UNDERGROUND STORAGE TANK REMOVAL AND REMEDIAL ACTION REPORT

**Peralta Community College District Maintenance Yard
501 5th Avenue
Oakland, California**

1.0 INTRODUCTION

ACC Environmental Consultants, Inc., (ACC) was retained by Peralta Community College District to perform, manage, and document underground storage tank (UST) removal and remedial action activities at Peralta Community College District Maintenance Yard, 501 5th Avenue, Oakland, California (Figure 1).

2.0 BACKGROUND

Five underground storage tanks (USTs) were installed at the subject property prior to the 1960s. The tanks were used for storage of fuel and waste oil for the City of Oakland Corporation Yard. The tanks consisted of two 6,000-gallon gasoline tanks, one 2,000-gallon diesel tank, one 2,000-gallon ethyl (premium) gasoline tank, and one 550-gallon waste-oil tank. In 1980, the District acquired the property. The District abandoned the five USTs by filling them with water and installed three new fiberglass USTs. The new tanks consisted of two 6,000-gallon and one 4,000-gallon fiberglass tanks used to store gasoline fuel. The new tanks were installed approximately 150 feet from the original tanks.

2.1 UST Removal

In 1992, the five original USTs were removed by R.S. Eagan. During removal, eight soil samples and one grab groundwater sample were collected from the excavation. Laboratory analysis of the soil samples indicated concentrations up to 228 parts per million (ppm) total petroleum hydrocarbons as diesel (TPHd), 134 ppm total petroleum hydrocarbons as gasoline (TPHg), 2.407 ppm benzene, 4.617 ppm toluene, 7.170 ppm ethylbenzene, 6.147 ppm total xylenes, and 5,477 ppm oil and grease. Laboratory analysis of the water sample collected from the excavation indicated concentrations of 170,000 parts per billion (ppb) TPHd, 15,000 ppb TPHg, 286 ppb benzene, 698 ppb toluene, 300 ppb ethylbenzene, 808 ppb total xylenes, and 284,000 ppb oil and grease.

2.2 Previous Assessments

In September 1992, a preliminary study was performed by Environ of Emeryville, California, to evaluate soil and groundwater conditions at the site and at neighboring sites as part of a due diligence investigation associated with the sale of the property. This study indicated that hydrocarbon constituents reported in the soil and grab groundwater samples at the District Maintenance Yard were possibly a result of regional impact.

In November 1992, ACC performed a subsurface environmental site assessment of the soil around the former tank excavation. Concentrations of TPHg and motor oil were detected in the soil and groundwater samples collected from the borings. Laboratory analysis of the soil samples indicated concentrations up to 370 ppm TPHg, 12 ppm TPHd, 5,342 ppm motor oil, 76.94 ppm benzene, 73.9 ppm toluene, 30.4 ppm ethylbenzene, and 95.41 ppm xylenes.

In November 1993, the three fiberglass gasoline USTs were removed from the property. Soil samples collected from the excavation indicated concentrations up to 1.3 ppm TPHg, 0.019 ppm benzene, and 0.018 ppm toluene. Initial groundwater samples collected from the excavation indicated 27,000 ppb TPHg, 1,200 ppb benzene, 5,100 ppb toluene, 690 ppb ethylbenzene, and 5,700 ppb xylenes. During removal of the tanks, approximately 3,500 gallons of water were removed from the excavation. Analysis of subsequent groundwater samples from the excavation indicated concentrations of 210 ppb TPHg and 14 ppb xylenes. Due to the detectable levels of constituents reported in the soil and groundwater samples, additional groundwater investigation was requested by the Alameda County Health Care Services Agency (ACHCSA).

In February 1994, four additional borings were drilled on site and converted into 2-inch-diameter monitoring wells (MW-1, MW-2, MW-3, and MW-4). The monitoring wells were used to evaluate the extent of groundwater impact from the two former excavations (Figure 2). Laboratory analysis of the groundwater samples collected in February 1994 from monitoring wells MW-1 and MW-4 (downgradient from the tank excavations) indicated no detectable levels of the constituents evaluated. The groundwater results from monitoring well MW-1 indicated a downgradient extent of groundwater impact. Laboratory analysis of groundwater samples collected from monitoring wells MW-2 and MW-3 (upgradient of the former tank excavations) indicated detectable levels of constituents. Groundwater samples collected from borings MW-2 and MW-3 indicated detectable levels of TPHd, TPHg, and benzene, toluene, ethylbenzene, and total xylenes (BTEX). Motor oil was reported in the soil sample collected from boring MW-2. However, motor oil was not detected in the groundwater sample collected from monitoring well MW-2. A concentration of TPHd was detected only in the soil sample from boring MW-2.

An additional soil and groundwater investigation was conducted on May 9, 1994, to evaluate possible upgradient sources of petroleum hydrocarbons on site. The investigation included drilling five borings upgradient (east) of existing monitoring wells MW-2 and MW-3. Laboratory analysis of the soil samples collected during the additional investigation indicated detectable concentrations of TPHd up to 11 ppm and motor oil up to 100 ppm. No detectable concentrations of TPHg or BTEX were reported in the soil samples analyzed. Groundwater was encountered at a depth of approximately 5 to 6 feet below ground surface (bgs) during the additional investigation. Laboratory analysis of grab groundwater samples collected from the boreholes indicated no detectable concentrations of TPHd, motor oil, or BTEX. A concentration of TPHg of 61 ppb was reported in one grab groundwater sample collected from one boring. Motor oil was not detected in the groundwater samples collected from the borings and monitoring wells. Results of the analytical data from previous investigations indicate that upgradient sources of TPHg and motor oil exist. Fine-grained fill material and Bay Mud appear to restrict the mobility of the petroleum hydrocarbons from impacting groundwater; however, groundwater flow direction data suggest that constituent movement is to the west, away from monitoring wells MW-2 and MW-3.

