Castro Valley

2-15-00

Memo to file:

Gary Mulkey (CCI) called today to inform of the current status of (attempted) well installations.

Bedrock was reached @ shallow depth in the first boring this morning, although they were able to continue ~ 15' into rock to 25' BS. Mulkey reports that the cuttings are "bone dry" in this initial boring, the western-most boring of the 3 proposed. The two remaining borings will be completed closer to Lk. Chabot Rd.

I informed Mulkey that drilling to refusal is all that can be expected. Hopefully, the remaining borings will produce H₂O.
