Re: Former Chevron Service Station 95607
5269 Crow Canyon Road
Castro Valley, CA
ACEH Case #RO 0350

I have reviewed the attached Monthly Remedial Progress and System Shutdown Report – February and March 2016.

The information in this report is accurate to the best of my knowledge and all local Agency/Regional Board guidelines have been followed. This report was prepared by GHD Services Inc., upon whose assistance and advice I have relied.

This letter is submitted pursuant to the requirements of California Water Code Section 13267(b)(1) and the regulating implementation entitled Appendix A pertaining thereto.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge.

Sincerely,

Carryl MacLeod
Project Manager

Attachment: Monthly Remedial Progress and System Shutdown Report – February and March 2016

April 27, 2016 Reference No. 311950

Mr. Mark Detterman
Alameda County Environmental Health Services

Re: Monthly Remedial Progress and
System Shut-Down Report –
February and March 2016
Former Chevron Station 95607
5269 Crow Canyon Road
Castro Valley, California
Fuel Leak Case RO0350

Dear Mr. Detterman:

GHD Services Inc. (GHD), on behalf of Chevron Environmental Management Company (EMC), is providing this *Monthly Remedial Progress and System Shut-Down Report – February and March 2016* (Report), for the site referenced above (Figure 1). In accordance with Cambria Environmental Technology's (Cambria's) Remedial Action Plan (RAP), dated January 8, 2007 and Conestoga-Rovers & Associates' (CRA's) Remedial Action Plan (RAP) Addendum, dated April 4, 2013, a dual-phase extraction (DPE) system was proposed to remove hydrocarbon mass in soil and groundwater at the site to the extent practical. The RAP was approved by Alameda County Environmental Health Services (ACEHS) in a letter dated December 11, 2013.

The DPE system began operation on September 29, 2014. The system was down for repair from July 4, 2015 to October 22, 2015 and was shut down for good on March 15, 2016. GHD conducted routine operation and maintenance; adjusted the DPE system to maximize effectiveness; and collected groundwater and soil vapor samples monthly for analysis to confirm the DPE system was operating within the Bay Area Air Quality Management District (BAAQMD) and Castro Valley Sanitation District (CVSan) permit conditions.

This report includes a monthly summary of the dual-phase extraction (DPE) system operations for the reporting period between January 21, 2016 and March 15, 2016 (Tables 1 through 4) and a cumulative summary of operations from startup to shut-down.

GHD Services Inc.
5900 Hollis Street Suite A Emeryville California 94608 USA

1. Monthly Remedial Summary – February and March 2016

The SVE and GWET systems (collectively referred to as the DPE system) shut-down on February 8, 2016 due to a high temperature alarm in the oxidizer compartment. The air conditioner unit in the oxidizer room was adjusted and the DPE system was restarted on February 12, 2016. On March 13, 2016 the DPE system shut-down due to a heavy rain event that filled the DPE-3 well vault. The system was restarted on March 15, 2016 to collect shut-down compliance samples. GHD collected monthly compliance effluent samples from the SVE and GWET systems on February 3, 2016 and March 3, 2016.

The DPE system was shut-down on March 15, 2016 based on low vapor mass removal rates (<12.4 pounds per day [ppd]) observed January 2016 through March 2016 (with the exception of 40.5 ppd on February 16, 2016 and 54 ppd on March 15, 2016). Graphs 1 and 2 summarize the vapor concentrations and mass removal rates for total petroleum hydrocarbons as gasoline (TPHg) and benzene, respectively.

During the reporting period approximately 1.14 pounds of TPHg and 0.04 pounds of benzene were removed via the dissolved phase (Table 2). In addition, approximately 1,180 pounds of TPHg and 13.8 pounds of benzene were removed via the vapor phase (Table 4). Graphs 3 and 4 summarize the groundwater concentrations and mass removal rates for TPHg and benzene.

A summary of the DPE system operational performance for the months of February 2016 and March 2016 is presented below.