2.3 Interim Remedial Action

Based on the findings of the subsurface investigations, elevated concentrations of petroleum hydrocarbons in the soil and groundwater indicated that a source of impact still existed on site. To remediate the source, overexcavation of the area around the former tank excavation was recommended as a cost-effective means. The proposed scope of work, approved by the lead regulatory agency, ACHCSA, included excavating impacted soil in the vicinity of the former tank excavation, actively purging impacted groundwater during excavation, and destroying well MW-2 during excavation activity.

Interim remedial action as overexcavation of impacted soil around the former tank excavation (removed in 1992) was performed in the summer of 1995. The work consisted of overexcavation and removal of approximately 2,250 cubic yards of impacted soil and removal of approximately 14,888 gallons of excavation water. During soil removal, four previously unknown USTs were discovered, three of which were removed. In order to protect the adjacent portable building's integrity, the fourth UST was not removed at the time of remedial action.

Based on previous investigations conducted on site, the extent of impact in the soil and groundwater was in the immediate vicinity of former monitoring well MW-2 and the existing UST, adjacent to the portable buildings. Due to the findings of the interim remedial action and the existence of previously unknown USTs, groundwater monitoring of the existing three wells (MW-1, MW-3, and MW-4) was reinstated after the interim remedial action.

3.0 PREPARATION

In preparation for the removal of the fourth UST and excavation activity, well MW-3 was destroyed on March 18, 1998 by Gregg Drilling & Testing, Martinez, California, (license C57-485165).

Before conducting the remedial action, appropriate notifications and permits were submitted as required, including the East Bay Municipal Utility District, Wastewater Discharge Permit number 5039069. A copy of the permit is attached as Appendix 1. Prior to UST removal, the portable buildings that had been adjacent to the UST location were relocated.

4.0 FIELD ACTIVITIES

4.1 UST Removal

UST excavation work began on September 1, 1998. The UST removal and backfill work was performed by state licensed contractor Remedial Solutions, Inc. (RSI) under contractor's license number A634555, in accordance with regulatory requirements. ACC documented the subsurface work during the UST removal and closure procedures. The work was observed by Mr. Leroy Griffin of the Oakland Fire Services Agency.

Prior to the UST removal, approximately 8,000 gallons of water were pumped from the UST and the surrounding soil into the Baker Tank on site. The top of the UST and product lines were found approximately 5.0 feet below ground surface (bgs). The bottom of the UST sat at a depth of approximately 12.0 feet bgs.

On September 4, 1998, personnel from RSI added approximately 40 pounds of dry ice to inert the UST prior to removal. The UST was removed with the use of a backhoe. Upon removal, the UST was found to be constructed of single-walled riveted steel and in poor condition. The UST was observed to have numerous holes on the sides and the bottom. The UST was loaded onto a truck and hauled by Erickson, Inc., Richmond, California under manifest number 974055 for disposal. Once transported to the Erickson facility, the UST was cleaned and rendered harmless. A copy of the UST manifest and the Certificate of Destruction from Erickson, Inc. is included in Appendix 2.

The soil observed within the excavation consisted of sand and sandy clays. During removal of the UST, indications of impact (i.e., odor or discoloration) were observed in the soil in the excavation.

After removal of the UST, four soil samples were collected at approximately 7.0 feet bgs, one on each sidewall of the excavation to determine whether overexcavation of the UST pit was necessary (2X98W7.0TANK, 2X98N7.0TANK, 2X98E7.0TANK, and 2X98S7.0TANK). The samples were obtained for analysis with the use of an excavator. After the soil was collected with the excavator bucket, a sampling tube was pushed into the least disturbed portion (between the teeth of the bucket). After collection, all the samples were covered immediately with Teflon[®] sheeting and tight fitting plastic end caps. The samples were then labeled and preserved in a pre-chilled, insulated cooler pending submittal to Chromalab, Inc. (Chromalab) a state-certified analytical laboratory, following proper chain of custody protocol.

The samples were analyzed for of total extractable petroleum hydrocarbons (TEPH) as kerosene, diesel, and motor oil by EPA Method 8015 and TPHg, BTEX, and methyl tertiary butyl ether (MTBE) by EPA Method SW846 8020A Nov 1990/8015Mod. A summary of the laboratory analytical results is presented in Tables 1 and 2. A copy of the laboratory analytical results and chain of custody record is included in Appendix 3.

4.2 Overexcavation

Overexcavation and UST removal work was conducted concurrently. The overexcavation and backfill work was performed in accordance with regulatory requirements. ACC collected subsurface soil and groundwater samples and documented the subsurface work during the remedial action.

Overexcavation in the vicinity of former monitoring well MW-3 began on September 3, 1998. The work included removing the asphalt cover and excavation of impacted soil. Below the asphalt surface, the soil appeared discolored and had an odor of petroleum hydrocarbons. Excavation in this area was extended to 12 feet bgs, into light brown soil in order to remove the highly impacted soil. Groundwater was encountered in the excavation at approximately 5 feet bgs.

