Subject: RE: RO 357 Snow Cleaners Proposed Creek Sample Collection Locations

Paul,

The proposed creek sampling is acceptable. Please include the results as part of the upcoming technical report.

Regards,

Jerry Wickham

Subject: RO 357 Snow Cleaners Proposed Creek Sample Collection Locations

Hi Jerry,

As we discussed on 7/15/08 following the 7/14/08 evening community meeting, I have attached a pdf copy of a map showing proposed creek surface water sample collection locations C1 through C3 (document 0298 Proposed Creek Surface Water Sample Locations.pdf). Sampling of the creek was requested by community members during the community meeting. Location C1 is located upstream of anticipated areas of potential impact to the creek. Location C2 is located in a portion of the stream between creek bank borehole locations B26 and B27, which is the anticipated area of potential impact to the creek. Location C3 is located in the stream immediately downstream of Davis Street at a location that is anticipated to be downstream from potential areas of impact to the creek. All samples will be collected into clean glass bottles obtained from the laboratory and will be preserved with hydrochloric acid. The bottles will be labeled and stored in a cooler with ice pending delivery to the laboratory. Chain of custody procedures will be observed for all sample handling. The samples will be analyzed for Total Petroleum Hydrocarbons as Gasoline, Stoddard Solvent and Bunker Oil and for EPA Method 8260B compounds on a normal (5 business day) turn around basis. I will forward the results to you once they are received from the laboratory.

Should you have any questions, please do not hesitate to contact me. Thank you!

Best Regards.

Paul King
