Re: Sensitive Receptor Report
Delta Project No. C105484061
76 Service Station No. 5484
18950 Lake Chabot Road
Castro Valley, California

Dear Mr. Hwang:

This report has been prepared by Delta Environmental Consultants, Inc. (Delta) on behalf of ConocoPhillips Company (COP) to present the results of a sensitive receptor survey for the above referenced project site. Figure 1 shows the location with receptor search radius. The purpose for the survey was to (1) conduct a search for wells within one-half mile of the project site using the Department of Water Resources (DWR) database, and (2) generate a list of property owners within 1,000 feet of the site and determine by means of a questionnaire if any have receptors with potential for impact from contamination at the project site. Figure 2 shows project site facility details.

BACKGROUND

In June 1988, a leak was detected in the unleaded product system during an annual precision tank test. The Alameda County Health Care Services Agency requested and investigation be performed to document subsurface conditions. As a result, three monitor wells (MW-1 through MW-3) were installed in July, 1988. Approximately one foot of product was detected in one well MW-3 and wells MW-1 and MW-2 contained dissolved hydrocarbons above state action levels.

In October 1989, three additional monitoring wells (MW-4 through MW-6) were installed (MW-4 and MW-5 are offsite and MW-6 is onsite)

In June 1989, two gasoline Underground Storage Tanks (USTs) and one waste oil UST were removed from the site. During the removal, monitoring wells (MW-1 and MW-3) were property destroyed. Following their removal, the gasoline and waste oil UST pits were subsequently over-excavated in order to remove hydrocarbon-impacted soil. In the

A member of:

vicinity of the former fuel USTs, an area measuring approximately 60 feet by 70 feet was excavated to depths of 10 feet to 15 feet below ground surface (bgs). Hydrocarbon-impacted soil detected in the waste oil UST pit was also over-excavated to a depth of approximately 11 feet bgs. Following the excavation, approximately 1,900 cubic yards of soil was transported offsite for appropriate disposal. Soil samples collected from the sidewalls of the gasoline UST pit following over-excavation soil showed non-detectable levels (<2 parts-per-million) of total petroleum hydrocarbons as gasoline (TPH-G), except at the easterly sidewall, where access limitations prevented further lateral excavation. Additionally, three additional wells were installed offsite to further characterize hydrocarbon impacted soil and groundwater.

In November 1989, five additional borings (B-7 through B-11) were drilled to further evaluate to the extent of vertical and lateral hydrocarbon contamination.

In 1990, remediation options were evaluated for the site. Groundwater monitoring and risk analysis were concluded appropriate for the site. Soil vapor extraction (SVE) was determined infeasible due to the relatively impermeable soils and shallow bedrock at the site.

In June 1991, two additional borings were drilled in the southern portion of the site. Monitoring well MW-7 was installed in one of the borings.

In January 2005, four borings B-1, B-2, B-4, and B-5 were drilled during a baseline investigation at the site.

REMEDIAL ACTIVITIES

In 1989, approximately 1,900 cubic yards of soil was transported offsite for appropriate disposal.

GETTLER-RYAN SENSITIVE RECEPTOR SURVEY

A well search was conducted by Gettler-Ryan, Inc. (GR) in September 1988. Based on available driller's logs on file with the California Department of Water Resources (DWR) there are a number of wells located within one-quarter to one-half mile of the site and one well located within one-quarter mile of the site.

Based on the U.S. Geological Survey Topographic Map for this area (Santa Rosa quadrangle, photo revised 1980), the nearest surface water body is an unnamed drainage located approximately 2,000 feet north of the site. The drainage originates from a reservoir located approximately one mile to the northeast.

SENSITIVE RECEPTOR SURVEY

Delta personnel reviewed the public records of the Alameda County Assessors office to obtain a list of parcel numbers, property owner's names, and addresses of properties within a 1,000-foot radius of the site. A Public Health Assessment Questionnaire (Questionnaire) presenting specific queries regarding the presence of sensitive receptors was mailed to each property owner. A copy of the Questionnaire is shown in Attachment A. Two hundred fourteen questionnaires were mailed on April 25, 2006. Delta received 38 responses. Eight of the surveys were returned by the post office due to invalid addresses.

