Krista,

Yes the site is still open, but is not very active due to Responsible Party problems. Contaminants are petroleum hydrocarbons, and some chlorinated solvents that are presumed to be from the former waste oil UST at the site. My latest information is that an interim remedial action will be proposed once the RP problems are resolved.

Let me know if you have other questions.

**Subject:** Monitoring Wells in 23rd Ave, Oakland

Hi Mark,

I'm looking for some information regarding potential soil contamination for a location in Oakland. EBMUD will be replacing a water main in the 23<sup>rd</sup> Avenue cul-de-sac in Oakland, adjacent to 2301 East 12<sup>th</sup> Street (the Discount Brakes and Tires business shop). During a site visit of 23<sup>rd</sup> Avenue, I observed some monitoring wells in the cul-de-sac. I'm trying to determine whether these wells are still being used and what they are monitoring, because the pipe material used for our water main will be dependent on whether the soil is contaminated.

I contacted Alameda County to obtain more information about this monitoring well, and I was directed to the Geotracker website (Environmental Data for Regulated Facilities). I found some information regarding contamination concerns for the 2301 East 12<sup>th</sup> Street address, and you are listed as the County's caseworker for this location. Can you confirm whether these wells are still being monitored for contaminants and provide any other relevant information?

Thanks very much.

Regards,  
Krista Moita
