feet/foot.

Quarterly Groundwater Sampling

As part of the ongoing groundwater-monitoring program, groundwater samples were obtained from selected monitoring wells PW-1, RE-2, RE-3, RE-4, RE-6, RE-7, RS-9, and RS-11 on September 4, 2003. In a letter from the Alameda County Health Care Services (ACHCS) dated November 6, 2001, the ACHCS released Thrifty from collecting groundwater samples from wells PW-2, RE-1, RE-5, RS-8, and RS-10 until further notice.

Groundwater samples were obtained by EMC and delivered in a chilled state in an ice chest following strict Chain-of-Custody procedures to a state-certified laboratory. The samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) by EPA Method 8015M for gasoline and for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) by EPA Method 8021B. Copies of the EMC Field Status Reports are presented in **Appendix A**, and copies of the laboratory analytical reports are contained in **Appendix B**.

TPHg, BTEX, and MTBE concentrations appear in **Table 1** and laboratory reports are provided in **Appendix B**. TPHg, benzene, and MTBE isoconcentration maps are presented in **Figures 2, 3, and 4**, respectively. The highest laboratory analytical concentrations for TPHg, benzene, and MTBE were found in monitoring offsite well RS-9 (19,200 ug/L, 5,270 ug/L, and 217 ug/L, respectively).

Based on a new survey of top of casing elevations performed by Morrow Surveying in October 2003, it is confirmed and Thrifty again reiterates that well RS-9 is located up gradient of the Thrifty site, and contamination found in this well appears to be originating from an up gradient off-site source. TOSCO Marketing Company is the current operator of the service station, acquired the lease from BP Oil, who previously leased the property beginning on July 10, 1991. **Due to the low TPHg, benzene, and MTBE concentrations in all onsite monitoring wells, Thrifty respectfully repeats its request for closure of Thrifty Station #054 located at 2504 Castro Valley Boulevard, Castro Valley, California.**

Planned Activities

Thrifty will continue the groundwater monitoring, gauging, and sampling events at this site on a quarterly basis. All interpretations expressed in this report are based solely upon the review of data collected by EMC and laboratory analyses by Associated Laboratories.

Respectfully submitted,