To evaluate remedial action, verification soil samples were collected at approximately 7.5 feet bgs, one on each side of the excavation (1X98N7.5, 1X98E7.5, 1X98S7.5, and 1X98W7.5). An additional verification sample (1X98W8.0A) was collected on September 8, 1998 after additional excavation was completed. The samples were obtained for analysis with the use of an excavator. After collection, all the samples were covered immediately with Teflon[®] sheeting and tight fitting plastic end caps. The samples were then labeled and preserved in a pre-chilled, insulated cooler pending submittal to Chromalab following proper chain of custody protocol.

The samples were analyzed for TEPH as kerosene, diesel, and motor oil, and TPHg, BTEX, and MTBE. A summary of the laboratory analytical results is presented in Tables 1 and 2. A copy of the laboratory analytical results and chain of custody record is included in Appendix 3.

Soil removed during excavation was stockpiled on site pending analysis and profiling for transport and recycling. Upon completion of soil removal, the excavation measured 60 feet by 30 feet by 11 to 12 feet deep. The approximate extent of the final excavation is illustrated on Figure 2.

The former UST pit was approximately 40 feet by 50 feet by 7.5 feet deep before additional excavation was performed. Soil overexcavation in the UST pit was conducted from September 8 to 10, 1998. Verification samples were collected along the four sidewalls at a depth of approximately 7 feet bgs throughout the excavation work. Samples were collected as additional soil was removed to determine the extent of excavation necessary to remove impacted soil. Confirmation sample locations are indicated on Figure 3. The excavation samples were obtained for analysis with the use of an excavator. After collection, all the samples were covered immediately with Teflon[®] sheeting and tight fitting plastic end caps. The samples were then labeled and preserved in a pre-chilled, insulated cooler pending submittal to Chromalab following proper chain of custody protocol.

The samples were analyzed for TEPH as kerosene, diesel, and motor oil, and TPHg, BTEX, and MTBE. A summary of the laboratory analytical results is presented in Tables 1 and 2. A copy of the laboratory analytical results and chain of custody record is included in Appendix 3.

Approximately 1,104 cubic yards (1,876 tons) of impacted soil was removed from the excavation. The final excavation limits are illustrated on Figure 2.

TABLE 1 - VERIFICATION SOIL SAMPLE ANALYTICAL RESULTS (TEPH)

Sample ID	Date Sampled	Kerosene (mg/kg)	Diesel (mg/kg)	Motor Oil (mg/kg)

Notes: mg/kg = milligrams per kilogram = ppm

4.3 Stockpile Sample Collection

During the UST removal, soil was generated and stockpiled on site and covered with plastic sheeting. Four composite soil samples (SP-1,2,3,4; SP-5,6,7,8; SP-9,10,11,12; and SP-13,14,15,16) consisting of four discrete samples each were collected from the stockpile material. Samples were obtained from random, representative locations in the stockpiled material by removing approximately 1 foot of overburden, then pushing a pre-cleaned laboratory-supplied stainless steel liner into the fresh surface. The samples were immediately covered with Teflon® tape and tight-fitting end caps, labeled, and stored in a pre-chilled insulated container pending laboratory analysis.

The samples were collected on September 14, 1998 and submitted to Chromalab, Inc., on September 15, 1998. The samples were each analyzed for TPHg and BTEX by EPA Method SW846 8020A Nov 1990/8015Mod, lead by EPA Method 3050A/7420A, and halogenated volatile organics (8010 compounds) by EPA Method 8240A Nov 1990. In addition, sample SP-1,2,3,4 was analyzed for (TCLP) lead by EPA Method 3010A/7420A, soluble threshold limit concentration (STLC) by EPA Method 3005A/7420A, and reactivity, corrosivity, and ignitability (RCI) by California Title 22 Section 66261.21-.24. An additional composite sample taken from soil in Stockpile 1,2,3,4 was analyzed for lead on November 6, 1998 for verification of elevated lead levels.

Two composite soil samples (2SP-1,2,3,4 and 2SP-5,6,7,8) were collected from the stockpile material on September 28, 1998 and submitted to Chromalab for analysis of total lead. Laboratory results are summarized in Tables 3 and 4. A copy of the analytical results and chain of custody record is included as Appendix 3.

Results of the stockpiled soil sample analysis indicted no detectable concentrations of TPHg, BTEX, or volatile organics. Minor concentrations of lead were detected in all of the stockpile samples. A concentration of 230 ppm of total lead and 6.5 ppb of soluble lead was detected in sample SP-1,2,3,4. Additional sampling performed to verify lead levels indicated a concentration of 40 ppm in Stockpile 1,2,3,4. Based on the sample results, the stockpiled material was accepted into Forward Incorporated landfill, Stockton, California. A total of 333 tons of soil was delivered to Forward Incorporated for disposal. A copy of the manifest and weight tags are included in Appendix 2.

TABLE 3 - STOCKPILE SOIL SAMPLE ANALYTICAL RESULTS

Sample ID	Date Sampled	TPHg (mg/kg)	Benzene (mg/kg)	Toluene (mg/kg)	Ethyl-benzene (mg/kg)	Total Xylenes (mg/kg)	8010 Compounds (mg/kg)

4.4 Water Treatment

As part of remedial action, a temporary extraction well was installed within the northwestern corner of the excavation to a depth of 12 feet bgs. Water from the excavation was pumped into a 20,000-gallon holding tank. From the holding tank, water was treated using activated carbon and discharged into the sanitary sewer. The water treatment process was approved by the East Bay Municipal Utility District in their permit number 5039069, included in Appendix 1. In accordance with the permit, prior to each "batch" discharge, ACC collected one water sample from the discharge point to evaluate the effectiveness of the activated carbon treatment. Samples collected from the discharge point were collected directly from the port once the port was opened and drained for approximately 30 seconds prior to collection. Upon collection, the water was immediately poured into laboratory supplied vials and bottles, capped and the vials were inverted to check for air bubbles. The water samples were then labeled and stored in a pre-chilled insulated container pending analysis.

In accordance with permit requirements, this sample was analyzed for lead by EPA Method 3010A/3050A/6010A Nov 1990, volatile organics by EPA Method SW846 8240A Nov 1990, and TPHg and BTEX by EPA Method SW846 8020A Nov 1990/8015Mod. In addition, prior to discharge, water was collected from the excavation pit (2X98PIT) and from the holding tank once water was pumped from the excavation to the tank (BAKER 1). These samples were analyzed for TEPH by EPA Method 8015 Modified. Analytical results of the water samples are summarized in Tables 5 and 6. A copy of the analytical results and chain of custody record is included as Appendix 3.

Discharge of treated wastewater began on September 28, 1998 and was completed on October 29, 1998. Approximately 100,000 gallons of water were treated and discharged. The discharge rate was approximately 10 gallons per minute or a maximum of 14,400 gallons per day. Treated water samples are designated with the "TW" prefix.

TABLE 5 - GROUNDWATER ANALYTICAL RESULTS (TEPH)

Sample ID	Date Sampled	Kerosene (µg/kg)	Diesel (µg/kg)	Motor Oil (µg/kg)	Lead (µg/kg)	8240 Compounds (µg/kg)
2X98PIT	09/04/98	< 50	11,000*	7,400	---	---
BAKER 1	09/09/98	< 50	1,800	< 500	---	---
TW	09/15/98	---	< 50	---	---	---
TW-1	09/22/98	---	---	---	< 0.005	---
TW-2	09/22/98	---	---	---	---	690(b)
	10/23/98	---	---	---	< 0.005	74(b), 0.94(c)
TW-3	10/23/98	---	---	---	< 0.005	ND

Notes: mg/kg = milligrams per kilogram = ppm

*Hydrocarbon reported is in the early diesel range and does not match the laboratory's diesel standard

b = 2-butanone detected

c = carbon disulfide detected

ND = none of the 8240 analytes were detected

TABLE 6 - GROUNDWATER SAMPLE ANALYTICAL RESULTS (TPHg, BTEX, MTBE)

Sample ID	Date Sampled	TPHg (µg/kg)	Benzene (µg/kg)	Toluene (µg/kg)	Ethyl-benzene (µg/kg)	Total Xylenes (µg/kg)	MTBE (µg/kg)
2X98PIT	09/04/98	< 50	40	25	48	36	< 5.0
BAKER 1	09/09/98	2,600	57	39	21	97	< 5.0
TW	09/15/98	< 50	< 0.50	< 0.50	< 0.50	< 0.50	< 5.0

Notes: mg/kg = milligrams per kilogram = ppm

4.5 Backfilling

After completion of excavation, the excavations were backfilled with 1.5-inch drain rock to approximately one foot above the water level. Above the drain rock clean Class II backfill material was added and compacted. Upon completion of water extraction and treatment, the temporary

extraction well was removed from the excavation. The hole was backfilled with neat cement and a six-inch thick concrete slab was poured over the excavation.

5.0 DISCUSSION

Remedial work as UST removal and overexcavation of impacted soil around the former UST and former monitoring well MW-3 was performed to the extent feasible. In addition, as part of the remedial action, a total of 100,000 gallons of water was extracted from the excavation and treated. All accessible impacted material was removed during the remedial action. Soil not removed during this remedial action was left in place due to proximity to subsurface utilities.

Based on soil sampling performed during the remedial action, low concentrations of residual impact to the shallow soil remain in the near vicinity of the former tank excavation. Concentrations of TEPH as diesel detected were all identified by the laboratory as not matching the diesel standard, indicating that they are likely remnant concentrations of degraded diesel or motor oil.

6.0 SUMMARY AND CONCLUSIONS

Interim remedial action included source removal and excavation of approximately 2,209 tons of impacted soil and treatment of approximately 100,000 gallons of water. With the removal of the UST and impacted soil and groundwater, recoverable sources have been removed. Petroleum hydrocarbon residues not removed through excavation should degrade naturally with time. Based on the findings, observations, and analytical results of verification soil samples, no further investigation with regards to the extent of soil impact is warranted. ACC anticipates that residual groundwater impact should degrade over time.

7.0 REQUEST FOR REGULATORY SITE CLOSURE

On behalf of the responsible party, Peralta Community College District, ACC formally requests that the site be evaluated for regulatory site closure based on the following:

- Ongoing site investigation and remediation activity have demonstrated: 1) source removal has been performed to the extent feasible; 2) a predictable, minor plume of impacted groundwater exists immediately adjacent to the former USTs but is not migrating due to the flat gradient and natural attenuation processes; 3) fluctuating concentrations of dissolved-phase gasoline and decreasing concentrations of BTEX constituents have been reported; and 4) the first encountered water bearing zone contains relatively poor quality water and is not a current or likely future source of potable water;
- No water wells, deeper drinking water aquifers, surface water, or other sensitive receptors are reported to be impacted, nor likely to be impacted in the future, and no receptors are in the downgradient direction within 300 feet;
- The subject property and the area downgradient of the subject property are primarily zoned for commercial to light industrial use;

- The site presents no significant risk to human health and the environment due to the low concentrations of benzene (less than 0.05 ppb in the last 6 months); and
- Based on demonstrated natural attenuation processes, concentrations of gasoline constituents should continue to decrease below reportable levels before any further, appreciable downgradient migration can occur.

