Re: Second Quarter 2008 Ground-Water Monitoring Report
Former BP Station #11117, 7210 Bancroft Avenue, Oakland, California
ACEH Case # RO0000356

Dear Mr. Supple:

Attached is the *Second Quarter 2008 Ground-Water Monitoring Report* for Former BP Station #11117 located at 7210 Bancroft Avenue, Oakland, Alameda County, California (Site). This report presents a summary of the Second Quarter 2008 ground-water monitoring results and recent developments concerning the Site.

Should you have questions regarding the work performed or results obtained, please do not hesitate to contact us at (530) 566-1400.

Sincerely,

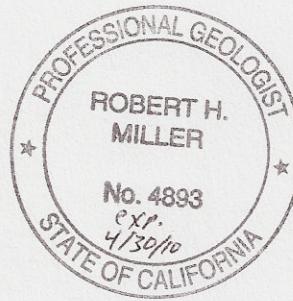

BROADBENT & ASSOCIATES, INC.

STATION #11117 QUARTERLY GROUND-WATER MONITORING REPORT

Facility: <u>#11117</u>	Address: <u>7210 Bancroft Avenue, Oakland, California</u>
Environmental Business Manager:	<u>Mr. Paul Supple</u>
Consulting Co./Contact Persons:	<u>Broadbent & Associates, Inc.(BAI)/Rob Miller & Tom Venus</u> <u>(530) 566-1400</u>
Consultant Project No.:	<u>06-08-649</u>
Primary Agency/Regulatory ID No.:	<u>Alameda County Environmental Health (ACEH)</u> <u>ACEH Case #RO0000356</u>
Facility Permits/Permitting Agency:	<u>NA</u>

WORK PERFORMED THIS QUARTER (Second Quarter 2008):

1. Prepared and submitted First Quarter 2008 Ground-Water Monitoring Report.
2. Conducted ground-water monitoring/sampling for Second Quarter 2008. Work performed by Stratus Environmental, Inc. (Stratus) on 22 May 2008.
3. Stratus met with PG&E regarding the electrical power drop and natural gas service to the Site on 4 June 2008. PG&E is in the process of evaluating the appropriate sources for electrical and gas service.
4. Stratus submitted a letter to PG&E requesting gas service at five pounds per square inch as asked for by PG&E during the 4 June 2008 on-site meeting.

WORK PROPOSED FOR NEXT QUARTER (Third Quarter 2008):

1. Prepared and submitted Second Quarter 2008 Ground-Water Monitoring Report (contained herein).
2. Conduct Third Quarter 2008 ground-water monitoring/sampling.
3. Continue DPE remediation system permitting and construction. Continue to provide monthly email updates of progress.

QUARTERLY RESULTS SUMMARY:

Current phase of project:	Ground-Water Monitoring/Sampling/DPE Treatment System Construction
Frequency of ground-water monitoring:	Quarterly: MW-1, MW-3, MW-4, MW-6, MW-7, MW-8, MW-9, MW-10, MW-11, EX-1, EX-2
Frequency of ground-water sampling:	Quarterly: EX-1, EX-2, MW-4, MW-7, MW-10, MW-11 Semi-annually (1Q and 3Q): MW-9 Annually (1Q): MW-1, MW-3, MW-6, MW-8
Is free product (FP) present on-site:	No
FP recovered this quarter:	None
Depth to ground water (below TOC):	16.31 ft (MW-1) to 19.05 ft (MW-10)
General ground-water flow direction:	Southeast
Approximate hydraulic gradient:	0.02 ft/ft

DISCUSSION:

Second Quarter 2008 ground-water monitoring and sampling was conducted at Station #11117 on 22 May 2008 by Stratus. Water levels were gauged in the 16 wells at the Site. Sheen was observed in well MW-4. No other irregularities were noted during water level gauging. Depth to water measurements ranged from 16.31 ft at well MW-1 to 19.05 ft at well MW-10. Resulting ground-water

surface elevations ranged from 22.91 feet above mean sea level in well MW-4 to 20.53 feet at well MW-9. Water level elevations were between historic minimum and maximum ranges for each well, as summarized in Table 1. Water level elevations yielded a potentiometric ground-water flow direction and gradient to the southeast at approximately 0.02 ft/ft, contrary to the general historical range of flow directions (see Table 3). Ground-water monitoring field data sheets are provided within Appendix A. Measured depths to ground water and respective ground-water elevations are summarized in Table 1. Potentiometric ground-water elevation contours are presented in Drawing 1.

Generally consistent with the current ground-water sampling schedule, water samples were collected from wells MW-4, MW-7, MW-10, MW-11, DPE-1 through DPE-5, EX-1, and EX-2. Wells DPE-1 through DPE-5, EX-1, and EX-2 were sampled this quarter to provide further analytical results to aid with the design and installation of the remediation system. No irregularities were reported during sampling. Samples were submitted under chain-of-custody protocol to Calscience Environmental Laboratories, Inc. (Garden Grove, California), for analysis of Gasoline Range Organics (GRO, C6-C12) by EPA Method 8015B; Benzene, Toluene, Ethylbenzene, and Total Xylenes (BTEX) by EPA Method 8260B; and Methyl tert-butyl ether (MTBE), Ethyl tert-butyl ether (ETBE), Ethanol, 1,2-Dichloroethane (1,2-DCA), 1,2-Dibromomethane (EDB), Di-isopropyl ether (DIPE), tert-Butyl alcohol (TBA), and tert-Amyl methyl ether (TAME) by EPA Method 8260B. No significant analytical irregularities were encountered during laboratory analysis of the samples. Ground-water sampling field data sheets and the laboratory analytical report, including chain-of-custody documentation, are provided in Appendix A.