VAPOR-PHASE EXTRACTION DATA – FEBRUARY 2016 AND MARCH 2016

Soil Vapor Influent Flow Rate (average scfm)	110.5 scfm (108 scfm - Feb & 113 scfm - Mar)
Soil Vapor Laboratory Influent Concentrations (TPHg ppmv)	240 ppmv & 1,100 ppmv (February) 290 ppmv & 1,300 ppmv (March)
Soil Vapor Laboratory Influent Concentrations (Benzene ppmv)	4.1 ppmv & 18 ppmv (February) 5.3 ppmv & 16 ppmv (March)
Soil Vapor Mass Removal (lb TPHg/period)	1,180 lbs (451 lbs– Feb & 729 lbs – Mar)
Soil Vapor Mass Removal (lb Benzene/period)	13.8 lbs (5.9 lbs – Feb & 7.9 lbs – Mar)
Soil Vapor Mass Removal (lb MTBE/period)	6.9 lbs (2.4 lbs – Feb & 4.5 lbs – Mar)
Soil Vapor Extraction Period Operating Uptime (hours)	1,267 hours
Soil Vapor Treatment Destruction Efficiency (%)	100%

lbs - pounds
ppmv – parts per million by volume
scfm – standard cubic feet per minute

DISSOLVED-PHASE EXTRACTION DATA - FEBRUARY 2016 AND MARCH 2016

Maximum Groundwater Extraction Rate (gpm)	1.25 gpm
Average Groundwater Extraction Rate (gpm)	1.02 gpm
Dissolved-Phase Mass Removal Rate (lb TPHg/period)	1.14 pounds
Dissolved-Phase Mass Removal Rate (lb Benzene/period)	0.04 pounds
Total Volume Groundwater Treated (gallons)	77,670 gallons
Groundwater Extraction Period Operating Uptime (hours)	1,267.2 hours

gpm – gallons per minute

2. Cumulative Remedial Summary

Since startup the remedial system accomplished the following:

SVE System

- The TPHg removal rate dropped from a high of 405.2 pounds of TPHg per day (September 2014) to an average of 17.9 pounds of TPHg per day (average from January to March 2016) (Table 4).

- Approximately 13,918 pounds of TPHg were removed by SVE (Table 1). As shown on Graph 1, TPHg removal rates have steadily declined to an asymptotic level.

- The benzene removal rate dropped from a high of 3.3 pounds of benzene per day (September 2014) to an average of 0.2 pounds per day (average from January to March 2016) (Table 4).

- Approximately 138 pounds of benzene were removed. Benzene removal has steadily declined to asymptotic levels (Graph 2).

GWET System

- The GWET system extracted, treated and discharged 467,200 gallons of impacted groundwater, removing 12.6 pounds of TPHg and 1.3 pounds of benzene (Table 2).

- TPHg extraction concentrations were reduced from 8,000 micrograms per liter (µg/L) (November 2014) to 1,700 µg/L (March 2016) and benzene extraction concentrations were reduced from 1,800 µg/L (September 2014) to 53 µg/L (March2016).

- Current (April 2016) dissolved hydrocarbon concentrations in groundwater collected from source area and downgradient monitoring wells are one to three orders of magnitude lower than historical dissolved hydrocarbon concentrations, as shown in the table below.

CURRENT AND HISTORIC DISSOLVED-PHASE ANALYTICAL DATA

Well	TPHg (µg/L)		Benzene (µg/L)		Toluene (µg/L)		Ethylbenzene (µg/L)		Total Xylenes (µg/L)		MTBE (µg/L)	
	7/14	4/16	7/14	4/16	7/14	4/16	7/14	4/16	7/14	4/16	7/14	4/16
C-1	5,700*	55 J	450*	<0.5	35*	<0.5	130*	<0.5	49*	3	<1.0*	<0.5
C-3	38,000	<50	12,000	0.5 J	300	<0.5	3,000	<0.5	1,600	<0.5	<10	<0.5
C-6	12,000	1,100	3,800	4	19	<0.5	200	2	68	1	17	3
C-9	17,000	8,400	5,500	170	22	140	240	120	59	990	6	<3

Notes:

* - Well was not sampled on July 2014. Analytical results shown are from the January 2014 monitoring event.
J – estimated value ≥ the method detection limit (MDL) and < the limit of quantitation (LOQ)

- TPHg and benzene removal rates using the GWET system have become asymptotic (Graphs 3 and 4).

A summary of the cumulative DPE system operational performance is presented below.

VAPOR-PHASE EXTRACTION DATA - CUMULATIVE

Soil Vapor Influent Flow Rate (average scfm)	139.5 scfm
Soil Vapor Mass Removal (lb TPHg/period)	13,918 lbs
Soil Vapor Mass Removal (lb Benzene/period)	138 lbs
Soil Vapor Mass Removal (lb MTBE/period)	102 lbs
Soil Vapor Extraction Period Operating Uptime (hours)	6,461.2 hours

DISSOLVED-PHASE EXTRACTION DATA - CUMULATIVE

Average Groundwater Extraction Rate (gpm)	0.80 gpm
Dissolved-Phase Mass Removal Rate (lb TPHg/period)	12.6 pounds
Dissolved-Phase Mass Removal Rate (lb Benzene/period)	1.3 pounds
Total Volume Groundwater Treated (gallons)	467,200 gallons
Groundwater Extraction Period Operating Uptime (hours)	9,678.8 hours

gpm – gallons per minute

3. Conclusions and Recommendations

- The DPE system was successful in extracting soil vapor and groundwater from the extraction wells at the site.
- Concentrations of dissolved hydrocarbons are one to three orders of magnitude lower than historical hydrocarbon concentrations and were reduced to the point that any remaining TPHg and benzene concentrations should be reduced through natural attenuation.
- At the current extraction rates of less than 17.9 pounds of TPHg and 0.2 pounds of benzene, continued operation of the remedial system is neither economically viable nor environmentally sustainable.
- The DPE system has operated in excess of one year.

Post Remedial Monitoring
The site groundwater monitoring wells are currently monitored quarterly. The second quarter monitoring and sampling event occurred on April 6, 2016. GHD recommends that the site be monitored for two more consecutive quarters to verify dissolved petroleum hydrocarbon concentration trends.

The system has met its effectiveness in remediating the site and operated for more than one year as stated in the low-threat closure policy (LTCP) and further operation of the remediation system is not warranted. Therefore, in addition to shutdown of the remediation system, GHD recommends that the system be properly removed from the site during the summer of 2016.

Please contact Judy Gilbert of GHD at (510) 420-3314, if you have any questions or comments.

Sincerely,
GHD

Matthew B. Smith, PE 82552

Notes and Abbreviations:

mm/dd/yy = month/day/year
Conc. = concentration
TPHg = total petroleum hydrocarbons quantified as gasoline
MTBE = methyl tertiary butyl ether
µg/L = micrograms per liter
<X.X = not detected at or below the detection limit indicated
a = pH measured in the field
J = estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
NM = Not meaured due to nondetect at MID-1

TPHg analyzed by EPA Method 8015M.
Benzene, toluene, ethylbenzene, and total xylenes analyzed by EPA Method 8260B.
MTBE analyzed by EPA Method 8260B.

					Total Extracted Volume (gal):	467,200	Pounds Removed:	0.76	12.6	Pounds Removed:	0.03	1.3	Pounds Removed:	0.0004	0.01
					Average Operational Flow Rate (gpm)[3]:	0.80	Gallons Removed[4]:	0.12	2.1	Gallons Removed[4]:	0.004	0.18	Gallons Removed[4]:	0.00007	0.002

Reporting Period: 1/21/2016 - 3/15/2016

Number of Days during Reporting Period	55	days
Gallons of Extracted Ground Water	77,670	gal
Average Flow Rate	1.02	gpm
Pounds of TPHg Removed	0.76	lbs
TPHg Removal Rate	0.01	lbs/day
Pounds of Benzene Removed	0.03	lbs
Benzene Removal Rate	0.000	lbs/day
Pounds of MTBE Removed	0.0004	lbs
MTBE Removal Rate	0.00001	lbs/day