8.0 LIMITATIONS

The service performed by ACC has been conducted in a manner consistent with the levels of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the area. No other warranty, expressed or implied, is made.

The conclusions presented in this report are professional opinions based on the indicated data described in this report and applicable regulations and guidelines currently in place. They are intended only for the purpose, site, and project indicated. Opinions and recommendations presented herein apply to site conditions existing at the time of our study.

ACC has included analytical results from a state-certified laboratory, which performs analyses according to procedures suggested by the U.S. Environmental Protection Agency and the State of California. ACC is not responsible for laboratory errors in procedure or result reporting.

Attention: Mr. Jim Quinley

Subject: Suitability of Borrow Material

Gentlemen:

As requested, we have observed and tested a sample of fill material obtained from La Vista Quarry for use as backfill material at the subject site.

Based on our observation and Atterberg Limits tests, the material is classified as light brown non-plastic, non-expansive sand-silt mixture with fine gravel. As such, the soil tested is suitable for use as backfill material.

If you have questions, please contact us.

Respectfully submitted,
BSK & Associates

Dear Mr. Mibach:

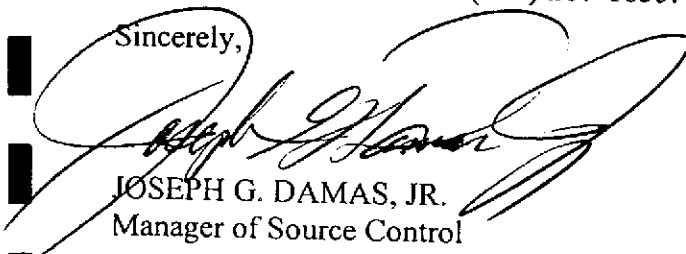

Re: Wastewater Discharge Permit No. 5039069 1

Enclosed is the Wastewater Discharge Permit for the Peralta Community College District groundwater discharge located at 501 5th Avenue, Oakland, CA, effective July 1, 1998, through June 30, 1999. Please read the Terms and Conditions and Standard Provisions and Reporting Requirements attached to the permit. As a permit holder, you are legally responsible for complying with all permit conditions and requirements.

Peralta Community College District shall report to the EBMUD Source Control Division any changes, permanent or temporary, to the premises or operations that significantly affect the quality or volume of wastewater discharge or deviate from the Terms and Conditions under which the permit was granted.

If you have any questions regarding this Permit, please contact Raymond A. Maxwell of the Source Control Division at (510) 287-1655.

Sincerely,

JOSEPH G. DAMAS, JR.
Manager of Source Control

WASTEWATER DISCHARGE PERMIT

Terms and Conditions

Peralta Community College District
Permit Number: 5039069 1
Page No. 1

GENERAL CONDITIONS

- I. Peralta Community College District shall minimize the discharge of pollutants to the community sewer by reclaiming groundwater and utilizing technically and economically feasible treatment methods described in the Permit Application. Title I, Section 5 of EBMUD Ordinance No. 311 prohibits the discharge of groundwater to the community sewer. This Permit to discharge groundwater is considered a waiver of the prohibition.
- II. Peralta Community College District shall discharge treated groundwater to the side sewer only from the facility located at 501 5th Avenue, Oakland, CA.
- III. Peralta Community College District shall immediately cease discharge of treated groundwater if not in compliance with any of the Terms and Conditions of this Permit.
- IV. Peralta Community College District shall comply with all items of the attached *Standard Provisions and Reporting Requirements, 7/96 Revision*.

COMPLIANCE REQUIREMENTS

- I. Peralta Community College District shall pretreat all groundwater prior to discharging to the side sewer located at 501 5th Avenue, Oakland, CA. Pretreatment shall consist of processes depicted in the *Excavation Groundwater Treatment System Schematic, 501 5th Avenue, Oakland, CA*

REPORTING REQUIREMENTS

- I. Peralta Community College District shall submit a technical report describing anticipated discharge. The report shall notify EBMUD Source Control Division five working days prior to any anticipated discharge from the groundwater treatment system.

The report shall include estimated discharge volume and the date the discharge will occur.

The technical report shall be sent by facsimile, five working days prior to the discharge, to the EBMUD Source Control Division at (510) 287-0621, attention Mr. Raymond Maxwell.

WASTEWATER DISCHARGE PERMIT

Terms and Conditions

Peralta Community College District
Permit Number: 5039069 1
Page No. 2

SELF-MONITORING REPORTING REQUIREMENTS

- I. Peralta Community College District shall obtain representative samples of the groundwater discharge. The sampling shall be performed on the dates, at locations, and for parameters specified below.
- II. Peralta Community College District shall comply with the "Reporting and Record Keeping" and "Monitoring and Sampling" requirements found in *Standard Provisions and Reporting Requirements, 7/96 Revision, Sections B and C.*
- III. Peralta Community College District shall submit Self-monitoring Reports. The Self-monitoring Reports shall contain:
 - A. Laboratory results.
 - B. Chain of custody documentation.
 - C. Volume of groundwater pumped each month and total volume pumped to date.
 - D. Signatory requirements.

