Mr. Michael Whelan
Environmental Engineer
ARCO Products Company
P.O. Box 5811
San Mateo, California 94402

Subject: Letter Report on Quarterly Groundwater Monitoring Report for Third Quarter 1993 at ARCO Station 6113, 785 East Stanley Boulevard, Livermore, California.

Mr. Whelan:

As requested by ARCO Products Company (ARCO), RESNA Industries Inc. (RESNA) has prepared this letter report summarizing the results of third quarter 1993 groundwater monitoring performed by ARCO's contractor, EMCON Associates (EMCON) of San Jose, California, at the above-referenced site. The operating ARCO Station 6113 is located on the southwestern corner of the intersection of East Stanley and Murrieta Boulevards in Livermore, California, as shown on Plate 1, Site Vicinity Map. The locations of the groundwater monitoring wells, borings, and pertinent site features are shown on Plate 2, Generalized Site Plan. Previous work is discussed in the previous subsurface investigations listed in the Reference section.

The purpose of this quarterly groundwater monitoring event is to evaluate changes in the groundwater flow direction and gradient, and changes in concentrations of petroleum hydrocarbons in the local groundwater associated with a former waste-oil and gasoline underground-storage tanks (USTs) at the site. Monthly monitoring (depth-to-water measurements and subjective analyses) has been reduced to quarterly monitoring and sampling. The reduced monitoring is in response to a relatively stable groundwater gradient and flow direction. The field work and laboratory analyses of groundwater samples during this quarter were performed under the direction of EMCON and included measuring depths to groundwater, subjectively analyzing groundwater for the presence of petroleum product, collecting groundwater samples from the wells for laboratory analyses, and directing a State-certified laboratory to analyze the groundwater samples. Field procedures and acquisition of field data were performed under the direction of EMCON. RESNA's scope of work was limited to interpretation of field and laboratory analytical data, which included evaluating

Quarterly Groundwater Monitoring
ARCO Station 6113, 785 East Stanley Boulevard, Livermore, CA

December 30, 1993
69028.08

trends in reported hydrocarbon concentrations in the local groundwater, the groundwater gradient, and direction of groundwater flow beneath the site.

Groundwater Sampling and Gradient Evaluation

Depth to water levels (DTW) were measured on July 27 and August 30, 1993. Quarterly sampling was performed on August 30 and September 1, 1993. Results of EMCON's field work on the site, including DTW levels and subjective analyses for the presence of product in the wells, are presented on EMCON's Field Reports, Water Sample Field Data Sheets, and Summary of Groundwater Monitoring Data (Appendix A). Cumulative Groundwater Monitoring Data is summarized in Table 1.

The DTW levels, wellhead elevations, groundwater elevations, and subjective observations of product in the groundwater for this and previous quarterly groundwater monitoring events at the site are summarized in Table 1, Cumulative Groundwater Monitoring Data. The presence of floating product was noted in well MW-6 during the August 1993 field event (see EMCON's Field Reports, Appendix A). No visual evidence of floating product or hydrocarbon sheen was observed in the other wells during this quarter. Groundwater elevations in onsite wells fell an average of approximately 1.5 feet since June 1993.

EMCON's DTW levels were used to evaluate groundwater gradient and flow direction. Graphical interpretations of the groundwater gradients and flow directions for July 27 and August 30, 1993, are shown respectively on Plates 3 and 4, Groundwater Gradient Maps. These maps show a flow direction toward the north in July and August with an average gradient of approximately 0.03 ft/ft, which is consistent with results from the previous quarter.

Groundwater monitoring wells MW-1 through MW-4 and MW-7 through MW-12 were purged and sampled by EMCON field personnel on August 30 and September 1, 1993. Groundwater monitoring well MW-5 was not sampled because the well box was inaccessible. Well MW-6 was not sampled because floating product was present. According to ARCO, the purge water was removed from the site by a licensed hazardous waste hauler.