A well is present on eight of the respondent properties. Three properties have sumps used for irrigation purposes and basements are present on sixteen properties.

A list of the parcel numbers, property owner's names and property addresses with the responses to the returned questionnaire is presented in Table 1.

Delta also reviewed the public records of the Department of Water Resources to obtain a list of parcel numbers, property owner's names, and addresses of potential receptors within a one-mile radius of the site. Questionnaires were mailed to four addresses on June 1, 2006. None of the questionnaires were returned to Delta.

A list of the property owner's names, well numbers and property addresses is shown in Table 2.

Delta personnel searched for nearby schools, daycare centers, and hospitals within the 1,000-foot radius of the site. Chabot Elementary School is located approximately 470 feet southeast of the site. No hospitals, daycare centers or other schools were identified within the search radius.

CHARACTERIZATION STATUS

Concentrations of hydrocarbons in groundwater at the site are generally low and have been predominantly defined. Dissolved hydrocarbon concentrations have been present primarily in groundwater samples from monitoring well MW-7.

REMARKS

The recommendations contained in this letter/report represent Delta's professional opinions based upon the currently available information and are arrived at in accordance with currently acceptable professional standards. This letter/report is based upon a specific scope of work requested by the client. The Contract between Delta and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this report were performed. This letter/report is intended only for the use of Delta's Client and anyone else specifically listed on this letter/report. Delta will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Delta makes no express or implied warranty as to the contents of this letter/report.

If you have questions regarding this project, please contact Daniel Davis at (916) 503-1260.

Sincerely,
Delta Environmental Consultants, Inc.

Ben Wright

Public Health Assessment Questionnaire

PUBLIC HEALTH ASSESSMENT

April 25, 2006

SUBJECT: POTENTIAL FUEL CONTAMINATION IN THE VICINITY OF 18950 LAKE CHABOT ROAD, CASTRO VALLEY, CALIFORNIA

To Whom it May Concern:

Alameda County Health Agency (ACHA) staff has requested a list of receptors that could potentially be affected by fuel released from a service station located at the intersection of Quail Avenue and Lake Chabot Road in Castro Valley. The attached map shows the location of the service station in relation to your property. Please provide the information requested below in the space provided so we can demonstrate to the ACHA you have been contacted. Please complete only Section A if you do not have a well, basement, or a groundwater pumping system. It is permissible to write "unknown" if you simply do not know.

The results of this assessment will be used to determine if the water in your well or sump or air beneath/within your basement should be tested for the presence of fuel compounds. The testing would be free of charge and performed at your convenience. You will also receive a copy of the laboratory testing report. Please contact Ben Wright of Delta Environmental Consultants, Inc. (916-503-1263) or Don Hwang of the ACHA (510-567-6746) if you have questions or concerns regarding this questionnaire.

SECTION A

Name of property owner: _____

Owner address: _____

Owner telephone number (if a well, basement, or sump is present): _____

Name of tenant at property (if not owner occupied): _____

Is the property used for commercial or residential purposes? _____

Is the property occupied by a multi-family complex (e.g., apartment building)? _____

Is there a well on the property? _____

Is there a basement on the property? _____

Is there a sump on the property? _____

continued on next page

SECTION B (complete if a well exists at the subject site)

Number of Wells: _____ Well Diameter(s): _____

Well Depth(s): _____ Pump Depth(s): _____

Material used for the well casing: _____

Date(s) the well(s) were installed: _____

How frequently are the well(s) used? _____

Approximate gallons of water pumped during each well cycle: _____

What is the well water used for? _____

SECTION C (complete if you have a sump)

Frequency of Use: _____

Approximate gallons of water pumped from the sump each day: _____

Where is the sump water discharged? _____

Please return this questionnaire in the enclosed self-addressed stamped envelope as soon as possible. A second questionnaire will be mailed to your attention if we do not receive a response within two weeks. Again, please participate for your protection. We welcome any comments you may have on the bottom of this page.

Sincerely,

Delta Environmental Consultants, Inc.
