RE: Results of Quarterly Groundwater Sampling at 1401 and 1421 Park Avenue  
December 10, 1996

Dear Susan:

Enclosed is one copy of the subject report which was prepared for Electro-Coatings by Geraghty & Miller Inc. The next sampling event is scheduled for March 1997.

We look forward to meeting with you on Friday, February 14, 1997.

Yours very truly,

Judy Garvens  
Administrative Manager

Ms. Judy Garvens  
Administrative Manager  
Electro-Coatings Inc.  
893 Carleton Street  
Berkeley, California 94710

**SUBJECT:** Quarterly Groundwater Sampling Results, Electro-Coatings Facility at 1401  
and 1421 Park Avenue, Emeryville, California.

Dear Ms. Garvens:

This letter presents the results of the quarterly groundwater sampling activities performed on behalf of ECI at the Electro-Coatings Inc. (ECI) site referenced above. The scope of work for the quarterly sampling was presented in the Geraghty & Miller letter dated August 27, 1996.

#### **FIELD ACTIVITIES AND LABORATORY ANALYSIS**

Monitoring Wells MW-3A, MW-4, MW-6, MW-12, MW-13, MW-16, and MW-17 were sampled on December 10, 1996 as part of the quarterly groundwater monitoring program. Prior to purging, depth to water and total well depth measurements were obtained from each well. The wells were then purged of at least three casing volumes of water. The well purging was accomplished using an aboveground diaphragm pump. New polyethylene tubing was used for each well. The purged water was monitored for temperature, pH, and specific conductance. A summary of the field data is presented in Table 1. Depth-to-water and groundwater elevation data are presented in Table 2.

Following purging, groundwater samples were collected using a new polyethylene bailer for each well. The water samples were collected into the appropriate USEPA-approved containers, placed on ice, and transported to Sequoia Analytical Laboratory in Walnut Creek, California, along with chain-of-custody documentation.

## RESULTS

### Depth to Water and Groundwater Elevations

Depth to water ranged from 3.19 feet below ground surface (Well MW-6) to 6.02 feet below ground surface (Well MW-13). A summary of depth to water and groundwater elevations is presented in Table 2. The groundwater elevations and a groundwater contour map are presented in Figure 1. Based on the depth to water data recorded on December 10 1996, the direction of groundwater flow is toward the west, which is consistent with the previous sampling event (Geraghty & Miller, October 9, 1996).

### Laboratory Analytical Results

#### *Chromium Results*

The historical and current analytical results for total and hexavalent chromium are summarized in Table 3 and the current results are presented in Figure 2. The laboratory reports that the total chromium results obtained during this sampling event are questionable due to lack of preservative in the sample bottles. However, the overall pattern is consistent with previous sampling events. The highest concentrations of both total and hexavalent chromium were detected in Monitoring Wells MW-13 and MW-17 on the ECI site and decreasing concentrations were detected with increased distance downgradient of the ECI site in Wells MW-6 and MW-16. Hexavalent chromium was not detected in the water samples collected from the deep well (MW-3A) sampled during this quarterly event while total chromium was detected at 13 micrograms per liter ( $\mu\text{g}/\text{L}$ ).

#### *Purgeable Halocarbon Results*

The historical and current analytical results for purgeable halocarbons are summarized in Table 4. Figure 3 presents the concentrations of trichloroethylene (TCE) and tetrachloroethylene (PCE) detected during the December 1996 sampling event. TCE, PCE, and trans-1,2-DCE were the most frequently detected halocarbons. TCE was the most frequently detected compound, and it was detected at the highest concentrations. The highest concentrations of TCE were detected in Monitoring Well MW-16, to the west of the ECI site. TCE was not detected in the farthest downgradient well (Well MW-6).

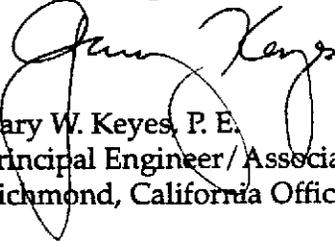

Geraghty & Miller appreciates the opportunity to be of service. If you have any questions regarding this report, please do not hesitate to call.

Sincerely,  
GERAGHTY & MILLER, INC.

NR - Not Reported

NA - Not Analyzed

(a) Analysis by USEPA Method 8010

(b) Denotes well that was part of the pilot study performed during August 1995 through February 1996.

ND( ) Not detected; laboratory method detection limit in parentheses.

TB-LB Trip blank-laboratory blank.

µg/L Micrograms per liter.

--- Not sampled.

**Please Note:**

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.

	Lab Number: 6120674-680	Reported: Jan 2, 1997

**LABORATORY NARRATIVE**

**EPA 200.7: Chromium**

Sample results are questionable due to lack of proper preservation of sample containers. Though the sample bottles were indicated by the client to contain preservative, the pH's of these samples fell within the neutral range.
