Subject: Fuel Leak Case No. RO0000350 and Geotracker Global ID T0600100344, CHEVRON #9-5607, 5269 CROW CANYON RD, CASTRO VALLEY CA 94552 – Groundwater Monitoring Requirements

Dear Responsible Party:

The purpose of this correspondence is to inform you of changes to groundwater monitoring requirements for all fuel leak cases in California. The California State Water Resources Control Board (State Water Board) has approved Resolution No. 2009-0042 (*Actions to Improve Administration of the UST Cleanup Fund and UST Cleanup Program*). Resolution No. 2009-0042 states that, "*Regional Water Board and LOP agencies shall reduce quarterly groundwater monitoring requirements to semiannual or less frequent monitoring at all site unless site-specific needs warrant otherwise and shall notify all responsible parties of the new requirements no later than August 1, 2009. If more than semiannual monitoring is required for a case, the responsible party and State Water board shall be notified of the rationale and the notice shall be posted on Geotracker.*"

Sites with Ongoing Groundwater Monitoring

If your site has ongoing groundwater monitoring, the frequency of groundwater monitoring is to be reduced from quarterly to semiannual monitoring in accordance with Resolution No. 2009-0042, unless site-specific needs warrant otherwise. Examples of site-specific conditions where monitoring more frequent than semiannual may be warranted include but are not limited to the following:

- Assessment incomplete
- WDR permit requirement
- Well being sampled to evaluate ongoing or proposed pilot tests, interim remedial actions, or long-term remedial actions for progress assessment or where data are needed to monitor or optimize system performance.
- Well being sampled for free product evaluation and reduction verification
- Well being sampled within first year of being installed
- Well being sampled to evaluate post-remedial action verification monitoring
- Well has not shown reliable consistency yet to warrant reduction on sampling frequency
- Well is last point of monitoring prior to possible impact to receptor
- Plume that is currently affecting a sensitive receptor or potentially could affect a sensitive receptor such as a water supply well.

Upon review of your site, we find the following site-specific conditions that warrant continuation of quarterly groundwater monitoring:

Responsible Party
RO0000350,
July 24, 2009, Page 2

- It appears appropriate to monitor wells C9 and C15 on a quarterly basis as they are currently or may impact sensitive receptors (residential units and Crow Creek, respectively).
- Five wells are currently monitored on an annual basis. It would be appropriate for these to continue at this interval.
- One well is currently monitored on a semi-annual basis. It would appear appropriate that an additional five wells can convert to a semi-annual basis.

If you believe that additional wells should continue on a quarterly groundwater monitoring schedule, you may submit a proposal for a revised sampling and analysis schedule along with your technical rationale supporting the proposal. If site-specific conditions warrant continuation of quarterly groundwater monitoring of other wells, please submit a proposed sampling and analysis schedule along with your technical rationale supporting the proposal by **August 24, 2009**.

If you have any questions, please call me at (510) 567-6876 or send me an electronic mail message at mark.detterman@acgov.org.

Sincerely,

Mark E. Detterman, PG, CEG
