Stephen,  
Welcome back.

Thanks for the clarification; your proposed approach is appropriate at the site.

Mark:

Per your letter of March 28, 2012, Stratus will modify the groundwater monitoring and sampling schedule for this site to include all wells (MW-1 through MW-8) in the first semiannual event, and wells MW-1 through MW-4 during the second semiannual event.

With regards to the analytical suite, all wells were analyzed for oil range organics (ORO, C22-C40+) during the 4<sup>th</sup> quarter 2011 event; no ORO were reported in any of the samples. You don't specifically reference the ORO in your letter, but your letter of June 23, 2011 requested analysis of ORO for one year. We will include ORO in the analytical suite for the first sampling event of 2012, then discontinue (assuming data does not indicate otherwise). Please advise if you intended otherwise.

The next sampling event (currently scheduled for April 26, 2012) will include analysis of the sample from well MW-2 for diesel range organics (DRO, C13-C22), with and without the silica gel cleanup. Continued inclusion of DRO will be evaluated based on the results from this sampling event. During this sampling event, all wells will be analyzed for gasoline range organics (GRO), BTEX, oxygenates, 1,2-DCA, EDB, naphthalene, and other VOCs.

The requested work plan is in the final review stage, and should be uploaded to your server shortly.