Concentrations of GRO were detected above the laboratory reporting limit in ten of the eleven wells sampled at concentrations up to 130,000 micrograms per liter ($\mu\text{g/L}$) in well DPE-4. Benzene was detected above the laboratory reporting limit in eight of the eleven wells sampled at concentrations up to 9,700 $\mu\text{g/L}$ in well DPE-4. Toluene was detected above the laboratory reporting limit in eight of the eleven wells sampled at concentrations up to 26,000 $\mu\text{g/L}$ in well DPE-4. Ethylbenzene was detected above the laboratory reporting limit in nine of the eleven wells sampled at concentrations up to 5,000 $\mu\text{g/L}$ in well DPE-4. Total Xylenes were detected above the laboratory reporting limit in nine of the eleven wells sampled at concentrations up to 28,000 $\mu\text{g/L}$ in well DPE-4. TBA was detected above the laboratory reporting limit in three of the eleven wells sampled at concentrations up to 6,600 $\mu\text{g/L}$ in well MW-4. MTBE was detected above the laboratory reporting limit in eight of the eleven wells sampled at concentrations up to 4,900 $\mu\text{g/L}$ in well DPE-5. The remaining fuel additives and oxygenates were not detected above their laboratory reporting limits in the eleven wells sampled this quarter.

Detected analyte concentrations were within the historic minimum and maximum ranges recorded for each well with the following exceptions: Detected GRO, benzene, Ethylbenzene, total xylene and TBA concentrations in the sample collected from well DPE-1 reached historic maximum values of 16,000 $\mu\text{g/L}$, 3,900 $\mu\text{g/L}$, 510 $\mu\text{g/L}$, 1,700 $\mu\text{g/L}$, 4,400 $\mu\text{g/L}$, respectively; detected GRO, Ethylbenzene, and total xylene concentrations in the sample collected from well DPE-2 reached historic minimum values of 1,000 $\mu\text{g/L}$, 11 $\mu\text{g/L}$, and 18 $\mu\text{g/L}$, respectively; the detected ethylbenzene concentration in the sample collected from well DPE-3 reached a historic maximum value of 890 $\mu\text{g/L}$; detected ethylbenzene and total xylenes concentrations in the sample collected from well DPE-4 reached historic maximum values of 5,000 $\mu\text{g/L}$ and 28,000 $\mu\text{g/L}$, respectively; detected GRO, toluene, Ethylbenzene, total xylenes, and MTBE concentrations in the sample collected from DPE-5 reached historic minimum values of 34,000 $\mu\text{g/L}$, 620 $\mu\text{g/L}$, 2,600 $\mu\text{g/L}$, 6,000 $\mu\text{g/L}$, and 4,900 $\mu\text{g/L}$, respectively; detected benzene and ethylbenzene concentrations in the sample collected from well MW-11 reached historic maximum values of 80 $\mu\text{g/L}$ and 320 $\mu\text{g/L}$, respectively, and the total xylene concentration detected reached a historic minimum value of 150 $\mu\text{g/L}$. Historic laboratory analytical results are summarized in Table 1 and Table 2. A copy of the laboratory analytical report, including chain-of-custody documentation is provided in Appendix A. The most recent GRO, Benzene, and MTBE concentrations are also presented in Drawing 1. Drawing 2 presents a map showing approximate GRO iso-concentration contours. Drawing 3