Laboratory Methods and Results

Under the direction of EMCON, water samples collected from the wells were analyzed by Columbia Analytical Services, Inc., located in San Jose, California (California Hazardous Waste Testing Laboratory Certification No. 1426). The water samples from MW-1 through MW-4 and MW-7 through MW-12 were analyzed for total petroleum hydrocarbons as

Quarterly Groundwater Monitoring

ARCO Station 6113, 785 East Stanley Boulevard, Livermore, CA

December 30, 1993

69028.08

gasoline (TPHg) and benzene, toluene, ethylbenzene, and total xylenes (BTEX) using modified Environmental Protection Agency (EPA) Methods 8020/5030/California DHS LUFT Method. In addition, the water samples from MW-1 were analyzed for total oil and grease (TOG) using EPA Standard Method 5520 C/F.

The following general trends were noted in reported hydrocarbon concentrations in groundwater beneath the site since last quarter. Concentrations of TPHg and BTEX remained less than the listed method detection limits in wells MW-1 MW-2, MW-8, MW-9, MW-11, and MW-12 and decreased in wells MW-3, MW-4, MW-7, and MW-10. Groundwater monitoring well MW-6 continued to contain floating product. Concentrations of TPHg and benzene in the groundwater are shown on Plate 5, TPHg Concentrations in Groundwater, and Plate 6, Benzene Concentrations in Groundwater. The highest TPHg and benzene concentrations in groundwater appear to be adjacent and immediately downgradient (to the west and north) of the existing gasoline USTs, situated in the northeastern portion of the site.

The extent of gasoline hydrocarbons in the groundwater appears to be delineated to less than 50 ppb TPHg in the central and southern portions of the site. TOG was reported in well MW-1 at a concentration of 900 and 700 ppb, respectively for the laboratory method used. The Chain of Custody Records and Laboratory Analyses Reports are attached in Appendix A. Results of these and previous water analyses are summarized in Table 2, Cumulative Results of Laboratory Analyses of Groundwater Samples--TPHg and BTEX, and Table 3, Cumulative Results of Laboratory Analyses of Groundwater Samples--VOCs, TPHd, TOG, and Metals.

07/27/93		20.94	434.10	None
08/30/93		21.79	433.25	None

For MW-1 through MW-3 (surveyed by Ron Archer in October 1988) and MW-4 (surveyed by Ron Archer in February 1991) wellhead elevation based on benchmark: Top of pin set in concrete in the most westerly monument at the intersection of East Stanley Boulevard and Fenton Avenue. Elevation taken as 455.896 mean sea level. City of Livermore Datum.

For MW-4 through MW-9 (surveyed by John Koch in June 1992) and MW-10 through MW-12 (surveyed by John Koch in April 1993) wellhead elevation based on benchmark: Top of pin in standard monument, at intersection of El Rancho Drive and Albatross Ave. Elevation taken as 448.218'. City of Livermore Datum.

Measurements in feet.

* Residual water.

**Adjusted water level due to product. The recorded thickness of the floating product was multiplied by 0.80 to obtain an approximate value for the displacement of water by the floating product. This approximate displacement value was then subtracted from the measured depth to water as the corrected depth to water. These calculated groundwater depths were subtracted from surveyed wellhead elevations to obtain the differences in groundwater elevations.

MCLs	None	1.0	None	680	1,750
DWAL	None	None	100	None	None

Results in parts per billion (ppb). Benzene, toluene, ethylbenzene and total xylenes by EPA Method 5030/8020/DHS LUFT Method.
TPHg = Total petroleum hydrocarbons as gasoline by EPA Method 5030/8020/DHS LUFT Method.

< = Less than the detection limits shown.

MCLs = Adopted Maximum Contaminant Levels in Drinking Water, DHS (October 1990)

DWAL = Recommended Drinking Water Action Level, DHS (October 1990)

* = Laboratory reportedly raised detection limit due to matrix interference.

** = The sample contains components eluting in the gasoline range that were quantitated as gasoline. The chromatogram does not match the typical gasoline fingerprint.

Re: EMCON Project No. 0G70-038.01
ARCO Facility No. 6113

Dear Mr. Butera:

Attached are the results of the water samples submitted to our lab on September 1, 1993. For your reference, these analyses have been assigned our service request number SJ93-1082.

All analyses were performed consistent with our laboratory's quality assurance program. All results are intended to be considered in their entirety, and CAS is not responsible for use of less than the complete report. Results apply only to the samples analyzed.

Please call if you have any questions.

Respectfully submitted:
