## Wickham, Jerry, Env. Health

From: Sent: To: Subject: Attachments: PDKing0000@aol.com Thursday, July 17, 2008 12:26 AM Wickham, Jerry, Env. Health RO 357 Snow Cleaners Borehole Groundwater Sample Results 0807239.pdf

Hi Jerry,

You will find attached the laboratory report for the water sample results that we have received to date from the laboratory for the recent subsurface investigation at and near the subject site (document 0807239.pdf). Review of the results shows the following notable conditions for the offsite sample results.

o B25 groundwater grab sample results show that all analytes were not detected. B25 was located in the driveway of Marion Puck-Escobar. We retained soil samples at 5-foot intervals from the borehole and have the samples on HOLD at the laboratory. The work plan only proposed that a groundwater sample be analyzed at this location. Based on the absence of detected analytes in the groundwater at this location, I recommend that the soil sample hold times be allowed to expire and that the soil samples not be analyzed.

o B27 groundwater grab sample was collected at a depth of approximately 3 feet below the ground surface on the exterior of the channelized creek. The depth of sample collection was approximately coincident with the bottom of the channelized creek. Weep holes were present in the walls of the channelized creek, and water was observed to be weeping from all of the weep holes. No HVOCs were detected in the sample from the borehole. Similarly, no TPH-G or Stoddard solvent were detected in the water sample. However, oil-range compounds were detected. The absence of HVOCs and Stoddard solvent suggest that the oil-range compounds are not related to the Snow Cleaners case.

o B26 groundwater grab sample results show that TPH-G-range compounds were detected, in addition to Stoddard solvent and low concentrations of cis-1,2-DCE and vinyl chloride. The sample was collected from the creek bank from one of the few, short sections of the creek bank between Davis Street and Henrietta Street that is unlined. I recommend collecting additional groundwater grab samples from upstream portions of the creek bank that are not lined to determine if the presence of the detected compounds is limited to the vicinity of borehole B26.

Please call me at your earliest convenience to discuss the sample results. Thank you!

#### WorkOrder: 0807239

July 16, 2008

Dear Steve:

Enclosed within are:

- 1) The results of the **5** analyzed samples from your project: **#0298; Snow Cleaners- Oakland,**
- 2) A QC report for the above samples,
- 3) A copy of the chain of custody, and
- 4) An invoice for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing

McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius Laboratory Manager McCampbell Analytical, Inc.

	eans not detected at or ve the reporting limit	S	NA	NA	mg	y/Kg						

\* water and vapor samples and all TCLP & SPLP extracts are reported in ug/L, soil/sludge/solid samples in mg/kg, wipe samples in µg/wipe, product/oil/non-aqueous liquid samples in mg/L.

# cluttered chromatogram; sample peak coelutes with surrogate peak.

+The following descriptions of the TPH chromatogram are cursory in nature and McCampbell Analytical is not responsible for their interpretation:

b1) aqueous sample that contains greater than ~1 vol. % sediment

b6) lighter than water immiscible sheen/product is present

d5) TPH pattern that does not appear to be derived from gasoline (stoddard solvent / mineral spirit?)

d9) no recognizable pattern

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 \* (MS-Sample) / (Amount Spiked); RPD = 100 \* (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not enough sample to perform matrix spike and matrix spike duplicate.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

Laboratory extraction solvents such as methylene chloride and freon 113 may occasionally appear in the method blank at low levels.