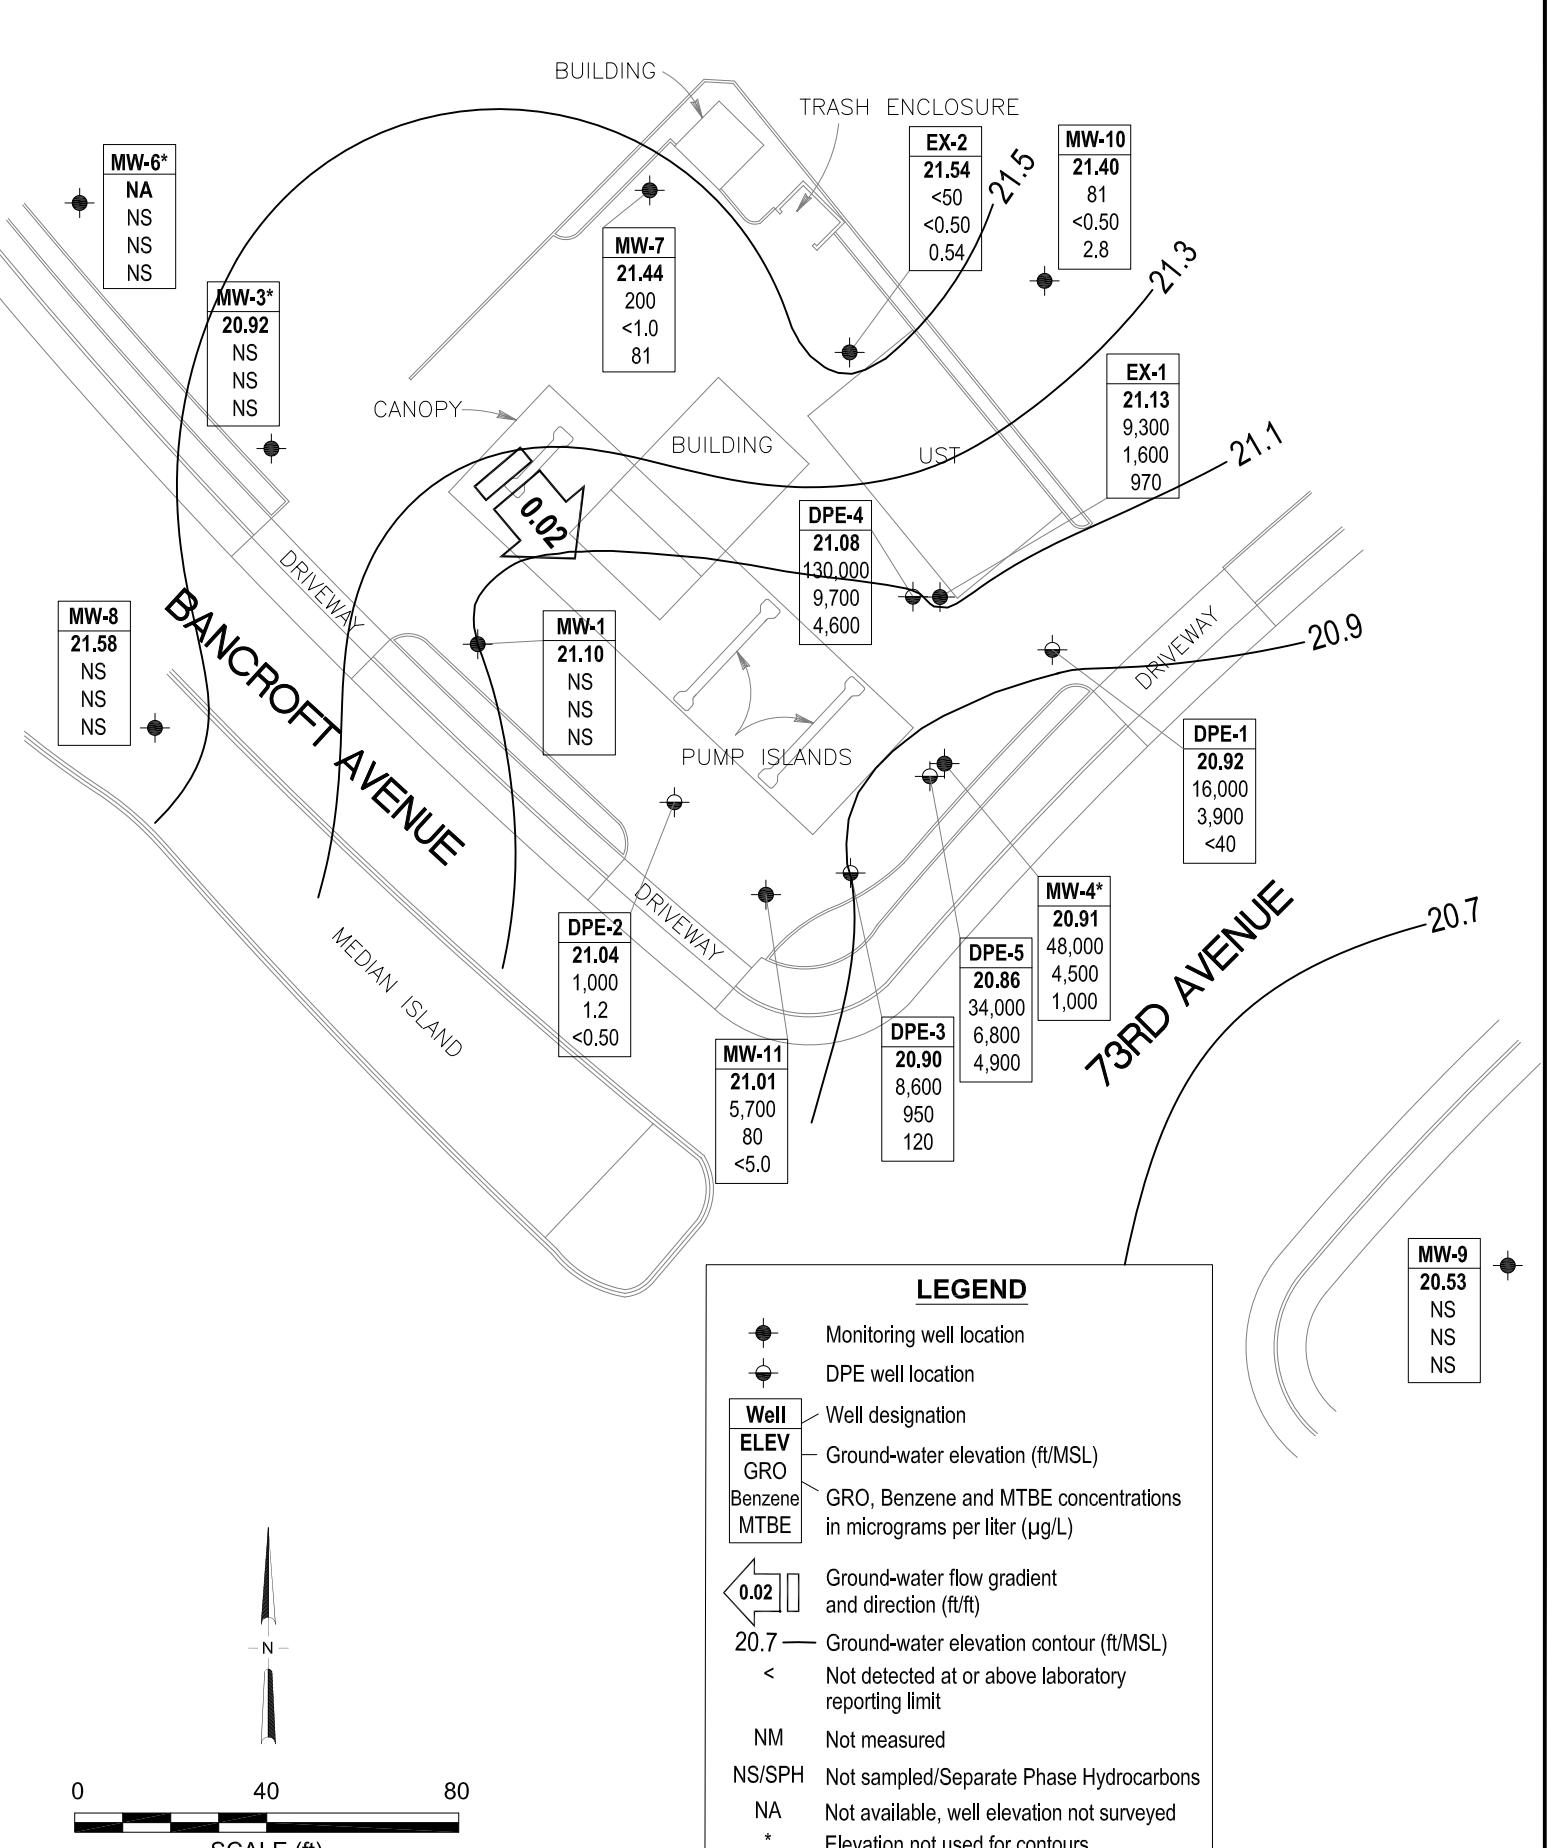

presents a map showing approximate Benzene iso-concentration contours. Drawing 4 presents a map showing approximate MTBE iso-concentration contours. Second Quarter 2008 ground-water monitoring data (GEO_WELL) and laboratory analytical results (EDF) were uploaded to the GeoTracker AB2886 Database. Upload confirmation pages have been provided in Appendix B.