Self-monitoring reports shall be submitted within thirty days of sampling.

- IV. Peralta Community College District shall sample groundwater discharge from Process Sampling Point No. 1 (PSP No. 1). PSP No. 1 shall be the sample port which is located after the final carbon adsorber and designated as "PSP No. 1" on the Schematic Flow Diagram labeled *Excavation Groundwater Treatment System Schematic, 501 5th Avenue, Oakland, CA*
- V. Peralta Community College District shall collect and analyze samples from PSP No. 1 according to the following schedule:
 - A. One sample of the first discharge. ¹
 - B. One sample after each 50,000 gallons discharged thereafter.

¹ Laboratory results are to be available within 48 hours of sample collection and sent by facsimile to EBMUD Source Control Division at (510) 287-0621, attention Mr. Raymond Maxwell.

- VI. Peralta Community College District shall collect and analyze samples for the following parameters according to approved test methods listed in *Standard Provisions and Reporting Requirements, 7/96 Revision, Section C. III.*

Parameter	Sample Type	Method
Purgeable Organics	grab	EPA 624
Lead - Total	grab	SM 3113B

SD-30.7 2/91

Page No. 3

WASTEWATER DISCHARGE LIMITATIONS

- I. Peralta Community College District shall comply with the EBMUD Wastewater Control Ordinance and all applicable rules and regulations.
- II. Peralta Community College District shall not discharge groundwater into the community sewer if the strength of the groundwater exceeds the following:

Regulated Parameter	Daily Maximum
Benzene	5 ug/L
Ethylbenzene	5 ug/L
Toluene	5 ug/L
Xylenes	5 ug/L
Lead - Total	5 ug/L

MONITORING and TESTING CHARGES

EBMUD inspection frequency, parameters testing, and charges for Peralta Community College District are outlined in the tables below.

EBMUD Monitoring		
Inspections per Year	Charge per Inspection	Charge per Year
1	\$540.00	\$540.00

EBMUD Testing			
Parameter	Analyses per Year	Charge per Analysis	Charge per Year
EPA 624	1	\$179.00	\$179.00
Lead - SM 3113B	1	\$43.00	\$43.00

Total EBMUD Monitoring and Testing Charges	
Charge per Year	\$762.00
Charge per Month	\$63.50

WASTEWATER DISPOSAL CHARGE

All wastewater discharged by Peralta Community College District will be charged for treatment and disposal service at the unit rate measured for other carbon treated groundwater discharges. The charge per month equals the unit rate times the discharge volume.

Disposal Charges	
Unit Rate	0.42 \$/Ccf
Total Discharge Volume	134 Ccf
Charge per Month	\$4.69

WASTEWATER DISCHARGE PERMIT

Terms and Conditions

Peralta Community College District
Permit Number: 5039069 1
Page No. 5

WASTEWATER CAPACITY FEE

The capacity fee for the Peralta Community College District facility located at 501 5th Avenue, Oakland, CA is calculated by multiplying the maximum monthly wastewater discharge volume by the capacity rate in effect at start-up.¹ Each month, 1/12 of the total capacity fee will be charged, until the entire fee has been paid in one year.

Wastewater Capacity Fee	
Maximum Monthly Discharge Volume	44.6 Ccf
Capacity Fee Rate	48.76 \$/Ccf-month
Total Capacity Fee	\$ 181.22
Monthly Capacity Fee	\$ 15.10

¹ Total capacity fees are normally prorated over a 36-month period. Discharge will occur over a three-month time frame for this one-year Permit. Therefore, the total capacity fee will be 3/36^{ths} of the calculated amount.

WASTEWATER DISCHARGE PERMIT

Terms and Conditions

Peralta Community College District
Permit Number: 5039069 1
Page No. 6

FEES AND WASTEWATER CHARGES

The following fees and charges for Peralta Community College District are due when billed by the District:

Permit Fee	\$2,490.00
Monthly Monitoring and Testing Charge	\$63.50
Monthly Wastewater Disposal Charge	\$4.69
Monthly Wastewater Capacity Fee	\$15.10
Total Monthly Charges	\$83.29

The District may change the terms and conditions of a Wastewater Discharge Permit, including changing the average limits on the elements of wastewater strength and rates and charges, from time to time as circumstances may require. The District shall allow a discharger reasonable time to comply with any District required changes in the permit except that a change in average limits of wastewater strength shall immediately affect calculation of the wastewater disposal charge.

Charges listed in this Permit will be assessed on EBMUD bills in accordance with the EBMUD Meter Reading Schedule.

STANDARD PROVISIONS AND REPORTING REQUIREMENTS (SPARR)

The SPARR contains general stipulations, reporting and sampling requirements that are common to Wastewater Discharge Permits issued by the District. The SPARR are included as enforceable terms and conditions of the permit, pursuant to EBMUD Ordinance No. 311 (Ordinance 311). The Permit Holder shall reference Ordinance 311 in addition to the Wastewater Discharge Permit and SPARR.