Cumulative Results Since Start-up:

Number Days since Startup	550	days
Cumulative Total Gallons Extracted	467,200	gal
Average Flow Rate[3]	0.80	gpm
Cumulative Pounds of TPHg Removed	12.6	lbs
TPHg Removal Rate	0.02	lbs/day
Cumulative Pounds of Benzene Removed	1.3	lbs
Benzene Removal Rate	0.002	lbs/day
Cumulative Pounds of MTBE Removed	0.01	lbs
MTBE Removal Rate	0.00002	lbs/day

Formulas and Assumptions:

1. Hour meter readings taken at the end of the site visit
2. Mass Removed During the Period `
3. When concentration of individual parameters were not detected, the concentration was assumed to be half the detection limit for calculation purposes.
   Average Flow Rate = (Volume of Extracted Water (gal) / Number of Operational Days) * (60 minutes/hour) * (24 hours/day)
4. Gallons Removed = (Mass (lb) / Density (g/cc)) x 453.6 (g/lb) x (L/1000 cc) x (gal/3.785 L)
   Density: = 0.73 g/cc TPHg
   = 0.88 g/cc Benzene
   = 0.74 g/cc MTBE

Abbreviations:

TPHg = total petroleum hydrocarbons as gasoline
MTBE = methyl tertiary butyl ether
L = liter
gal = gallon
gpm = gallon per minute
µg/L = micrograms per liter
g = grams
cc = cubic centimeter
lb = pounds
--- = not applicable

Cumulative Results Since Startup:

Number Days Since Startup	**550 days**
Number of Hours Operated Since Startup	**6459 hours**

Abbreviations and Notes:

mm/dd/yy = month/day/year
hh:mm = hour : minute
inHg = inches of mercury
inH_2O = inches of water
°F = degrees Fahrenheit
acfm = actual cubic feet per minute
scfm = standard cubic feet per minute (flow in scfm = flow in acfm * [operating pressure{abs} / standard pressure {abs}] * [standard temperature {abs} / operating temperature {abs}])
% = percentage
INF-1 = pre-dilution system influent
INF-2 = post-dilution system influent
NM = not measured
LEL = Lower Explosive Limit
ppmv = parts per million by volume
PID = photo-ionization detector
FID = flame ionization detector
OVA = organic vapor analyzer
ppd = pounds per day
1. = INF-2 flow read from chart recorder. INF-2 pressure used to convert acfm to scfm.
2. = water in pipe; unable to measure accurate concentration/ LEL readings

GWE off from 7/4/2015 to 10/22/2015 for system repairs. GWE system temporarily off from 12/17/15 to 12/21/15 due to high holding tank alarm. Temporary shut-down between 12/25/15 to 12/26/15 due to unknown causes

Compliance:

BAAQMD Requirements:
Flow Rate < 300 scfm
Oxidizer Temperature > 600 degrees Fahrenheit in electric catalytic mode and > 1400 degrees in thermal catalytic mode
Benzene Emission Limit < 0.017ppd
Destruction Efficiency (measured as hexane)

98.50%	VOC >2,000 ppmv
97.00%	VOC >200 and <2,000 ppmv
90.00%	VOC < 200 ppmv

Note: If outlet VOC < 10 ppmv, destruction efficiency requirement is waived

Table 4
Dual Phase Extraction System

									Period Pounds Removed[9]:	**TPHg =**	**1,174**		**Benzene =**	**13.8**		**MTBE =**	**6.9**			
									Total Pounds Removed:	**TPHg =**	**13,912**		**Benzene =**	**138**		**MTBE =**	**101.5**			

Abbreviations:
mm/dd/yy = month/day/year
hh:mm = hours : minutes
TPHg = total petroluem hydrocarbons as gasoline
MTBE = methyl tertiary butyl ether
VOC = volatile organic compounds
ppmv = parts per million by volume
ppd = pounds per day
lb = pounds
ft^3 = cubic feet
scfm = standard cubic feet per minute