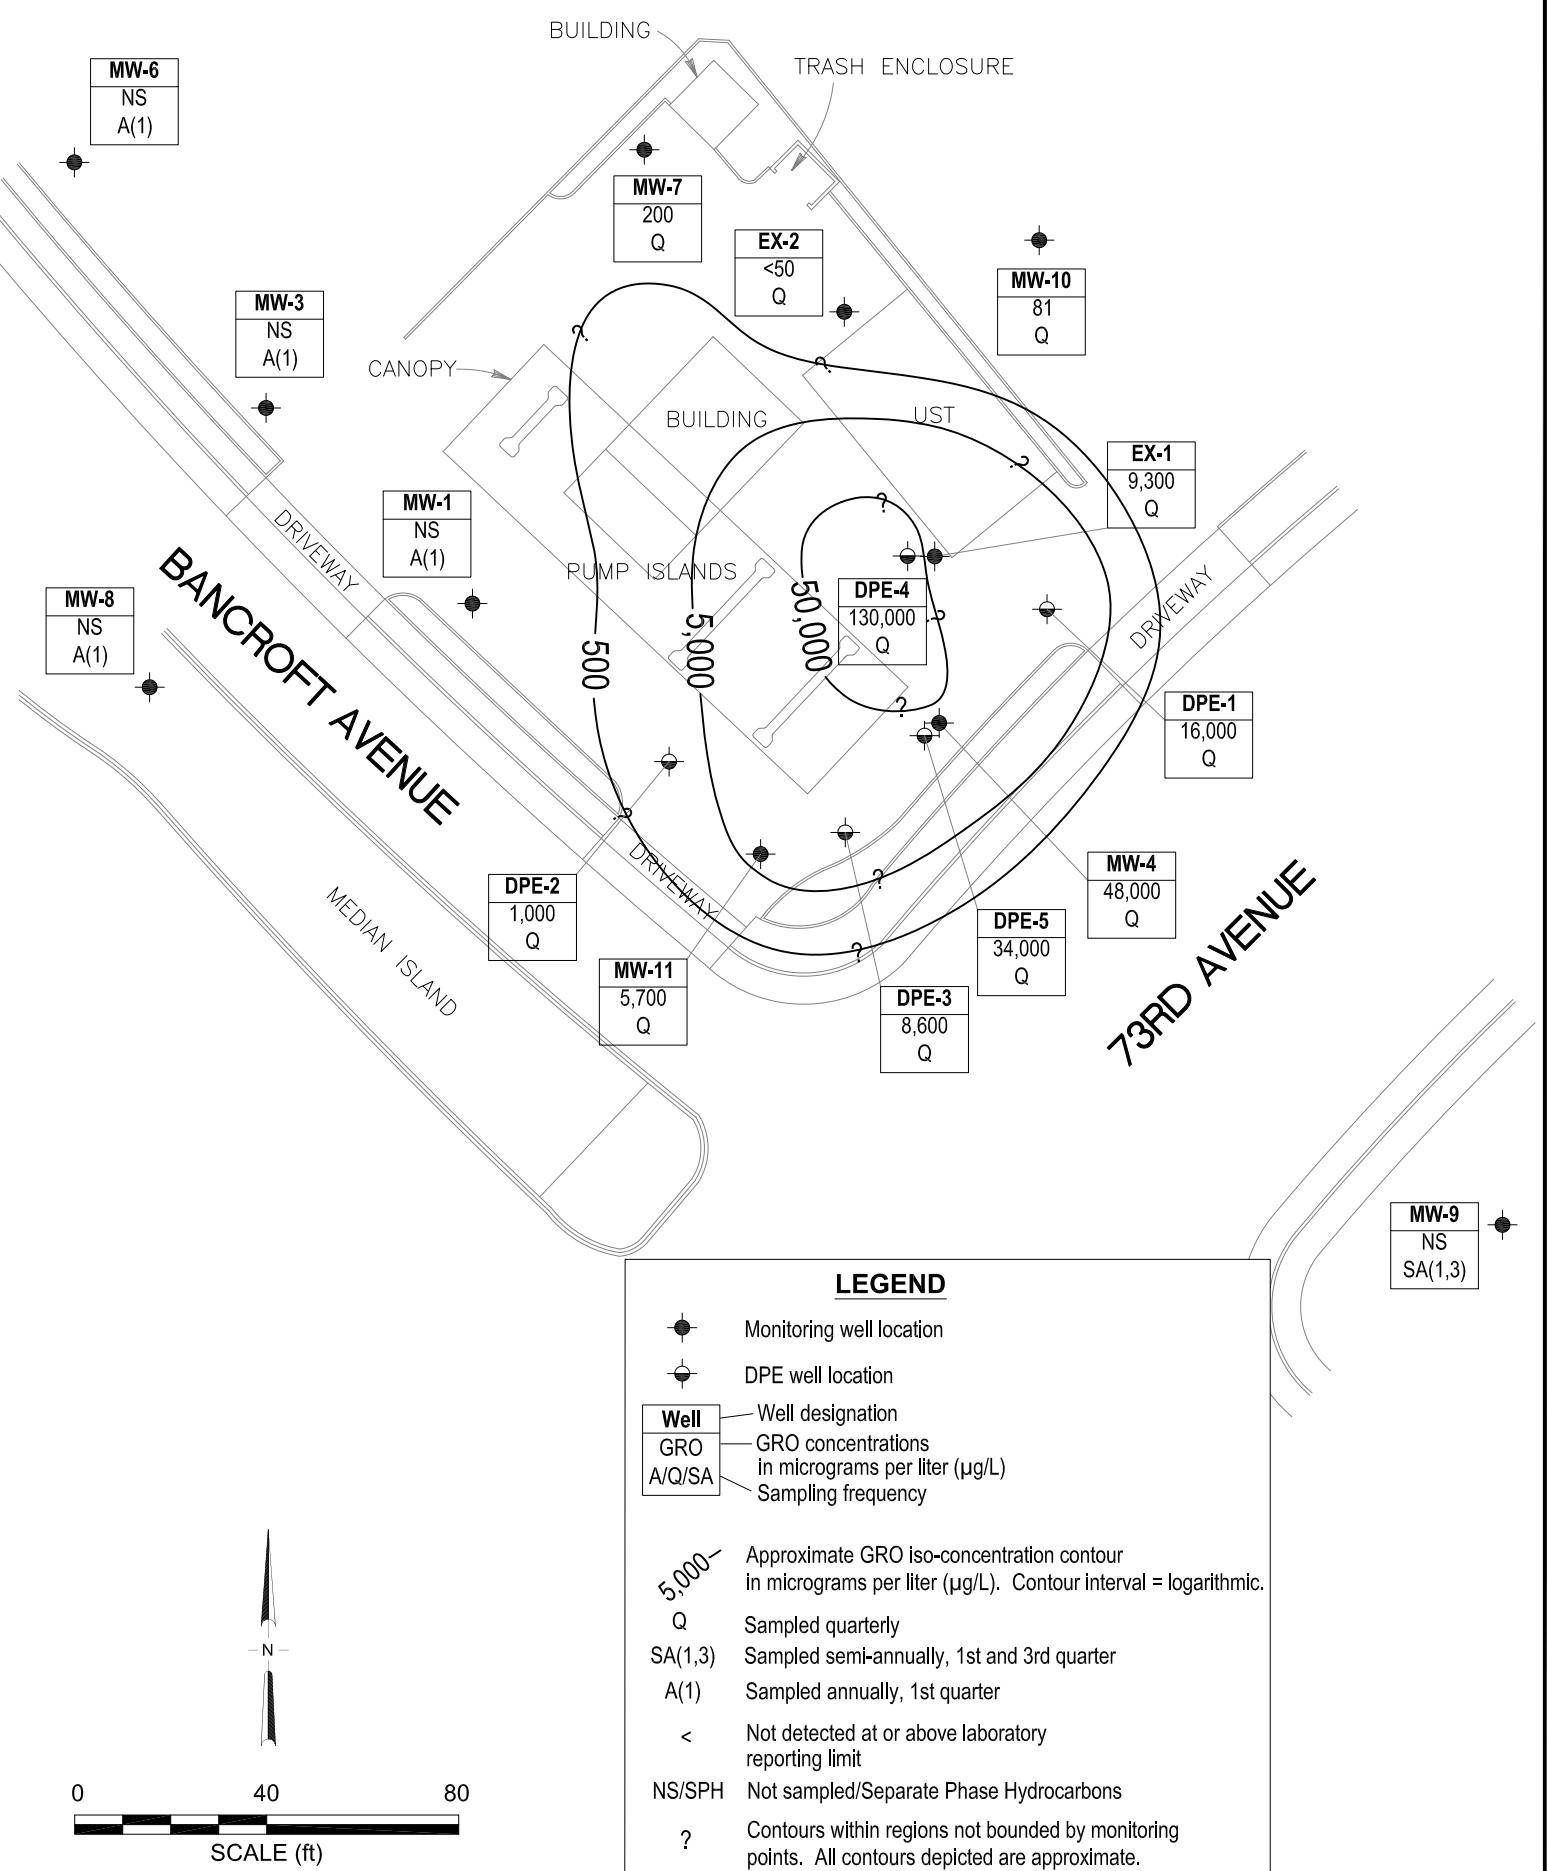

CLOSURE:

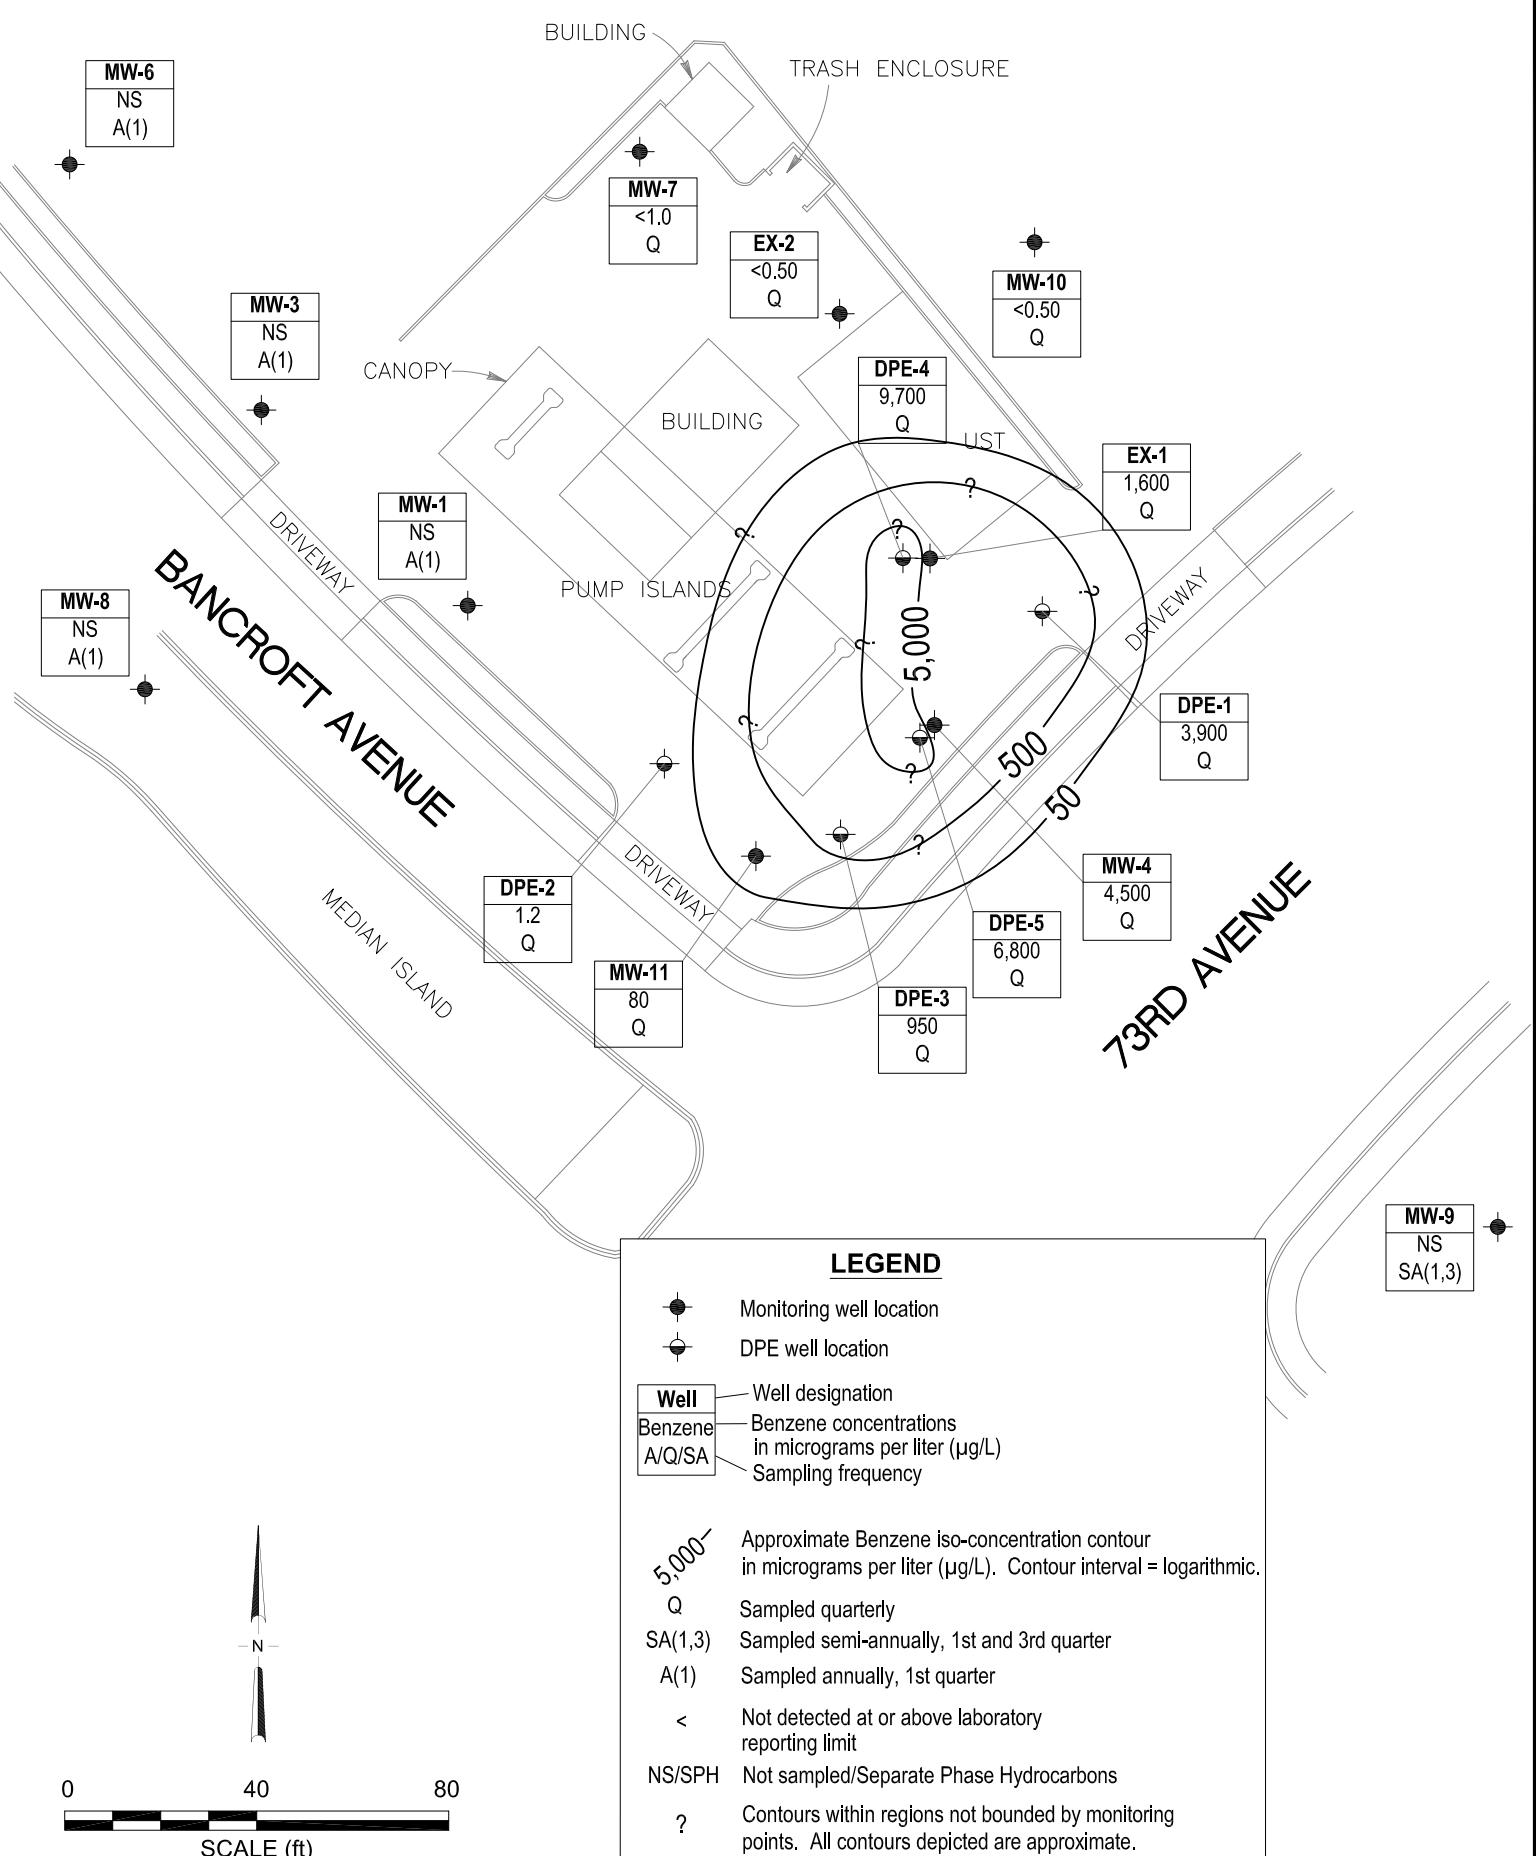

The findings presented in this report are based upon: observations of Stratus field personnel (see Appendix A), the points investigated, and results of laboratory tests performed by Calscience Environmental Laboratories (Garden Grove, California). Our services were performed in accordance with the generally accepted standard of practice at the time this report was written. No other warranty, expressed or implied was made. This report has been prepared for the exclusive use of Atlantic Richfield Company. It is possible that variations in soil or ground-water conditions could exist beyond points explored in this investigation. Also, changes in site conditions could occur in the future due to variations in rainfall, temperature, regional water usage, or other factors.