SECTION A. GENERAL PROVISIONS 1

- Terms and Conditions of Permit 1
- Disposal of Hazardous Waste 1
- Dilution Prohibition 1
- Bypass of Treatment Facilities 1
- Calibration and Maintenance of Equipment 1
- Closure Plan 1
- Severability 2
- Transfer of Permit Prohibited 2
- Availability of Permit 2

SECTION B. REPORTING AND RECORD KEEPING 2

- Spill or Slug Discharge Notification 2
- Twenty-four Hour Violation Reporting 2
- Changes in Quantity and Quality of Wastewater 2
- Hazardous Waste Notification 2
- Signatory Requirements 3
- Retention of Records 3

SECTION C. MONITORING AND SAMPLING 3

- Representative Sampling 3
- Chain of Custody 3
- Sample Preservation and Analytical Methods 4
- Laboratory Results 6
- Flow Measurements 6

SECTION D. ENFORCEMENT AND PENALTIES 6

- Annual Publication 6
- Penalties for Violations of Permit Conditions 6

SECTION E. DEFINITIONS 6

SECTION A. GENERAL PROVISIONS

I. Terms and Conditions of Permit

This Wastewater Discharge Permit is issued pursuant to Ordinance 311 and EBMUD resolutions setting rates and charges, unless specifically approved by the Director. Applications for permit renewal shall be submitted to the District at a minimum of 60 days prior to expiration.

II. Disposal of Hazardous Waste

The disposal of hazardous waste by the Permit Holder shall be in accordance with all local, State and Federal laws and regulations applicable to such matters.

III. Dilution Prohibition

The Permit Holder shall not increase the use of process water, or in any other way dilute the process discharge or hazardous waste, as a substitute for treatment, to achieve compliance.

IV. Bypass of Treatment Facilities

The Permit Holder shall not bypass treatment facilities unless:

- a. The bypass was unavoidable to prevent loss of life, personal injury, or severe property damage. (Severe property damage means substantial physical damage to property, damage to the treatment facilities that causes them to become inoperable, or substantial and permanent loss of natural resources that can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.);
- b. There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgement to prevent a bypass which occurred during normal periods of equipment downtime or preventative maintenance;
- c. The Permit Holder submitted advance notice of the need for a bypass to the District. If the Permit Holder knows in advance of the need for a bypass, it shall submit prior notice, if possible at least 10 days before the date of the bypass.

The Permit Holder shall submit notice of an unanticipated bypass as required in Section B, Paragraph II. Twenty-four Hour Violation Reporting.

V. Calibration and Maintenance of Equipment

All flow measurement, discharge sampling, process monitoring, and treatment equipment shall be periodically calibrated, inspected and maintained to ensure their accuracy and reliability.

VI. Closure Plan

Permit Holders that intend to close a facility or cease a regulated process shall provide a written closure plan at least 90 days prior to closing or immediately, when intent to close becomes known less than 90 days prior to closing.

The plan shall include the following:

- a. Date of proposed work or production stoppage;
- b. Date of proposed final closure (after cleaning and demobilizing activities are complete);
- c. All chemical and container consolidation activities and raw material and waste inventory. The inventory shall include, but is not limited to all barrels, plating tanks, and miscellaneous chemicals and containers. Consolidation activities include, but are not limited to container marking, chemical sampling and analysis, and waste treatment;
- d. Description of cleaning activities involving hazardous materials;
- e. Description of methods of disposing of all inventoried items.

STANDARD PROVISIONS AND REPORTING REQUIREMENTS

V. Signatory Requirements

All applications, reports, or information requested by the Director, shall be signed by a duly authorized representative and must contain the following certification statement:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

VI. Retention of Records

- a. The Permit Holder shall retain all records of monitoring information, including calibration and maintenance records, original strip chart recordings for continuous monitoring instrumentation, copies of reports required by this Permit, and records used to complete the application for this Permit, for a period of at least three years from the date of the sample, measurement, report or application. This period may be extended by request of the Director at any time.
- b. All records that pertain to matters that are the subject of special orders or any other enforcement or litigation activities brought by the District shall be retained and preserved by the Permit Holder until all enforcement activities have concluded and all periods of limitation with respect to any and all appeals have expired.

SECTION C. MONITORING AND SAMPLING

I. Representative Sampling

Samples and measurements taken, as required in this Permit, shall be representative of the volume and nature of the monitored discharge.

II. Chain of Custody

- a. For each sample, a Chain of Custody shall document:
 1. The location, the type of sample (grab or composite), the date(s) and time, or span of time the samples were taken;
 2. The number of container(s), and type (glass, plastic, vial, etc.);
 3. Preservation techniques (ice, refrigeration at 4 °C, chemicals added, etc.);
 4. Sampler's name, legibly written;
 5. Sample ID number (to cross reference with the sample ID number on the Laboratory results);
 6. All persons handling the sample and the individual receiving the sample at the laboratory, including their signature, printed name, company, date and time the sample was relinquished and accepted.
- b. If a sample is transported or handled by a courier, delivery service (public or private) or shipper, indicate the company or individual's name and the method of packaging the samples on Chain of Custody.
- c. Analyses performed in the Field shall be indicated as such on the Chain of Custody (e.g. pH - field test).
- d. If the Chain of Custody submitted with a Self-Monitoring Report is incomplete, the Report may be construed as incomplete and the sampling shall be repeated.

STANDARD PROVISIONS AND REPORTING REQUIREMENTS

Parameter	Preservative	Maximum Hold Time	EPA Method	STD Methods* 18 th Ed.
Nickel (Total)	HNO ₃ to pH <2 Cool to 4°C	6 months	249.1 249.2 200.7	3111 B or C 3113 B 3120 B
Oil & Grease (Total) Oil & Grease (HC)	H ₂ SO ₄ to pH <2 Cool to 4°C	28 days	413.1 418.1 (IR)	5520-B 5520-F
Phenolic Compounds	H ₂ SO ₄ to pH <2 Cool to 4°C	24 days	420.1 420.2	5530-D
pH, Hydrogen Ion	None	Analyze immediately	150.1	4500-H + B
Silver (Total)	HNO ₃ to pH <2 Cool to 4°C	6 months	272.1 272.2 200.7	3111 B or C 3113 B 3120 B
Temperature (°C)	None	Analyze immediately	170.1	2550-B
Total Suspended Solids, TSS, filtered with Whatman 934 AH Glass Microfiber filter, or equivalent	Cool to 4°C	7 days	160.2	2540-D
Zinc (Total)	HNO ₃ to pH <2 Cool to 4°C	6 months	289.1 289.2 200.7	3111 B or C
Organochlorine Pesticides & Poly Chlorinated Biphenyls (PCBs)	Cool to 4°C	7 days until extraction; 40 days after extraction	608	6630 B & C
Purgeable Organics (BTEX)	HCl to pH <2, add ascorbic acid if Cl ₂ is present. VOA vials, No headspace. Cool to 4°C	14 days	624, 602 8020	6210 B
Semi-Volatile Organics (BNA's)	Cool to 4°C	7 days until extraction; 40 days after extraction	625	6410 B
Total Identifiable Chlorinated Hydrocarbon (Volatile Organics)	HCl to pH <2, add ascorbic acid if Cl ₂ is present. VOA vials, No headspace. Cool to 4°C	14 days	624	6210 B
Total Petroleum Hydrocarbon (TPH)	Cool to 4°C	14 days	8015	-----

* Standard Methods For The Examination of Water and Wastewater

STANDARD PROVISIONS AND REPORTING REQUIREMENTS

- b. A general partner or proprietor if the Permit Holder is a partnership or sole proprietorship, respectively.
- c. A person having overall responsibility for operation of the regulated facility, if the Permit Holder is a public agency, including the State of California or the United States of America.
- d. A representative of the individual designated in paragraph (a), (b) or (c) if:
The authorization is made in writing by the individual described in paragraph (a), (b) or (c) and submitted to the District, and the authorization specifies either an individual or a position having responsibility for the overall operation of the facility from which the wastewater discharge originates, such as the position of plant manager, a field superintendent, or a position of equivalent responsibility, or an individual or a position having overall responsibility for environmental matters for the facility.

If an authorization under paragraph (d) is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, or overall responsibility for the environmental matters for the company, a new authorization satisfying the requirements of paragraph (d) must be submitted to the District prior to or together with any reports to be signed by an authorized representative.

VI. Hazardous Waste - Listed and characterized wastes under the Section 3001 of the Resource Conservation and Recovery Act (RCRA), as described in the Code of Federal Regulations (40 CFR Part 261) or as defined in California Health and Safety Code Section 25117.

VII. Limits

Average limitations (monthly and 4-day), the monthly average is the arithmetic average value of all samples taken in a calendar month. A 4-day average is the arithmetic average value of 4 valid consecutive samples collected by the District and the Permit Holder.

Maximum limitations - The maximum concentration of a pollutant allowed to be discharged at any time, as determined from the analysis of a grab or composite sample.

VIII. Permit Holder - Any person issued a Wastewater Discharge Permit.

IX. Samples

Grab - an individual sample collected in a short period of time not exceeding fifteen minutes.

Composite - Samples consisting of a number of discrete aliquots combined into a single sample, representative of a period of time.

X. Significant Noncompliance - A Person is in significant noncompliance (SNC) if its violation meets one or more of the following criteria:

- a. Chronic violations of wastewater discharge limits, defined as those in which sixty-six percent or more of all of the measurements taken during a six-month period exceed (by any magnitude) the daily maximum limit or the average limit for the same pollutant parameter.
- b. Technical Review Criteria (TRC) violations, defined as those in which thirty-three percent or more of all of the measurements for each pollutant parameter taken during a six-month period equal or exceed the product of the daily maximum limit or the average limit multiplied by the applicable TRC.
TRC = 1.4 for Oil and Grease.
TRC = 1.2 for all other pollutants (except pH).
- c. Any discharge of a pollutant that has caused imminent endangerment to human health, welfare or to the environment or has resulted in the exercise of emergency authority.
- d. Failure to meet, within 90 days after the schedule date, a compliance schedule milestone contained in a Wastewater Discharge Permit or Manager's Order for starting construction, completing construction, or attaining final compliance.
- e. Failure to provide, within 30 days after the due date, required reports such as baseline monitoring reports, 90-day compliance reports, periodic self monitoring reports, and reports on compliance with compliance schedules.
- f. Failure to accurately report noncompliance.
- g. Any other violation or group of violations of discharge prohibitions of Section A, II.

Forward shall have no obligation to accept the waste if weather or other conditions impair the safe and effective disposal of the waste or if the waste impairs the safe and effective operation of the Landfill. Forward shall use reasonable efforts to promptly notify Disposer of its inability to accept the waste for any reason. If Forward's refusal to accept the waste is based on weather or other site conditions, Forward shall notify the Disposer when site conditions are expected to change such that Forward will be able to accept the waste.