Abbreviations (continued):
INF-1 = pre-dilution system influent
INF-2 = post-dilution system influent
TBD = Sample taken during this time and are awaiting results
n/a = Not available due to SVE equipment malfunction

Notes:
1. TPHg, Benzene, and MTBE analyzed by EPA Method 8015/8020. Vapor samples were collected in 1-liter tedlar bags unless otherwise noted.
2. Molecular weight of TPHg assumed to be 100 lb/lb-mole as hexane.
3. Molecular weight of Benzene assumed to be 78 lb/lb-mole.
4. Molecular weight of MTBE assumed to be 88 lb/lb-mole.
5. Molecular weight of VOCs assumed to be 86 lb/lb-mole as hexane.
6. Removal/Emission Rate (ppd) = C (ppmv) x Q (scfm) x (1lb-mole/386ft^3) x MW (lb/lb-mole) x 60 min/hr x 24 hr/day x 10^{-6}
   C = concentration

BAAQMD Requirements:
Flow Rate < 300 scfm
Oxidizer Temperature > 600 deg Fahrenheit in electric catalytic mode and > 1400 degrees in thermal catalytic mode
Benzene Emission Limit < 0.017 ppd
Destruction efficiency (measured as hexane)
98.50% VOC >2,000 ppmv
97.00% VOC >200 and <2,000 ppmv
90.00% VOC < 200 ppmv
Note: If outlet VOC < 10 ppmv, destruction efficiency requirement is waived

Quality Control Summary

Client Name: ChevronTexaco
Reported: 02/22/2016 14:21

Group Number: 1629328

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

B - Analyte detected in the blank
C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Quality Control Summary

Client Name: ChevronTexaco
Reported: 03/14/2016 14:17

Group Number: 1637686

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

RL	Reporting Limit	**BMQL**	Below Minimum Quantitation Level
N.D.	none detected	**MPN**	Most Probable Number
TNTC	Too Numerous To Count	**CP Units**	cobalt-chloroplatinate units
IU	International Units	**NTU**	nephelometric turbidity units
umhos/cm	micromhos/cm	**ng**	nanogram(s)
C	degrees Celsius	**F**	degrees Fahrenheit
meq	milliequivalents	**lb.**	pound(s)
g	gram(s)	**kg**	kilogram(s)
µg	microgram(s)	**mg**	milligram(s)
mL	milliliter(s)	**L**	liter(s)
m3	cubic meter(s)	**µL**	microliter(s)
		pg/L	picogram/liter

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

B - Analyte detected in the blank
C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Emeryville CA 94608

Project Name: Castro Valley
Project #: 311950 2015.0 94.09
Workorder #: 1602077

Dear Ms. Judy Gilbert

The following report includes the data for the above referenced project for sample(s) received on 2/4/2016 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-3 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free the Project Manager: Kyle Vagadori at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kyle Vagadori

Project Manager

LABORATORY NARRATIVE
Modified TO-3
GHD
Workorder# 1602077

Two Client Tedlar Bag samples were received on February 04, 2016. The laboratory performed analysis for volatile organic compounds in air via modified EPA Method TO-3 using gas chromatography with photo ionization and flame ionization detection. The TPH results are calculated using the response of Gasoline. A molecular weight of 100 is used to convert the TPH ppmv result to ug/L. The method involves concentrating up to 200 mL of sample. The concentrated aliquot is then dry purged to remove water vapor prior to entering the chromatographic system.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	***TO-3***	***ATL Modifications***
Daily Calibration Standard Frequency	Prior to sample analysis and every 4 - 6 hrs	Prior to sample analysis and after the analytical batch </= 20 samples.
Initial Calibration Calculation	4-point calibration using a linear regression model	5-point calibration using average Response Factor
Initial Calibration Frequency	Weekly	When daily calibration standard recovery is outside 75 - 125 %, or upon significant changes to procedure or instrumentation
Moisture Control	Nafion system	Sorbent system
Minimum Detection Limit (MDL)	Calculated using the equation DL = A+3.3S, where A is intercept of calibration line and S is the standard deviation of at least 3 reps of low level standard	40 CFR Pt. 136 App. B
Preparation of Standards	Levels achieved through dilution of gas mixture	Levels achieved through loading various volumes of the gas mixture

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

The recovery of surrogate Fluorobenzene in sample INF was outside control limits due to high level hydrocarbon matrix interference. Data is reported as qualified.