ABBREVIATIONS AND SYMBOLS:

< = Not detected at or laboratory reporting limit

--- = Not analyzed/applicable/measurable

µg/L = Micrograms per liter

ANA = Anamatrix, Inc.

ATI = Analytical Technologies, Inc.

DO = Dissolved oxygen

DTW = Depth to water in ft bgs

ft bgs = Feet below ground surface

ft MSL = Feet above mean sea level

GRO = Gasoline range organics

GWE = Groundwater elevation in ft MSL

mg/L = Milligrams per liter

MTBE = Methyl tert butyl ether

NP = Well not purged prior to sampling

P = Well purged prior to sampling

PACE = Pace, Inc.

SEQ/SEQM = Sequoia/Sequoia Morgan Hill Analytical

SPL = Southern Petroleum Laboratories

TOC = Top of casing in ft MSL

TPH-g = Total petroleum hydrocarbons as gasoline

FOOTNOTES:

c = Concentrations reported as diesel from MW-1, MW-2 and MW-4 are primarily due to the presence of a lighter petroleum product, possibly gasoline or kerosene.

d = Blind duplicate.

e = A copy of the documentation for this data is included in Appendix C of Alisto report 10-018-05-004.

f = Well not sampled due to presence of free product (FP).

g = Well inaccessible.

h = TOC not surveyed.

i = Travel blank.

j = EPA method by 8020\8260.

k = Samples ran outside of EPA recommended hold time.

l = A copy of the documentation for this data can be found in Blaine Tech Services report 010619-C-2. The MTBE data for the March 15, 1993 and June 7, 1993 events have been destroyed.

m = Thickness of SPH is only an estimate. The resulting GWE will not be used in contouring.

n = Samples analyzed by EPA Method 8260B for TPH-g, benzene, toluene, ethylbenzene, total xylenes, and fuel oxygenates.

o = Discrete peak @ C6-C7.

q = Discrete peak @ C5-C6.

r = Well was dry.

s = Sheen in well.

t = DTW and resulting GWE were anomalous and not used in groundwater contouring.

u = Anomalously low concentrations reported from Cambria. Do not appear to support historic trends.

v = Unable to locate well.

w = The hydrocarbon result for GRO was partly due to individual peaks in the quantitation range.

x = Initial analysis for MTBE within holding time but required dilution.

y = Sample > 4x spike concentration.

z = Site resurveyed on 3 December 2007.

aa = Well MW-2 was over-drilled and converted to well DPE-4 on 11/13/2007.

NOTES:

Casing elevations surveyed to the nearest 0.01 ft MSL.

GWE adjusted assuming a specific gravity of 0.75 for FP.

During the third quarter of 2002, URS Corporation assumed groundwater monitoring activities for BP.

Beginning in the fourth quarter 2003, the laboratory modified the reported analyte list. TPH-g was changed to GRO. The resulting data may be impacted by the potential of non-TPH-g analytes within the requested fuel range resulting in a higher concentration being reported.

Beginning in second quarter 2004, the carbon range for GRO was changed from C6-C10 to C4-C12.

Values for pH and DO are field measurements.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.

5/22/2008	<3,000	<100	<5.0	<5.0	<5.0	<5.0	<5.0	<5.0	

ABBREVIATIONS AND SYMBOLS:

-- = Not analyzed/applicable/measurable
< = Not detected above reported detection limit
1,2-DCA = 1,2-Dichloroethane
µg/L = Micrograms per Liter
DIPE = Di-isopropyl ether
EDB = 1, 2-Dibromoethane
ETBE = Ethyl tert-butyl ether
MTBE = Methyl tert-butyl ether
TAME = tert-Amyl methyl ether
TBA = tert-Butyl alcohol

FOOTNOTES:

a = The continuing calibration verification for ethanol was outside of client contractual acceptance limits. However, it was within method acceptance limits. The data should still be useful for its intended purpose.

b = Initial analysis for MTBE within holding time but required dilution.

c = Well MW-2 was over-drilled and converted to well DPE-4 on 11/13/2007.

NOTES:

All volatile organic compounds analyzed using EPA Method 8260B.

Note: The data within this table collected prior to April 2006 was provided to Broadbent & Associates, Inc. by Atlantic Richfield Company and their previous consultants. Broadbent & Associates, Inc. has not verified the accuracy of this information.

Re: Groundwater Sampling Data Package, BP Service Station No. 11117, located at
7210 Bancroft, Oakland, California.

General Information

Data Submittal Prepared / Reviewed by: Becky Carroll / Jay Johnson

Phone Number: (530) 676-6000

On-Site Supplier Representative: Tony Hill and Josh Slater

Sampling Date: May 22, 2008

Arrival: 05:30 *Departure:* 10:48

Weather Conditions: Clear

Unusual Field Conditions: None noted.

Scope of Work Performed: Quarterly monitoring and sampling.

Variations from Work Scope: A sheen was noted in well MW-4.

This submittal presents the tabulation of data collected in association with routine groundwater monitoring. The attachments include field data sheets, non-hazardous waste data form, chain of custody documentation, certified analytical results, and field procedures for groundwater sampling documentation. The information is being provided to BP-ARCO's Scoping Supplier for use in preparing a report for regulatory submittal. This submittal is limited to presentation of collected data and does not include data interpretation or conclusions or recommendations. Any questions concerning this submittal should be addressed to the Preparer/Reviewer identified above.

Sincerely,

STRATUS ENVIRONMENTAL, INC.

Jay R. Johnson, P.G.
Project Manager

Subject: **Calscience Work Order No.: 08-05-2133**
Client Reference: ARCO 11117

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 5/23/2008 and analyzed in accordance with the attached chain-of-custody.