Total Xylenes concentration is calculated by summing the individual concentrations of m,p-Xylene and O-Xylene.

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

LABORATORY NARRATIVE
Modified TO-3
GHD
Workorder# 1603064

Two 1 Liter Tedlar Bag samples were received on March 04, 2016. The laboratory performed analysis for volatile organic compounds in air via modified EPA Method TO-3 using gas chromatography with photo ionization and flame ionization detection. The TPH results are calculated using the response of Gasoline. A molecular weight of 100 is used to convert the TPH ppmv result to ug/L. The method involves concentrating up to 200 mL of sample. The concentrated aliquot is then dry purged to remove water vapor prior to entering the chromatographic system.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	***TO-3***	***ATL Modifications***
Daily Calibration Standard Frequency	Prior to sample analysis and every 4 - 6 hrs	Prior to sample analysis and after the analytical batch </= 20 samples.
Initial Calibration Calculation	4-point calibration using a linear regression model	5-point calibration using average Response Factor
Initial Calibration Frequency	Weekly	When daily calibration standard recovery is outside 75 - 125 %, or upon significant changes to procedure or instrumentation
Moisture Control	Nafion system	Sorbent system
Minimum Detection Limit (MDL)	Calculated using the equation DL = A+3.3S, where A is intercept of calibration line and S is the standard deviation of at least 3 reps of low level standard	40 CFR Pt. 136 App. B
Preparation of Standards	Levels achieved through dilution of gas mixture	Levels achieved through loading various volumes of the gas mixture

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

Total Xylenes concentration is calculated by summing the individual concentrations of m,p-Xylene and O-Xylene.

The recovery of surrogate Fluorobenzene in sample INF was outside control limits due to high level hydrocarbon matrix interference. Data is reported as qualified.

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Workorder #: 1603298

Dear Ms. Judy Gilbert

The following report includes the data for the above referenced project for sample(s) received on 3/16/2016 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-3 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free the Project Manager: Kyle Vagadori at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kyle Vagadori

Project Manager

LABORATORY NARRATIVE
Modified TO-3
GHD
Workorder# 1603298

One 1 Liter Tedlar Bag sample was received on March 16, 2016. The laboratory performed analysis for volatile organic compounds in air via modified EPA Method TO-3 using gas chromatography with photo ionization and flame ionization detection. The TPH results are calculated using the response of Gasoline. A molecular weight of 100 is used to convert the TPH ppmv result to ug/L. The method involves concentrating up to 200 mL of sample. The concentrated aliquot is then dry purged to remove water vapor prior to entering the chromatographic system.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	***TO-3***	***ATL Modifications***
Daily Calibration Standard Frequency	Prior to sample analysis and every 4 - 6 hrs	Prior to sample analysis and after the analytical batch </= 20 samples.
Initial Calibration Calculation	4-point calibration using a linear regression model	5-point calibration using average Response Factor
Initial Calibration Frequency	Weekly	When daily calibration standard recovery is outside 75 - 125 %, or upon significant changes to procedure or instrumentation
Moisture Control	Nafion system	Sorbent system
Minimum Detection Limit (MDL)	Calculated using the equation DL = A+3.3S, where A is intercept of calibration line and S is the standard deviation of at least 3 reps of low level standard	40 CFR Pt. 136 App. B
Preparation of Standards	Levels achieved through dilution of gas mixture	Levels achieved through loading various volumes of the gas mixture

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

The recovery of surrogate Fluorobenzene in sample INF was outside control limits due to high level hydrocarbon matrix interference. Data is reported as qualified.

Total Xylenes concentration is calculated by summing the individual concentrations of m,p-Xylene and O-Xylene.

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue