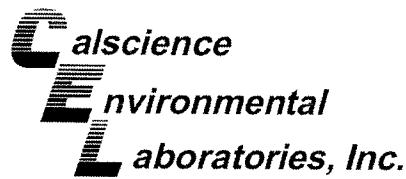

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

A handwritten signature in black ink that appears to read "Philip Sanelle for Linda Scharpenberg".

CASE NARRATIVE – 08-05-2133

Data Qualifiers - EPA 8260:

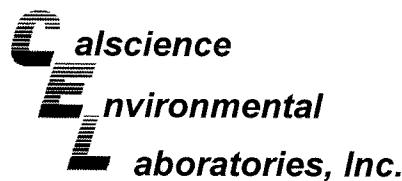

080529S01:

The % recover for MTBE was below acceptance criteria in the MSD. The % recoveries were within criteria in the LCS/LCSD. The MS/MSD has been flagged “3” within the report.

“3” = LN, AY

LN = MS and/or MSD below acceptance limits. See Blank Spike (LCS).

AY = Matrix Interference Suspected

RPD - Relative Percent Difference , CL - Control Limit

Glossary of Terms and Qualifiers

Work Order Number: 08-05-2133

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

FIELD PROCEDURES FOR GROUNDWATER SAMPLING

The sampling procedures for groundwater monitoring events are contained in this appendix.

Equipment Calibration

Standard groundwater sampling equipment – pH/Conductivity/Temperature meter, and dissolved oxygen (DO) meters are calibrated prior to all field work. All calibration is conducted in accordance with equipment manufacturer's recommended procedure and buffer solutions. MSDS for all buffer solutions are maintained in Stratus vehicles. Calibration is completed everyday prior to field work and also once a week. The pH probe is calibrated for a pH of 7.0 daily and for 4.0, 7.0 and 10.0 weekly. The conductivity probe is calibrated for 1413 μs daily and 1413 μs and 447 μs weekly. The temperature probe is calibrated weekly with a NIST-traceable thermometer. The DO probe is calibrated for 100% oxygen daily and 0% and 100% oxygen weekly. All calibration logs are maintained in the Stratus office.

Groundwater and Liquid-Phase Petroleum Hydrocarbon Depth Assessment

Prior to measuring the depth to liquid in the well, the well caps are removed and the liquid level allowed to stabilize. A water/hydrocarbon interface probe is used to assess the liquid-phase petroleum hydrocarbon (LPH) thickness, if present, and a water level indicator is used to measure the groundwater depth in monitoring wells that do not contain LPH. Depth to groundwater or LPH is measured from a datum point at the top of each monitoring well casing. The datum point is typically a notch cut in the north side of the casing edge. If a water level indicator is used, the tip is subjectively analyzed for hydrocarbon sheen.

Subjective Analysis of Groundwater

Prior to purging, a water sample is collected from the monitoring well for subjective assessment. The sample is retrieved by gently lowering a clean, disposable bailer to approximately one-half the bailer length past the air/liquid interface. The bailer is then retrieved, and the sample contained within the bailer is examined for floating LPH and the appearance of a LPH sheen.

Monitoring Well Sampling

In many cases, determining whether to purge or not to purge wells prior to sample collection is made in the field and is often based on depth to water relative to the screen interval of the well. Site-specific field data sheets present details associated with the purge method and equipment used.

Monitoring wells, when purged, use a pump or bailer until pH, temperature, and conductivity of the purge water has stabilized and a minimum of three well volumes of water has been removed. Field measuring equipment is calibrated and maintained according to the manufacturer's instructions. If three well volumes cannot be removed in one half hour's time the well is allowed to recharge to 80% of original level. After recharging, a groundwater sample is then collected from each of the wells using disposable bailers.

A Teflon bailer, electric submersible or bladder pump will be the only equipment used for well sampling. When samples for volatile organic analysis are being collected, the pump flow will be regulated at approximately 100 milliliters per minute to minimize pump effluent turbulence and aeration. Glass bottles of at least 40-milliliters volume and fitted with Teflon-lined septa will be used in sampling for volatile organics. These bottles will be filled completely to prevent air accumulation in the bottle. A positive meniscus forms when the bottle is completely full. A convex Teflon septum will be placed over the positive meniscus to eliminate air. After the bottle is capped, it is inverted and tapped to verify that it contains no air bubbles. The sample containers for other parameters will be filled, filtered as required, and capped. Glass and plastic bottles used by Stratus to collect groundwater samples are supplied by the laboratory.

Groundwater Sample Labeling and Preservation

Samples are collected in appropriate containers supplied by the laboratory. All required chemical preservation is added to the bottles prior to delivery to Stratus. Sample label information includes a unique sample identification number, job identification number, date, and time. After labeling, all groundwater samples are placed in a Ziploc® type bag and placed in an ice chest cooled to approximately 4° Celsius. Upon arriving at Stratus' office the samples are transferred to a locked refrigerator cooled to approximately 4° Celsius. Chemical preservation is controlled by the required analysis and is noted on the chain-of-custody form. Trip and temperature blanks supplied by the laboratory accompany the groundwater sample containers and groundwater samples.

Sample Identification and Chain-of-Custody Procedures

Sample identification and chain-of-custody procedures document sample possession from the time of collection to ultimate disposal. Each sample container submitted for analysis has a label affixed to identify the job number, sampler, date and time of sample collection, and a sample number unique to that sample. This information, in addition to a description of the sample, field measurements made, sampling methodology, names of on-site personnel, and any other pertinent field observations, is recorded in the field records. The samples are analyzed by a California-certified laboratory.

A chain-of-custody form is used to record possession of the sample from time of collection to its arrival at the laboratory. When the samples are shipped, the person in custody of them relinquishes the samples by signing the chain-of-custody form and noting the time. The sample-control officer at the laboratory verifies sample integrity and confirms that the samples are collected in the proper containers, preserved correctly, and

contain adequate volumes for analysis. These conditions are noted on a Laboratory Sample Receipt Checklist that becomes part of the laboratory report upon request.

If these conditions are met, each sample is assigned a unique log number for identification throughout analysis and reporting. The log number is recorded on the chain-of-custody form and in the legally-required log book maintained by the laboratory. The sample description, date received, client's name, and other relevant information is also recorded.

Equipment Cleaning

All reusable sampling equipments are cleaned using phosphate-free detergents and rinsed with de-ionized water.
